

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

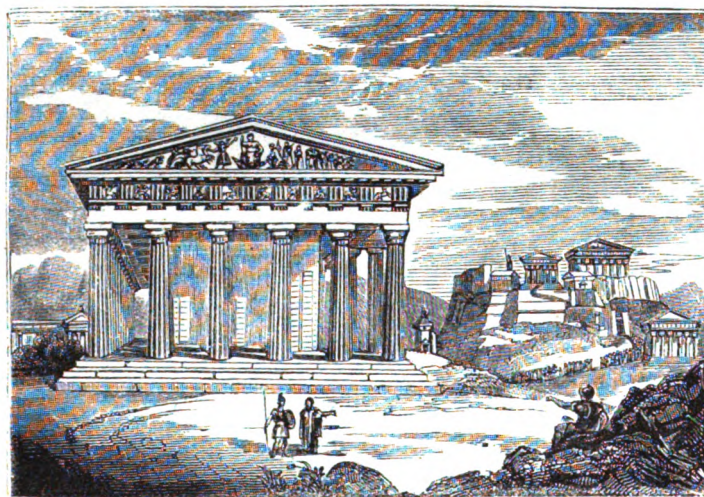

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1758.

LONDON, SATURDAY, JULY 6, 1861.

PRICE
FOURPENCE
Stamped Edition, 5d.

THE SOUTH LONDON MUSEUM.—By

permission of the Privy Council, the Trustees of the National Gallery, and the Commissioners of Patents. A CONVERSATION will be held, at the South Kensington Museum, on THURSDAY, July 11th, 1861, from Eight till Twelve. The Chair will be taken by the Right Hon. the EARL GRANVILLE, K.G., at half-past Nine, in the Theatre attached to the Museum. The whole of the Fine Arts Collections will be opened, and a superb Collection of Jewels, Diamonds, Gems, Antique and Modern Examples of Gold and Silversmiths' Work (many of which were at Ironmongers' Hall), will be exhibited by some of the City Companies, the Aldermen of the City of London, several learned Societies, &c. A Band will be in attendance, and Miss Helen Bliss will kindly officiate at the Piano-forte. Admission by tickets only. Single, 5s.; Double, to admit a Lady and Gentleman, or two Ladies, 7s. 6d.; or if purchased prior to July 11th, 3s. and 5s. These may be obtained of all the leading Print and Music sellers of the Metropolis at per small bills.

By order of the Committee,
EDGAR P. BROCK, } Hon.
T. S. DAVIS, } Secs.

ROYAL HORTICULTURAL SOCIETY.—

THE GREAT ROSE SHOW at South Kensington, WEDNESDAY NEXT, July 10. Tickets, 5s.; on the day, 7s. 6d. can be had of the principal Music-sellers and Librarians, and at the Gardens.

PROMENADE THIS DAY, and every WEDNESDAY and SATURDAY (except July 10). Public admitted on Saturdays, on payment of 3s. 6d.

NOTICE. A Ballot for Election of Fellows, Monday next, July 8.

ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN.

Patron.—H.R.H. THE PRINCE CONSORT, K.G.

THE ANNUAL MEETING will be held at PETERBOROUGH, July 23 to 30, under the Patronage of the Marquis of Exeter, K.G., the Lord Lieutenant of Northamptonshire, and the Lord Bishop of Peterborough. Programmes may be obtained at the Office of the Institute, 26, Suffolk-street, Pall Mall. A Museum of Antiquities, Works of Art, &c., will be formed, including a Special Series of Portraits of Mary Queen of Scots, and objects associated with her History.

T. WARWICK BROOKS, Secretary.

WELSH COLLEGIATE INSTITUTION, LLANDOVERY.

THOMAS PHILLIPS' FOUNDATION.

VACANCY OF THE OFFICE OF HEAD-MASTER OR WARDEN.

In consequence of the appointment of the Rev. E. Owen Phillips, M.A., to the Living of Llanbadarn-fawr, Aberystwyth, the Office of Head-Master or Warden of the above Institution is now vacant. The Head-Master must be a Clergyman of the Established Church, in full Orders, "thoroughly acquainted with the Welsh Language in its colloquial and literary use, and competent to impart a good sound classical and general Education, fitting for young men destined for any liberal profession, or scientific pursuit." He will be required to educate 30 Free Scholars on the Foundation, but will be allowed to take as many other Pupils as the School Premises can accommodate at a sum, for the Tuition of each, of not less than Eight Guineas per annum. He will be entitled to the yearly Endowment of 1381, and his Residence at the Institution, (wherein 300 Pupils and 60 Boarders can be accommodated) subject to a trifling annual Rent towards the Insurance and repairs. Liberal Salaries are provided for Three Under-Masters by the Foundation.

All applications, accompanied by references and certificates of ability and qualifications, should be addressed "To the Trustees of Thomas Phillips' Foundation, Llandoverly," not later than the 10th of July, 1861.

WELSH COLLEGIATE INSTITUTION, LLANDOVERY.

THOMAS PHILLIPS' FOUNDATION.

WANTED A MATHEMATICAL AND CLASSICAL MASTER, or either, one of whom only will be appointed, at a salary of 1500. per annum, and another MASTER to teach Physical Sciences, at a salary of 1250. per annum; both of whom will be required to assist in the business of the School generally.

All applications, accompanied by references and certificates of ability and qualifications, should be addressed "To the Trustees of Thomas Phillips' Foundation, Llandoverly," not later than the 10th of July, 1861.

UNIVERSITY OF EDINBURGH.

MEDICAL AND SURGICAL DEGREES.

The Secretary of State for War has intimated to the Senatus that the Double Degree of Bachelor of Medicine and Master of Surgery of this University will qualify for the Medical Service of the Army. The same Degree suffices for any other public Medical Service in the Country.

31st June, 1861. ALEXANDER SMITH, Secretary.

UNIVERSITY OF EDINBURGH.

PRELIMINARY EXAMINATION FOR MEDICAL STUDENTS.

THE SUBJECTS required for the PRELIMINARY EXAMINATIONS OF MEDICAL STUDENTS who are about to begin their Professional Studies are now arranged, and may be obtained by application to the Secretary of the University.

A. SMITH, Secretary to the University of Edinburgh.
College, Edinburgh, July 1, 1861.

TO INVALIDS.—A Physician residing in the

most Healthy Locality, near London, would receive an INVALID LADY or GENTLEMAN, requiring careful Medical Attendance. Every attention paid to their comfort.—Address Y., 3, Railway-place, Mildmay Park, Kingsland, N.

TO PARENTS AND GUARDIANS.—A well-

educated Young Gentleman would be RECEIVED as a PUPIL by a fully qualified Surgeon, residing in a Healthy Suburb, within a convenient distance of the Hospitals.—Address M. B., Post Office, Stoke Newington, N.

MR. PITTMAN has REMOVED from 1, New Ormond-street, to 45, LEICESTER-SQUARE (West side).

BIRMINGHAM TRIENNIAL MUSICAL FESTIVAL, in Aid of the FUNDS of the GENERAL HOSPITAL, on the 27th, 28th, and 30th of AUGUST NEXT.

Under the Especial Patronage of

HER MOST GRACIOUS MAJESTY THE QUEEN.
HIS ROYAL HIGHNESS THE PRINCE CONSORT.
HIS ROYAL HIGHNESS THE PRINCE OF WALES.
HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE.

President.

THE RIGHT HONOURABLE THE EARL OF SHREWSBURY AND TALBOT.

Vice-Presidents.

THE NOBILITY AND GENTRY OF THE MIDLAND COUNTIES.

J. O. MASON, Chairman of the Committee.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

LEEDS MEETING, 1861.

PROGRAMME.

MONDAY, JULY 15.—The Implement Yard open from Seven o'clock in the Morning, at an admission-charge of 5s. for each person.

The Judges to inspect the Live Stock, and to award the Prizes.

At One o'clock (or as soon after as all the Judges shall have delivered in their awards, of which notice will be given) the Cattle Yard will be open without additional payment. Arrangements have been made for distinguishing the Animals that have won the Prizes, immediately the Judges have made their awards. The Show Yard will be closed at Six o'clock in the Evening.

TUESDAY, JULY 16.—The General Show Yard of Cattle, Horses, Sheep, Pigs, Implements, Flax, Wool, Cheese, and Butter, open to the Public from Six o'clock in the Morning till Six in the Evening; admission, 5s. 6d. each person.

BERWICK GRAMMAR SCHOOL.—HEAD-MASTER WANTED.

The TRUSTEES of this SCHOOL will, during the ensuing month of August, proceed to the ELECTION of a HEAD-MASTER.

The System of Education comprises Instruction in English Grammar and Composition, Writing, Arithmetic, Book-keeping, Mathematics, Geography, and History, and in the Greek, Latin, French, and German Languages.

The Head-Master will be entitled to occupy and use, free from taxes, the Premises belonging to the Establishment, consisting of a commodious dwelling-house and a school-house, in which upwards of Eighty Boys may be taught.

The Annual Revenue of the School, arising from its endowment, amounts to about 1200*l.*, two-thirds of which the Trustees are permitted to assign to the Head-Master. Of the Fees, which (except with some modifications as to the sons of Freemen) are at present fixed at Two Guineas per Quarter, one-half will be assigned to the Head-Master, the remainder being applicable to the payment of an Assistant and to the formation of a Reserve Fund.

The other Emoluments of the Head-Master arise from 100*l.* It is desirable that the new Master shall commence his duties at the Re-opening of the School in August.

Candidates will be pleased to send copies of their Testimonials, on or before the 27th July inst., to the Clerk to the Trustees, at the Corporation's Treasurer's Office, Berwick-upon-Tweed.

By order of the Trustees, THOS. CAIRNS, Secretary.

Berwick-upon-Tweed, July 2, 1861.

Sales by Auction

*A fine-toned Finger Organ, suitable for a Small Church,
Chapel, or Music-Hall.*

MESSRS. WINSTANLEY, in conjunction
with Mr. GRAHAM FOLEY, of Trowbridge, will SELL
by AUCTION, at the Paragon, West Avenue, near Trowbridge,
Wiltshire, on FRIDAY, July 13, a Powerful and Brilliant-toned
FINGER ORGAN, erected expressly for the Rev. F. H. Wilkinson
within the last five years by Bates & Son, of London. It has 30
Stops, 3 Manuals, Pedal Organ, Composition Pedals, &c. The
Great Organ, Comm. C to G, consists of 15 Stops, viz. Dis-
sonance, Stop ditto, Dulciana, Clarabella, First Principal, Twelfth,
Fifteenth, Cromona, Sequahala, and Cornet. The Small Organ,
Compass Tenor C to G, contains—Double Open Dissonance, Open
ditto, Stop ditto, Principal, Fifteenth, Octave Fifteenth, and
Hautboy. The Pedal Organ has the Bourdon Stop, with Coupling
Stops uniting the Great and Small Organs and Pedals in Great
Organ. There is also a lower octave of swell continued on Stop
Dissonance, and 3 Composition Pedals. The pipes number in all
513; the case is of carved oak, and the exterior pipes are beau-
tifully illuminated and gilt.

Can be inspected previous to the Sale by an order, which may be
obtained of Messrs. Winstanley, No. 10, Paternoster-row, London.
W.C.; and of Mr. Foley, Trowbridge, Wiltshire; and on the Mornings
of Sale.

MULTE TERRICOLIS LINGUE, CELESTIBUS UNA.

SAMUEL BAGSTER & SONS,
15, Paternoster-row, London.

POLYGLOT BIBLES and BIBLICAL WORKS,
In Ancient and Modern Languages.

Presentation Copies in every variety of suitable binding.
Catalogues by post, free.

THE BIBLE OF EVERY LAND: a History of the Sacred Scriptures, in every Language and Dialect: with Specimen Portions of each, and Illustrative Alphabets, coloured Ethnographic Maps, Tables, Indexes, &c.
The Narratives are arranged systematically, according to the affinities of the various Languages and Countries. I. An account of the extent, population, &c. of each country. II. A review of the Characteristics of each Language, with a sketch of its derivation and present development. III. A History of the Versions of the Scriptures executed in each language, and of the editions and numbers printed. IV. Details of the Religious and Social Results that have followed the dissemination of the Scriptures in every Land.

New Edition. One Volume, Quarto. Half-bound in Morocco, extra. Price Two Guineas.

THE ANALYTICAL HEBREW LEXICON to the OLD TESTAMENT. By this work the student may ascertain with ease the correct parsing and the English equivalent of every word in the Old Testament Scriptures. This Lexicon serves also, to a great extent, the purpose of a Concordance, for all the words of the least frequent occurrence which constitute three-fourths of the whole number are supplied with a reference to their place in Scripture. Under each Root is given a summary of the whole of its derivatives. The Grammatical Introduction contains a complete series of Paradigms, which are referred to constantly throughout the work. Second Edition. Quarto, price 4s. "It is the ultimatum of Hebrew Lexicography, and will leave the Theologian who still remains ignorant of the sacred tongue, absolutely without excuse."

BAGSTER'S COMPREHENSIVE BIBLE; a Family, Pulpit, and Study Bible, complete in one volume: which contains a copious body of critical Notes; 800,000 selected Parallel Passages; Dissertations on the authority of the Scriptures; explanations of Weights, Measures, MSS., Versions, Jewish Writings, &c. &c. &c.; Introductions and concluding Remarks to each Book; Five various Indexes: a Family Register; and a fully coloured series of new Maps. All the editions of the Comprehensive Bible are kept ready, in various styles of thoroughly durable binding. Gilt and Silver mounting, of every kind, and newest patterns. Covers, Presentation Caskets, always ready. Polyglot Bibles and Biblical Aids, in great variety. Catalogues by post, free.

London: Samuel Bagster & Sons, 15, Paternoster-row.

Just published, price 5s.

THE PROPHET ENOCH; or, the Sons of God and the Sons of Men. A Poem. By JAMES BURTON ROBERTSON, Esq., Translator of F. Schlegel's 'Philosophy of History.'

"The work of a superior and educated mind."—*London Era*.
"The author of 'Enoch' approaches Milton in the sustained dignity of his theme, in the pure fervour of his imagination, in the completeness of his conception: he is heir to Milton's estate, as next-of-kin, he carries on the sublime action of the Scriptural epic."—*Dublin Review*.

London: James Blackwood. Dublin: M'Glashan & Gill.

THE COMPANION VOLUME TO THE 'LIVES OF THE QUEENS,' 10s. 6d.

LIVES OF THE BACHELOR KINGS OF ENGLAND. By AGNES STRICKLAND.

"Completes the series of lively and studied sketches, in which she may now be said to have produced a full biographical outline of the history of England."—*Examiner*.
"Sure of a kind reception from that immense class of readers who have sent Tupper into his hundredth thousand."—*Critic*.
"It is one of the most interesting publications of the present day."—*City Press*.

London: Simpkin, Marshall & Co.; and all Booksellers.

Just published, in fcap. 8vo. price 4s. 6d. cloth,

With Illustrations by GILBERT.

[This day.

Fcap. 8vo. 3*s*. 6*d*.**TANNHÄUSER:**

Or, THE BATTLE OF THE BARDS: a Poem.

By NEVILLE TEMPLE and EDWARD TREVOR.

" 'Tannhäuser' is a remarkable, and even, in its way, an original production.... The poem abounds with varied and happy images. It has the singular merit of being at once entertaining and poetical."—*Saturday Review*." Without dwelling on the praise due to a well-conceived and interesting romance, with a fit and happy solution in the unexpected miracle with which it ends, we turn to the wealth of poetical imagery and to the delicacy of poetical feeling with which it has been set to music, in this little story-book of verse. We have not for a long time read anything in poetry that has given us more genuine pleasure."—*Examiner*.**NEW SERIAL BY MR. ANTHONY TROLLOPE.**

With Illustrations by J. E. MILLAIS, A.R.A.

Part V. price 1*s*. 6*d*.**ORLEY FARM: A TALE.**

By ANTHONY TROLLOPE,

Author of 'Framley Parsonage,' 'Dr. Thorne,' 'Barchester Towers,' &c.

NEW SPORTING NOVEL.Third Edition, post 8vo. 2*s*.**MARKET HARBOROUGH; or, How**" Mr. Sawyer went to the Shires. From the very beginning of the hero's adventures a certain interest is experienced which never falls off, and the only annoyance felt is that the visit of Mr. Sawyer to the Shires terminates so soon. Indeed, the fault here perceptible may with equal truth be urged against Major White Melville in some of his previous writings, his finishing being too abrupt."—*Press*.Second Edition, 2 vols. post 8vo. 1*s* 6*d*.**LA BEATA: a Novel. By Thomas ADOLPHUS TROLLOPE.**" 'La Beata' is a novel of which there is nothing to say but what is good. It is a charming story, and, though the theme is as old as the world, it has the eternal and ever-renewed freshness of life itself. The story required to be very skillfully handled; and, in his management of poor Beata, the author has shown himself an artist as well as a thorough gentleman. It is a story in which the narrator reveals himself and his own nature more than the incidents and characters with which he has to deal. As a picture of Italian domestic and interior life and manners it is excellent."—*Athenæum*.

CHAPMAN & HALL, 193, Piccadilly.

* * * The New Work, by the Editor of 'Enquire Within,' entitled **THE FAMILY SAVE-ALL**, will be Published on Monday, the 15th of July. The Sale of the Author's Educational and Economical Works amounts to Half-a-Million Volumes in Great Britain, and in America to the same Number.

of the WORLD, from Marathon to Waterloo. Tenth Edition. 8vo. with Plans, 10s. 6d.

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne D'Albert,' &c. 2 vols. with Portraits, 11s. 6d.

"Miss Freer's ability and research have raised her to a conspicuous position among our historical writers. Among the most prominent of her qualities is a rare spirit of moderation and impartiality. Important and eventual as the reign of Henry IV. was, its details are little known by general readers among us, and therefore, in presenting so complete and interesting a narrative, Miss Freer has done good service to the public, besides enhancing her own well-earned reputation."—*Sun*.

"This is the greatest work to which Miss Freer has dedicated her powers. She draws her materials from sources mostly original, and she has selected for illustration a period the interest of which can scarcely be said to be second to any in modern times. There was romance in Henry the Fourth's character, and in his career, and events of importance were grouped around his life. Miss Freer writes only after the most conscientious research, and with a mastery of the subject which will of itself go far towards explaining the vitality and animation which so distinguish her productions. Where a style of such supreme attractiveness is combined with such accuracy in detail, it is impossible not to give the work a high place in the literature of the day."—*Sunday Times*.

A SAUNTER THROUGH the WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

THE OKAVANGO RIVER. A Nar-

rative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami,' &c. with Portrait of the Author, and numerous Illustrations. 2s. bound. [Just ready.]

JAVA; or, How to Manage a Colony:

Showing a Practical Solution of the Questions now affecting British India. By J. W. B. MONEY, Esq. 3 vols. 11s.

"Mr. Money's book throughout is clearly and concisely written, and cannot fail to be read with interest by all who feel the smallest concern for the welfare and prosperity of our Eastern possessions."—*Saturday Review*.

NOTHING NEW. By the Author of

'JOHN HALIFAX, GENTLEMAN.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of Hurst & Blackett's STANDARD LIBRARY of CHEAP EDITIONS of POPULAR MODERN WORKS. 5s. bound.

"Nothing New" displays all those superior merits which have made 'John Halifax' one of the most popular works of the day."—*Post*.

RECOLLECTIONS of a FOX-

HUNTER. By "SCRUTATOR." 1 vol. with Illustrations.

"This is Scrutator's best work. It is a sort of memoir of the hearty and accomplished writer, including pleasant notices of sporting celebrities, such as Ascheton Smith, &c.; but the real burden of the volume consists of experiences in the hunting field—real truths conveying excellent lessons as to horse and hound, and insuring for the volume an honoured place in every sportsman's library."—*Sun*.

A BOOK ABOUT DOCTORS. By

J. C. JEAFFRESON, Esq. New, Revised, and Cheaper Edition, in 1 vol. 10s. 6d. bound.

"This is a rare book: a compliment to the medical profession, and an acquisition to its members: a book to be read and re-read: fit for the study and the consulting-room, as well as the drawing-room table and the circulating library."—*Lancet*.

THE NEW NOVELS.

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONEY,' 'WILDFLOWERS,' &c. 3 vols.

"This is the best story hitherto written by a very pleasant novelist. It is essentially, and throughout, a good story—rapid and rich in incident—that nobody will leave unfinished. The book asserts a high standard of right, but it nowhere preaches, and is full of the cheerfulness and tolerance of Christianity. It is one of the pleasantest and wholesomest of the novels of the season."—*Examiner*.

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

HOMELESS; or, a Poet's Inner Life.

By M. GOLDSCHMIDT, Author of 'JACOB BENDIXEN,' &c.

"There is much that is eloquent and beautiful in this book. The whole aim of the work is elevated and noble."—*Athenæum*.

"A story which charms the reader as much by its novelty as its beauty."—*John Bull*.

THINKING and ACTING. By a

CLERGYMAN'S DAUGHTER. Author of 'HELEN LINDSAY,' 'OUR HOMELESS POOR,' &c. 3 vols.

"There is a charm about this tale which immediately captivates the reader. The tone of the entire story is so pure, the style so elegant, and the circumstances imagined so real and truthful, that it will be strange indeed if the heartiest welcome be not accorded to its publication."—*Messenger*.

WHEEL WITHIN WHEEL. By the

Author of 'ALICE WENTWORTH,' 'THE LEES OF BLENDON HALL,' &c.

NO CHURCH. By the Author of

'HIGH CHURCH.' THIRD EDITION. 3 vols.

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON.' 3 vols. [Just ready.]

The PHYSICAL GEOGRAPHY of the

SEA and its METEOROLOGY. By Commander MAURY, U.S.N.

NOTE.—The Public are cautioned against an Edition of this work which, although bearing the date of 1861, is a reprint of an old edition, quite superseded by the last edition. The present as well as its immediate predecessor are Copyright.

V.

Nearly ready, in 2 vols. post 8vo. with Map,

THE COTTON KINGDOM. By FRED-

DERICK LAW OLMSTEAD, Esq., comprising a Reconstructed and Revised Narrative of three former Volumes of 'Journeys and Explorations,' brought down to the present time.

VI.

Shortly, in One Volume, post 8vo. with 6 tinted Lithographs,

AFTER ICEBERGS with a PAINTER:

a Summer Voyage to Labrador and around Newfoundland. By the Rev. LOUIS L. NOBLE.

VII.

This day, in One Volume, 4to. with 46 Plates, cloth, price 7s.

ICHOGRAPHY, from the Sandstone of

the Connecticut River, Massachusetts, U.S.A. By JAMES DEAN, M.D.

VIII.

Just ready, in One Volume, 12mo. cloth, price 4s. 6d.

THE NATURAL and the SUPER-

NATURAL. By HORACE BUSHNELL, D.D., Author of 'The New Life,' &c.

IX.

Shortly, in One Volume, fcap.

THE CHARITIES of LONDON in 1861:

a Report of the Present Condition and Operations of above Five Hundred Charitable and Benevolent Institutions.

X.

Shortly, uniform with the New Series of Popular Books, with Frontispiece by John Gilbert, cloth extra, price 5s.

HIDE and SEEK. By WILKIE COLLINS,

Author of 'The Woman in White.'

XI.

Now ready, Third and Cheaper Edition, cloth extra, gilt edges, price 5s.

THE VICAR of WAKEFIELD. Illus-

trated by George Thomas, and printed on toned paper.

XII.

Now ready, in 8vo. sewed, price 3s. 6d.

THE ENGLISH CATALOGUE of

BOOKS for 1860: comprising a Supplement to 'The London' and 'The British Catalogues.'

London: SAMPSON LOW, SON & CO.
47, Ludgate-hill.

LONDON, SATURDAY, JULY 6, 1861.

LITERATURE

A Letter to His Grace the Archbishop of Canterbury, upon the Question of the proper Treatment of Cases of Polygamy, as found already existing in Converts from Heathenism. From the Right Rev. J. W. Colenso, D.D., Bishop of Natal. (Pietermaritzburg, Davis.)

THAT a Bishop of the English Church can, under any circumstances, tolerate polygamy will appear to many persons rather startling. But the Right Rev. J. W. Colenso, Doctor of Divinity, and Bishop of Natal, not only tolerates polygamy, under certain circumstances, but defends it on the ground of religion and humanity.

A well-known story represents the circumstances with which Dr. Colenso has to deal. An African chief is converted by missionary zeal to Christianity. But there is a difficulty. The proselyte has two wives. The Christian teacher tells him he must put one of them away, for the new law does not permit a man to have more than one wife. The chief is sorely perplexed. It is no easy thing to disturb domestic institutions, and the poor convert goes away to his home rather dark in the countenance. But a light fell suddenly upon him; and when next he met the missionary his eyes were wild with joy. "Me bery good Christian now," he shouted; "me only one wibe."—Ah, very well, says the missionary, and what have you done with the other?—"Oder," says the gleeful savage, "me ate her up—nice!"

This story, which may not be true in fact, must be allowed to be true in spirit. How, except by eating them, is an African or Fijian convert to get rid of his superfluous wives and concubines? The difficulty has been felt by men wiser than those Fijian chiefs, with whose family affairs our Correspondent, Dr. Seemann, has recently made us so well acquainted. The Grand Turk has had recourse to the Bosphorus, the King of Spain to the religious houses. A superfluous Sultana might be sewed in a sack, and a discarded Señora made a Lady Abbess. But the Fijian or the Kaffir is denied the more exalted conveniences or consolations of civilized life. A Kaffir wife does not like to go back to her father's kraal. Every missionary into heathen countries finds this difficulty in his way. He goes into a community which is socially established, in which the females are in excess of the males, and in which the chiefs and elders have many wives. He speaks to these persons of gospel truth and the beauties of a pure faith. They ask what they will have to do on becoming Christians. To put away their wives—all except one wife—is the first condition insisted on by the Church of England from all its converts. This is the language held to the Cherokee, the Dahoman, the Polynesian, the Santal, the Maori; and the almost universal first response to a proposal which appears to the unbeliever an outrage upon nature herself is, we are told, a refusal to hear any more. The love for wife and child is a fixed fact. Veneration for an abstract truth, of which the savage mind has at best only a dim perception, has little chance against such strong realities, and the heathen who is asked by a missionary to break up his household, put away his wives, and separate mothers from their children, as the preliminary of Christian baptism, only shakes his shoulders and passes on. This, we are assured, is the ascertained fact; and in the midst of our zeal for converting

the savage polygamist, it is wise to look ascertained facts in the face.

Bishop Colenso thinks there is a cure for this great evil—a means of removing this great obstacle in the way of conversion. He would tolerate polygamy; and he believes that he has found good reason in the Bible, in history, and in social philosophy for a toleration which, it is impossible to deny, many persons of liberal mind will condemn as excessive. He says:—"It is nearly twenty years since the subject was presented forcibly to my mind by the account, which I received from a Church of England Missionary, of the painful way in which he himself had been obliged to enforce the rule of 'putting away superfluous wives before baptism' among the North American Indians. Since that time I have pondered much upon the matter, and sought information upon it from various quarters—from the Scriptures and Ancient Fathers of the Church, from the writings of modern theologians, and the experience of missionaries, and especially, of late years, from natives themselves, in daily familiar intercourse with heathens and converts from heathenism. And the conviction has deepened within me more and more, that the common practice of requiring a man, who may have more than one wife at the time of his conversion, to put away all but one before he can be received to Christian Baptism, is unwarranted by the Scriptures, unsanctioned by Apostolic example or authority, condemned by common reason and sense of right, and altogether unjustifiable." In fact, Bishop Colenso considers Polygamy to stand in the same relation to Christian ethics as Slavery. Both are against the spirit of Christianity; neither is forbidden by the law. In the twenty years which the Bishop has given to the consideration of this serious and important subject, he has learnt to understand and to tolerate many things which must at first thought have been quite alarming. Those who have not gone through his experience, or made themselves masters of his authorities, will unquestionably demur to his conclusions. But he will not be driven from his positions by the mere cry of danger to morality, danger to the household affections, and the like. He is prepared, we dare say, to hear it said that he is worse than Brigham Young, and that his proper place would be a pulpit in the Mormon Church. Indeed, we should not be surprised to hear that in the minds of a certain kind of reasoners, this public defence of polygamy on the part of an English Bishop, exceptional and conditional though it be, was considered to have an unconscious and yet philosophical relation to that singular outbreak of the Anglo-Saxon race towards the practice of a multiplicity of wives. There are others who will probably run from Bishop Colenso into a much larger argument; connecting this defence of polygamy, remotely, perhaps, and yet intelligibly, with the fact made known in the Census Tables,—and which lies at the root of all those Belgravian laments and legends about pretty horsebreakers, of which the newspapers are just now so full,—the immense excess of the female population. England had forty years of peace, and the end of this prosperity is, that we have half-a-million more females than males. Pretty horsebreakers and Mormon emigrations may be the results of that obnoxious fact. But no amount of Belgravian lamentation will put an end to the one, and no amount of preaching seems likely to stop the other. The lamentation is not confined to Belgravia. It will be found, by those who listen for it, in Bermondsey, and Paddington, and Whitechapel, in Manchester and Leeds,

in Glasgow and Norwich. It is the surplus half-million that laments, and the voices of complaint rise up from every class. What can we say to it? Our institutions have no remedy for such developments. Our habits of thought have scarcely any tolerance for their discussion. What then? We see the results in those stubborn facts which, under the disguise of social evils, pretty horsebreakers, and Mormon emigrants, have so lately offended our sense of true social decorum. Nature, we see, will always accommodate herself to actual facts. A twig will rend a rock, and a weak woman's yearning will rend the most solid institution. Against all counsels, all proprieties, we see the female tide set in towards Great Salt Lake. Under the new circumstances woman makes herself a new law. In the newspapers of this morning accounts appear of a Mormon party having left London the other day for Liverpool and Salt Lake City. Two-thirds of this party are said to be women. It is impossible, we should say, to assert that this tendency of British women towards the domestic institutions of Utah is the result of profligacy. Ignorance may be the cause in part. But there are some who begin to see in it the probable operation of a general law. Is it the effect of a surplus half-million? Is Nature trying in this strange manner to accommodate herself to facts?

Our Bishop's 'Letter to the Archbishop of Canterbury,' though it has no direct relation to these topics, will inevitably, and against his wish, lend a new interest to their discussion, and perhaps borrow from the discussion a new source of interest for the problem it more particularly strives to solve.

In the letter which Bishop Colenso has addressed to the Archbishop of Canterbury 'On the Proper Treatment of Cases of Polygamy,' he has thrown his conclusions into the form of twelve general propositions, numbered as follows:—

"(i). I hold that polygamy is forbidden, indirectly by the letter of the New Testament, and directly by the spirit of Christianity, as not being in accordance with the Mind of the Creator, and the great Marriage Law which He laid down for Man in Paradise; and that, consequently, it cannot be allowed to Christians to *practise* it in any form,—that is, either first to *enter* into the state of polygamy, or to *increase* the present number of their wives. (ii). I find, however, that, under the Old Dispensation, polygamy was practised by eminently pious men, who, while continuing in that state, were singularly blessed of the Almighty, without a single word of reproof, or intimation of God's displeasure being addressed to them on account of it. (iii). From this circumstance, and the additional facts, that passages occur in the Mosaic Law, expressly recognizing the existence of polygamy, and that not a word is found in the Law or the Prophets, denouncing or in any way condemning it, I am led to conclude that, though not in accordance with the Mind and Will of the Creator, it was yet suffered by Him to endure for a season, and is not to be regarded by us as being, in all cases and under all circumstances, (that is, without reference to the knowledge of His Will, possessed by the persons who practise it,) sinful and displeasing in His Sight. (iv). I am confirmed in this view by finding that, whereas the Mosaic Law punished *adultery* with death, no punishment of any kind is assigned in it to the polygamist; and polygamy is only noticed in the Law, to correct certain evils connected with it. I conclude, therefore, that polygamy was not considered to be *adultery*, in the case of the Jews. (v). Neither is it to be considered adultery among the Kaffirs and Zulus, who, in fact, though heathens and polygamists, distinctly punish and condemn the adulterer. (vi). From the examples of the Old Testament, I infer that, though Marriage, in the high and proper sense of the word,

can only exist between one Christian man and one Christian woman, in which case it sets forth the mysterious union betwixt Christ and His Church, yet there have been marriages of another kind, permitted, or at least 'winked at,' by Almighty God, 'in the days of man's ignorance,'—marriages which were lawful and binding, though not made according to the Great Marriage Law of Paradise. (vii.) I believe the marriages of the Kafirs and the Zulus to be precisely of this kind, and very probably derived from the days of Abraham himself, through their Arab descent. (viii.) It is certain that such marriages cannot be violently broken, without very serious wrong and injury to the wives put away against their will, and to their children. (ix.) Hence, in dealing with the case of a polygamist convert from heathenism, we have to choose between two evils: Either we must allow him to retain his wives and children, and discharge his duties towards them, until it pleases God Himself in His Providence to interfere, and release him from his obligations; Or we must compel him to commit an act or acts of cruel hardship and wrong to others, and dismiss his wives and children, perhaps, to rot and perish in the abominations of heathenism. (x.) I find no direction of the Apostles, and no authority of the ancient Church, to guide me in this difficulty. (xi.) But I find a case somewhat similar provided for by St. Paul, who strictly charges a Christian to marry 'in the Lord,' yet allows, nay, requires, a Christian who has married a Heathen before Baptism, to retain his wife unless she chooses to leave him,—however strange and unhalloved such a connexion may seem to us, however likely to interfere with his own progress, and to corrupt the morals of his children,—and a Christian wife, in like manner, to remain with her heathen husband. And I find also cases of *incestuous* marriages, contracted before conversion, which were allowed in former days, in our own English Church, to continue after the reception of Christianity. (xii.) Under these circumstances, and considering that polygamy was tolerated by the Almighty in the case of so many good men of old, and that, consequently, it is not sinful and wicked in itself, and contrary to *all* religion, though it is contrary to the spirit of Christianity, whereas acts of injustice and wrong are positively sinful and wicked, and contrary to religion itself, as well as to the spirit of Christianity, I believe it to be the lesser evil of the two, and, indeed, the only righteously possible course, to allow a polygamist convert, whose wives do not choose to leave him, to retain them, with the understanding that he shall take no more, exhorting him to endeavour, by God's grace, to live as a faithful servant of the Most High among them, according to the Light vouchsafed to him, and like the polygamist Abraham of old, 'to command them and his children after him, to do justice and judgment, and to keep the way of the Lord.'

On the first point we suppose there will be little or no difference of opinion in the Church. Indeed, it will shock most people to find that a clergyman should think it necessary to declare his conviction that a Christian cannot lawfully marry more than one wife. The remaining propositions will, we think, meet with much censure. It is well, however, to say that Bishop Colenso's twenty years of research have produced a mass of learning on the subject, and an appearance of authority in favour of his views, not to be easily or hastily impugned.

For the period of the Old Testament, the Bishop relies very much on the case of David:

"When David received for the first time the great promise of the Messiah, he, too, was a polygamist, and had long been so. For two chapters before the above promise is recorded, we are told that 'David took him more wives and concubines out of Jerusalem;' and two chapters again before that, we have given the names of six wives, whom he had married previously to these,—two of them during his sojourn in the wilderness, when he had daily close communion with God, and wrote so many of the sweetest of the songs of Zion. Again, we have, at least, two passages in the Mosaic Law, which

expressly recognize polygamy, as freely permitted among the people of Israel. Thus we read, 'If he take him another wife, her food, her raiment, and her duty of marriage, shall he not diminish;' and 'If a man have two wives, one beloved and another hated, and they have borne him children, both the beloved and the hated, and if the first-born son be her's that was hated, then it shall be, when he maketh his sons to inherit that which he hath, that he may not make the son of the beloved first-born before the son of the hated, which is, indeed, the first-born.' And these passages occur side by side with others which denounce most severely the sin of *adultery*, and punish it with death."

The passage of Leviticus xviii. 18, "Neither shalt thou take a wife or woman to her sister, to vex her, during her lifetime,"—has been quoted as an authoritative prohibition of Polygamy. Bishop Colenso, however, quotes from Patrick's 'Commentaries' an exposition of this text more favourable to his own construction of it. Patrick says of the desire to receive these words of the Law as a condemnation of Polygamy, "there are such strong reasons against it, that I cannot think it to be the meaning. For, as more wives than one were indulged *before* the Law, so they were *after*. And Moses himself supposes as much; which plainly intimates an allowance in his Law of more wives than one. And so we find expressly their kings might have, though not a multitude. And their best king, who read God's Law day and night, and could not but understand it, took many wives without any reproof. Nay, God gave him more than he had before, by delivering his master's wives to him. And, besides all this, Moses speaking all along in the chapter of consanguinity, it is reasonable to conclude that he does so here, not of one *woman* to another, but of one *sister* to another, there being the like reason to understand the word 'sister' properly in this place 'a woman to her sister,' as the words 'daughter' and 'mother,' where he forbids a man to take 'a woman and her daughter,' or 'a woman and her mother.' The meaning, therefore, is, that though two wives at a time, or more, were permitted in those days, no man should take two sisters, as Jacob had formerly done—that is, two sisters at one and the same time—one of them 'during the lifetime' of the other." And the Bishop of Natal adds to this reasoning of Bishop Patrick the fact "that the Mahometan Law, copied, no doubt, from the Jewish, forbids a man to 'take to wife two sisters, *except what is already past*, for God is gracious and merciful."

Coming down to the new dispensation, Bishop Colenso is equally unable to find in the teachings of Christ and his Apostles any distinct condemnation of the system of polygamy. With regard to the teachings of Christ, he says:—

"The Jews, in Our Lord's time, were in theory, at least, decided polygamists, though it may be doubted whether many of them were actually living with more wives than one at the same time. It would seem that they rather practised polygamy by the more economical way of divorce, putting away one wife easily, without cause, in order to marry another. Justin Martyr, indeed, speaks of the 'foolish and blind teachers of his people, who even until now allow each man to have as many as four or five wives at once;' and again, he writes about a man's 'taking to himself as wives, *whom* he would, and *how* he would, and as *many* as he would, such as men of your (the Jewish) nation do, who, in every part of the world, wherever they have come or are sent, take to themselves women, under the name of matrimony.' Maimonides also (quoted by Jebb, in his note on the above) says: 'It is lawful for a man to marry any number of wives, even a hundred, whether all together, or one after another; nor has the first-

married wife any power of hindering this, provided he has the means of supporting them.' It is certain, then, that the practice of polygamy was recognized as perfectly right and lawful by those to whom Our Lord addressed his discourses. And yet, if it was very common, it is strange that we have no direct reference to it in any part of the New Testament, except in the controverted passage, of which I will speak presently. We know that Herod the Great had nine wives at one time. And it can scarcely be doubted that among the richer Jews would be found some, who lived in like manner, with two or more wives at once, as their own law and customs permitted. In later days, it is true, polygamy was strictly forbidden, and expressly among the Jews, by the laws of the Roman Empire. But there was nothing now to prevent it. And though, doubtless, the great body of those who attended on Our Lord's Ministry were the poor, who were content with one wife from necessity as much as from choice, yet He not unfrequently addressed the wealthier classes, the Scribes and Pharisees and Sadducees, some of whom, it can scarcely be doubted, were then living in the actual practice of polygamy! How remarkable it is that we do not find a single word of censure passed by Him on this practice! He says not a word on the subject of polygamy; though indirectly He teaches the true lesson of married life, when He asks, 'Have ye not read that He, which made them at the beginning, made them male and female, and said, "For this cause shall a man leave father and mother, and shall cleave to his wife, and they twain shall be one flesh."'

In the writings of the Apostles, our Bishop tells us there is "not a single direct reference made to the practice of polygamy, (though it was certainly allowed among the Jews, and probably among other Orientals, as the Arabians, with whom the Missionaries of the Church came in contact in those days,) unless it be in 1 Tim. iii. 2, and Tit. i. 6, where the rule is laid down, that a bishop (presbyter) or deacon must be the 'husband of one wife.' Nor were the Fathers more explicit as to the doctrine or practices of the early Christians. Our Bishop adds:—"I have not been able to meet with a single passage, in the writings of the Ancient Fathers of the Church, to throw light upon this question."

The Bishop's conclusion is, that polygamy was tolerated for a time among the converts of Christianity,—a conclusion for which the Mormon church will be very much obliged to him, whatever may be thought of his labours by our own Convocation.

We may quote this evidence adduced from Dr. Wolff:—

"A few facts, bearing upon this question; have come to my knowledge with respect to the Eastern Church, beyond the boundaries of the Roman Empire, through the kindness of the Rev. Dr. Wolff, who has obliged me with the following communication:—"When in 1825, in the monastery of Etah-Miazin, and again with Archbishop Narzes at Teflis, and with the Bishop of the Armenians at Nakht-Shawan, I made myself acquainted with the history of *Armenia*, by perusing the writings of Agatanghekos, Khorinazi, Serape, Ardal, and Apkar. And by this means I became acquainted with these rules on Bigamy, [already stated by Dr. Wolff, in a number of the Col. Church Chron., and agreeing with the practice which I advocate]. I may also add, that I heard in Abyssinia, from the learned priests there, that neither Takle Haymanot, the great *Ethiopian* Apostle, among the Gala, nor Feremenatus (Frumentius) among the *Abyssinians*, ever required the converts to divorce their wives, when more than one previous to their conversion.' This would tend to show that among *three* nations, whom the Gospel found practising polygamy, the *Armenians*, *Ethiopians*, and *Abyssinians*, the early missionaries of the Church acted on the principle of not interfering with the domestic arrangements already in existence."

A main part of our Bishop's Letter is concerned with the people of his own African diocese. One of the modes of obtaining converts, practised by some missionaries, is to receive runaway girls from the kraals; but the following passage contains not only a distinct disavowal of this bad practice, but a curious reading of an old story:—

"My experience has taught me that it is not desirable to have much to do with runaway children of this kind. They may, indeed, in some instances, settle down quietly enough on the Station, if they happen to form connexions with some of the Christian young men, who are looking out for wives, and are ready to produce the cattle required by the parents. But, in other cases, nature is too strong to be kept in bonds merely by the girl's own wish for teaching. And, being at liberty to go whenever she likes, the desire is re-awakened after a time for the freer habits of native life. The dread of 'cruel usage,' at all events, is found not powerful enough to keep them from going back to their kraals, unless strengthened by the fact that they are able to find husbands at the Mission Station."

The strength of those natural affections against which the missionaries bent on preaching a monogamic creed have to wage war is well shown in a dialogue quoted by the Bishop:

"In order to show the true position of the wife in the eye of a native polygamist, I cannot do better than quote the following conversation, which I held, in the presence of Mr. Shepstone, with the chief, Zatsuke, a most respectable and worthy heathen.—'Some people say that you, Zulus, 'buy and sell' your wives like cattle and other things. Is this true?'—'Some white people do say this of us. But it is quite untrue. They do not understand us. We do not 'buy and sell' our wives at all, though we do give cows when we marry.'—'To whom do the cattle go, when a girl is married?'—'To the father of the girl, if he is living; but, if not, then to her elder brother, by the same mother. For they do not belong to the father, except in certain cases, though he takes care of them while he lives. They belong to the girl's house—to the family from which the girl comes.'—'Who is over that house?'—'The mother of the family, while she lives, and, after she is dead, the elder brother.'—'When you marry, do you consider that you marry for life?'—'Yes, for life: we intend that when we marry.'—'But do you not send away your wives for very trifling causes?'—'No: we do send them away, but not for small causes. In most cases the wife is dissatisfied, and goes.'—'For what causes, then, do you send them away?'—'If she has an unbearable temper, so that no one can live with her, or if she commits adultery.'—'Does a man, who sends away his wife, get back the cattle he has given for her?'—'Yes, if she has been in fault. If there is a dispute, the chief of the tribe decides that. But he cannot get back the cows, if she has borne him a child.'—'Do you send them away when they are old and worn out?'—'No, certainly not.'—'But do they not themselves, when they get old, leave their husbands?'—'No, they will die with them.'—'Where do they live then?'—'If the husband is a poor man, they will live with him in his kraal. But, if he is rich, then each wife has a kraal of her own, and lives with her eldest son and other children, and she is the head of this kraal, and looks after the family.'—'How many wives have you, Zatsuke?'—'Seven.'—'Have you ever put any away?'—'No.'—'How old is the eldest?'—'I married her when Diagane came into power (1828). She is an old woman now.'—'Don't you think of putting her away, now that she is old and useless?'—'I would rather say, Let us be killed together.'—But is not the man bound to make the sacrifice required of him, as the very test of his acceptance of Christianity, however much his best feelings may be hurt, and his affections wounded? Must he not be ready to give up all—to cut off his right hand, and pluck out his right eye, if the Gospel demands it,—to forsake father, mother, wife, or child, if need be, in the service of Christ? Yes, if it be, indeed, in the service of Christ,—if the sacrifice required of him, however painful to himself, be such as the

Gospel demands, such as he has any right to make. But I deny that the Gospel demands such a sacrifice as this. I deny that it authorizes or enjoins him to cut off, or pluck out, another person's right hand or right eye, to save his own soul."

The practical difficulties are very great, as the least consideration serves to show. If a convert is made the missionaries have to consider what he shall do with his wives. Put them away—come out of sin, and be clean, is the common cry of men who have never been asked to part from wife or child. And which of his wives shall he put away? Shall he keep the first wife, or the prettiest wife, or the best-beloved wife? Our Bishop says:—

"Among those missionaries, who advocate 'putting away,' various plans are adopted for deciding who shall be kept, and who rejected. Some there are, who uncompromisingly insist that the first wife is the only true wife, and that she alone must be retained and all the rest dismissed. And yet the first wife of a Kafir is very seldom his chief wife (upon which point see Mr. Shepstone's letter, p. 26). She may, perhaps, be one of his dead brother's wives, whom he has married, (in accordance with the old Jewish custom,) to 'raise up seed to his brother.' She may be old, or she may be barren; while each of the younger wives, who must be 'put away,' may have a family of children. Or she may be a heathen, and the second be the loved wife and a Christian, yet both have children, and both desire to abide with the husband. Others have suggested (and this certainly, accords best with the principle of 'self-denial,') that he should be required to choose that wife of the whole number, who is the feeblest of them all, and least able to provide for herself. Others lay down a rule directly the opposite of the last, and allow the man, who is to 'cut off his right hand, and pluck out his right eye,' to choose which he likes best to keep, and sacrifice the rest, as if they were so many cattle, of which he might select the primest and youngest. Others again, wishing to avoid the injustice of any selection, where all have been taken as wives on the same understanding, have counselled that all should be 'put away' together, and the man be not allowed to retain any one of them."

The Bishop's own plan is to let the convert keep his wives; and he wishes to obtain for this practice the general sanction of the English Church. We cannot say that he has converted us to this view of the Church's duty in the matter. It is pretty certain, however, that the adoption of such a rule would smooth the path of the missionaries in dealing with the heathens already married. If the savage were not asked to make sacrifices, he would probably take more readily to baptism and to the secular instruction which the missionary stations so abundantly and temptingly offer him. Whether it would lead to an increase of converts among the unmarried is not so clear. We can imagine a young Zulu or Chocktaw, a Dyak or Bheel, brought up by a converted father, relapsing into heathenism until he had stocked his kraal or hovel with wives. The question raised by Bishop Colenso is one of very curious interest, and one on which Convocation might be no less profitably employed than it has lately been on the seven Essayists and Reviewers.

In-door Plants, and how to Grow Them, for the Drawing-Room, Balcony, and Greenhouse: containing clear Instructions by which Ladies may obtain at a Small Expense a Constant Supply of Flowers. By E. A. Maling. With a Frontispiece. (Smith, Elder & Co.)

THIS little book may enable any lady in London to become her own flower-grower. And this is a very desirable consummation; for we are educating every day larger and larger numbers of women with tastes for music

and flowers, which may be indulged safely or ruinously according as they are gratified cheaply or expensively. The flower-stand replenished by never-ending and still-beginning purchases of costly flowers, or even by a contract with a gardener to furnish relays of flowering plants, may suggest such ideas of extravagance to a father or a husband as quite to overpower, for him at least, the sweetness of their fragrance and the loveliness of their colours. But Eve must have her Eden. Adam, according to Milton, the historian of the events, found her among flowers—and with them all her daughters have always surrounded themselves. Why, then, should not every Eve be able to create her own Paradise? No doubt there are obstacles to be overcome and difficulties to be vanquished in London by the lady who would raise her own flowers for the decoration of her window, or balcony, or drawing-room. But the thing can be done. The bad air and deficient light, scant space and abundant smoke, do not present insurmountable obstacles to the achievement of growing flowers in-doors all the year round, or for every month in the year. As for the cost, it may vary from 2*l.* to 12*l.* per annum; and at no greater expense, with a window to the south, and a daily half-hour, a fair flower-grower—herself the fairest flower—with a thoughtful and observant mind, may win daily delights from witnessing the phases of vegetable life.

A book of advice does not admit of analysis; but it may be estimated from specimens of the advice. There does not breathe a woman who does not love a nosegay, and who has not regretted the decay of the flowers composing it. Every lady knows how disagreeable it is to take a flower out of a vase, or re-arrange the flowers in one, and must have wished to delay the effects of the fingers of Decay upon the forms where beauty lingers. Only exceptional men wear flowers in their button-holes, but all women carry bouquets. Advice, then, how to prolong the beauty of cut flowers is of universal interest. "For keeping flowers in water, finely-powdered charcoal, in which the stalks can be stuck, at the bottom of the vase, preserves them surprisingly, and renders the water free from any obnoxious qualities." Charcoal is, indeed, one of the best disinfectants of water, and bits of it ought to be at the bottom of almost every flower-pot. When cut flowers have faded either by being worn a whole evening in one's dress or as a bouquet, "by cutting half an inch from the end of the stem in the morning, and putting the freshly-trimmed end instantly into quite boiling water, the petals may be seen to smooth out and to resume their beauty, often in a few minutes." Coloured flowers, carnations, azaleas, roses and geraniums may be treated in this way; white flowers turn yellow; the thickest textured flowers amend the most, although azaleas revive wonderfully. "I have seen flowers that had lain the whole night on a table after having been worn for hours, which at breakfast next morning were renovated by means of a cupful of hot water." Carnations, and some others, "keep fresh after this treatment almost as long as they would have done if they had been newly gathered."

Of course all instructions must be modified by the object of the persons desiring them; and London ladies who escape into the country or to the seaside may not wish to be gardening in-doors all the year. But no Londoner is insensible to the suggestion of contrast which enhances the charms of flowers in the foggy month of November. "November may be made as bright as any of the months, with a little forethought; no case need be flowerless,

and no greenhouse dismal." Anemones sown in February, Japan lilies kept back a little, remains of geraniums, relics of mignonette, sprays of heliotrope, crimson China roses, and gay chrysanthemums just at their best may rob of its gloom even the month in which, according to Voltaire, Englishmen hang and drown themselves. For November very pretty sets of plants for baskets may be made up with fern in the middle and sedum on one side and blue lobelia on the other. Every lady who can grow her own flowers is superior to what she would be if she could only buy them,—and she will ennoble herself still more by knowledge, when she can understand how the leaf transforms itself into the flower, and trace the life-circle of the plant from the seed to the seed.

History of the Life of Dante Alighieri.—[*Storia della Vita di Dante Alighieri*, compilata da Pietro Fraticelli sui documenti in parte raccolti da Giuseppe Pelli, in parte inediti]. (Florence, G. Barbera.)

THE biography of Dante is a field of controversy in which all who enter the lists are required to come fully armed. Boccaccio was the first to break a lance in this literary tournament, and did so after a romantic fashion of his own, like a gallant cavalier, full of lady-love and chivalry. Leonardo Aretino, who followed at the distance of half a century, presented a more serious front, blaming Boccaccio for having written the life of the great Italian poet as though he had been merely composing a love story for the entertainment of amorous maidens and light-hearted youths. But both these biographies are of considerable importance: the first for the hints and explanations and traits of person and character which it contains, and that were derived from those who had personally known and conversed with the poet; the second for the historical particulars which it relates, and for the notice of letters and documents which have since disappeared. This latter, in fact, forms the complement and corrective to the former. Giovanni Villani, the Florentine historian, and contemporary with Dante, had, also, previously introduced a passing notice of the poet in his Chronicle, (l. ix., c. 133, 134). His nephew, Filippo, who, after Boccaccio, expounded at Florence the 'Divina Commedia,' wrote a short compendium of Dante's life; as did Giannozzo Manetti about 1450, and which was printed by Mehus in 1747. About 1468 Giovan. Mario Filelfo produced a Life of Dante, which he sent to Pietro, a great-grandson of the poet; in this, however, modern writers place little faith. Vellutello availed himself of it for the notice of Dante prefixed to his Commentary, and others have borrowed from it in more recent days. It is in this work that we read of Dante having fourteen times been selected by the Republic as ambassador to neighbouring and more distant governments: a statement which needs confirmation, and is now usually regarded as fabulous. But we think much of what is there contained may be true in a limited sense, understanding by the term 'embassy,' the carrying a message or the bearing of compliments. For other brief notices of the life of the poet see Pelli (c. II.). Along with the romantic but suggestive Boccaccio, and the severe and historical Leonardo, it is usual to class the literary and critical Tiraboschi, and thus complete the first triad of Dante Biographers whose accounts are comprised within a very limited number of pages.

But a subject of so much importance in the literary history of Europe was well worthy of full consideration, and of receiving all the

additional particulars which documentary evidence and diligent research might be able to procure.

To this purpose Giuseppe Pelli, Patrizio Fiorentino, devoted his most assiduous application, and collected, from authentic sources, the invaluable materials which are so well known to Dantophilists under the title 'Memorie per servire alla Vita di Dante Alighieri.' An imperfect edition of this work was printed by the author, at Venice, in 1759; he did not live to publish a more complete one with the result of his subsequent researches, nor to compose, as he had hoped to do, a life of Dante founded on these literary labours. A second edition was printed at Florence, by permission of his heirs, in 1823, and this has been a mine of wealth to all succeeding writers. This important work, however, still left room for additions, and required some few corrections; these Pietro Fraticelli, following in the wake of Giuseppe Pelli, has with much diligent and praiseworthy research succeeded in producing. 'The Life of Dante' by Cesare Balbo, first printed in 1839, is of a different stamp, and is written with an express reference to what is said by the poet of himself and his times: it is more directly historical, comprehensive and continuous, and of all the biographies which had then appeared was that which best satisfied the reader, and connected together, in a consecutive narrative, all that he most desired to know. Between this, and the materials of Pelli, the present Life of Dante holds an intermediate place. Pietro Fraticelli presents himself with his narrative in one hand and his documents in the other. He comes before us armed to the teeth, and thus speaks with an authority which nothing can gainsay, for if we will not receive his words, we cannot, at the same time, reject his proofs.

The author in his Preface states that, Pelli not having lived to work up the materials which he had so carefully collected, and his book being long since out of print, he thought it best to reproduce those materials, excepting a few which were erroneous, and, with the additions he had been able to find, offer them to his readers in a continuous historical form. "I do not," he says, "give a mere collection of *memorie*, I do not give a life of our Poet in that large signification which, in these days, is usually applied to works of a similar kind, but I give a history of the life of Dante compiled from documents, and written, so far as my ability permitted me, with that critical care which in such works is required." Without plunging into interminable disputes, he professes that he has sought to explain and resolve those questions only which in an historical sense are in strictness more immediately connected with the subject. "I have studied with all diligence to succeed as a faithful historian, without party prejudice; and in those controversies, both ancient and modern, which still exist on some points of this argument, I have not set forth any preconceived conceptions of my own, but have sought to solve them in the way which to me seemed most conformable to truth."

Nothing can be fairer than this proposal, and the author deserves much praise for the manner in which he has conducted his work. Most valuable additional documents are brought forward to substantiate facts, doubtful matters are left pretty much as they were, but some few particulars, which are new, we think the author has fairly established. Thus he has shown that Dante was among the Florentine troops which, with others of the Guelph League, in May, 1288, marched against the Aretini, and committed great destruction in the neighbourhood of their

city; a circumstance, as Fraticelli observes, which has not hitherto been noticed by any one (p. 88). This incursion into the territory of their Ghibelin neighbours was succeeded, in June of the following year, by the great battle of Campaldino, in which the Florentines were victorious, and where the Poet was among the foremost in the fight, as is well known from the fragment of a letter preserved by Leonardo Aretino, and in which Dante says, "dove mi trovai non fanciullo nell'armi,"—an expression which confirms the previous statement that he had borne arms before. Fraticelli has also shown, we think satisfactorily, that Dante inscribed himself in the company of Physicians and Apothecaries, not in 1297, as Pelli had stated, but in 1295, in which year he took part in a debate among the members of the Council of the Podestà; this would leave a wider margin for the embassies ascribed to him by Filelfo. We could have wished that Signor Fraticelli had gone more fully into the memorable events of 1300 and 1301: a period the most important in the life of the Poet, but, at the same time, that in which authorities are most at variance, and the order of events not easily ascertained. This, in fact, may be regarded as the very Gulf of Despair of Dante biographers. Monsignor Dionisi, of Verona, had in vain sought to reconcile them, and Balbo gave up the attempt as hopeless. Pelli, with all his erudition, fell into this critical pit: it is a very trap to catch the unwary. We hope the Editors of the National Edition of Dante's Life will do all they can to fill it up satisfactorily; but at present there it is, yawning under our feet; nor has Signor Fraticelli got over it so well but that we think he ought to render some reason to his readers why he has kept close to Leonardo Aretino in one part of this difficulty and gone contrary to him in another. There are here two most important questions. What was the special occasion of the banishment of the Neri and Bianchi, the one party to Castello della Pieve, the other to Serrazzano—and when did it take place? That our readers, who have not paid much attention to this critical period of Dante's life, may form some notion of what biographers have here to encounter, we will briefly set before them an outline of the case.

There was living in Florence at this time a distinguished citizen, by some years Dante's senior, who had not only served the office of Prior, but had also been the Gonfaloniere di Giustizia: this individual was Dino Compagni, the author of the Chronicle which goes by his name, and who took a prominent part in the proceedings of the time. Dino states, that on the eve of St. John (June 23), a procession of the Arti, preceded by their consuls, was attacked by the Neri, which gave such offence to the Government that the leading members of both factions were banished, as before related. Dino affirms that he was one of the citizens whom the Prior on this occasion consulted, and therefore he ought to be regarded as a reliable witness. But, unfortunately, Dino does not relate events in strict chronological order; and after the narration of what occurred towards the end of June, gives an account of what happened on the 1st of May. Giovanni Villani, who does not mention this attack on the trades' procession, states that the occasion of the banishment was the illegal meeting held by the Neri in the Church of Santa Trinità. Leonardo Aretino, who has given the fullest account of this secret meeting, says the same thing, and is followed by Landino. The Neri and the Bianchi were here both to blame, and equally contributed to the alarm and danger of the city, so that, according to these latter writers, the banishment took place in consequence of this disturb-

ance, whereas, according to Dino, this disturbance followed the banishment, and arose because the Bianchi were permitted to return before the Neri.

Pelli says very little on this subject, and places the banishment anterior to the 1st of May, assigning for it no special cause. The secret meeting in Santa Trinità he attributes, with Dino, to the return of the Bianchi before the Neri, after the priorato of the poet. Balbo follows Dino Compagni in ascribing the banishment of the chiefs of the two factions to what took place on the eve of St. John, and places the secret meeting in Santa Trinità in the following year, adopting the chronology of Marchionne Stefani, who, in his chronicle, is more precise in fixing dates than either Dino or Villani, and names for it January, 1301; but who, at the same time, agrees with the latter in assigning this secret meeting as the cause of the banishment: as likewise does Machiavelli in his 'History of Florence,' and Scipione Ammirato in his more extended work. Ammirato places the conspiracy in Santa Trinità after the 15th of February, 1301 (vol. i. pt. 1, p. 211). M. Fauriel, in his Life of Dante, is of opinion that this meeting was held "selon toute apparence vers les premiers jours d'Août," and that it was the cause of the banishment of the Neri and Bianchi.

Thus, from the days of Dante to our own, the most important event in the political life of the Poet, that which became the very turning-point of his fortunes, since all that followed was in consequence of the part which he acted under these difficult circumstances, has been, and still remains, a *verata questio*.

Pietro Fraticelli passes over this difficulty as if it did not exist. He merely relates, that after Dante had entered upon his office of Prior, that is, after the 15th of June, 1300, various brawls and encounters having broken out between the factions, which threatened speedily an open war, the Priori, who saw the danger to which the city was exposed, resolved to prevent it by sending into banishment the chiefs of the two parties. After this, the author turns to Leonardo Aretino to confirm the truth of what he has said, quotes the important fragment of the letter which Leonardo has preserved, in which the poet states that all his troubles, all the evils which he had suffered, had their occasion and beginning from his unfortunate election to the office of prior; in his own words, "dagli infausti comizii del mio priorato"; and then sums up his account by giving that of Leonardo, thus applying the vivid description of the latter to a different event from that of which Leonardo had written; for the account of the latter is in reference to what took place in Santa Trinità, but Fraticelli joins it to something which happened before. It is much to be regretted that the researches of the author in the archives of Florence have not furnished him with some authentic document in reference to this subject; there must surely be such, or there certainly did exist at one time the condemnation of the parties, stating when and for what they were banished; and Leonardo Aretino, who was very inquisitive in these matters, and, from his official situation, had the archives at his command, did not, we may be sure, fail to consult them, not only for his 'History of Florence,' but also with a special reference to the Life of Dante. We are much more disposed to hold with Leonardo in this matter than with Dino Compagni, and so was Machiavelli, and after him Scipione Ammirato, from whose pages Fraticelli makes very liberal extracts. If it be asked, "Would you, then, set aside the authority of a contemporary?" we should reply, "There are two

contemporaries, Dino and Villani, both of them public men, who took part in these scenes, and they differ in their accounts; and we prefer here Villani to Dino, because to us it appears that the former is more consistent than the latter, does not err so much in the consecutive order of events, nor seemingly contradict himself." The conspiracy got up in the Church of Santa Trinità—a conspiracy against the Government and the Bianchi, on the hearing of which the latter flew to arms, and, both parties mustering their friends and supporters, the city was thrown into the greatest danger and alarm, and the authority of the Priori almost disregarded,—does seem to us, as it seemed to the Florentine writers already mentioned, a much more likely cause to induce Dante not only to consent to the banishment of the Bianchi, and among them of his most intimate and dearest friend, but also to advise and urge it, than any less serious dissension that had hitherto broken out among them; and we would suggest, as a means of reconciling this with the chronology, that Marchionne Stefani has had more credit given to him in this matter than he deserves,—that the conspiracy against the Republic, for such in fact it was, might have been preconcerted in the spring of the year of Dante's priorato, but that the sentence against the offenders was not carried out till Dante was in office. An attentive perusal of Leonardo's Florentine History would show that much had to be accomplished in this matter between the spring and the summer. Each party providing itself with a great number of people from the country was not a thing to be done in a day, nor did the Government hastily come to their resolution; it required all the eloquence of Dante to persuade them, with the help of the people, to carry out this energetic measure. That the banishment to Serrazzano took place in the summer and autumn is shown, as Dionisi well observes, by the malaria fever there caught by Guido Cavalcanti, and of which he died at Florence in November following. Nor can there, we think, be any question as to what Serrazzano is here meant, that it is the Sarzana of the present day, a locality well known to all visitors to La Spezia. Fraticelli, however, objects to this, because, as he says, Sarzana is a healthy spot. From personal experience we doubt if it be wholly so in the great heats of summer and in autumn; but if healthy now, it does not follow that it was not subject to occasional fever five hundred years ago. Tradition here still keeps its hold. Of the meeting of the conspirators in Santa Trinità the author takes little notice, and merely alludes to it as "un conciliabolo," in which the Neri took counsel to invoke the aid of the Pope, and of his creature Carlo di Valois, who was then on his road to Rome.

The work of Signor Fraticelli consists of twelve chapters, each of which is strengthened with a corresponding portion of illustrative documents. As a fair specimen of the author's style, we take a passage in reference to the great Italian, and now European, question, the temporal power of the Pope (C. v.). Having given an account of the disgraceful manner in which the unprincipled Bonifazio resolved to carry out his purpose touching the Florentine Republic, he thus continues:—

But this interference of the Popes in temporal affairs, this constituting themselves the chiefs of a political party,—in short, this their temporal power, when and how did it originate? What was the scope of it? and what were its results? A most difficult subject would this be for me, even if I were at liberty here to treat of it. But I intend to give only short historical notices for elucidating certain facts narrated, which, without such assist-

ance, would not be readily understood. If by the temporal power of the Popes be meant their political authority, this began towards the year 730, when various cities of the Exarchate freed themselves from the oppression of the Greek Emperors, and placed themselves under the protection of Pope Gregory the Second, who (see Muzzarelli, p. 131) "found himself constrained by circumstances to act as the head and representative of the Roman people and dukedom." But the Lombard kings, who held almost the whole of upper Italy, having soon after violently occupied these cities, and seeking to impose their authority on Rome also and the surrounding district, Pope Stephen the Second had recourse to Pepin, king of France, who, having taken arms against Astolfo, compelled him to make restitution. The donation made to Stephen by Pepin was afterwards, by Charlemagne, confirmed and increased to Pope Adrian the First. If to these possessions be added those which, towards the beginning of the twelfth century, were left to the Holy See by the Countess Matilda, it will be apparent that the Pontiff from this period became one of the Italian powers. The Lombard kingdom having fallen in 800 by the arms of France, and the authority of the Emperor at Constantinople being reduced to a mere empty name, the Popes, either from gratitude to Charlemagne, or that the Italian people might have an effectual guardian, named and crowned him Emperor, thus restoring the Empire of the West. From that time the Popes and the people of Rome regarded themselves as the rightful electors of the Emperor, until, in the thirteenth century, this right was assumed, or rather usurped, by the seven Electors of Germany. Be that as it may, as the Pope, now become a temporal prince, elected the Emperor, or confirmed his succession, if the legitimate heir; so the Emperor, on his part, in the capacity of King of the Romans and Patrician of Rome, sought to exercise the right, if not of electing the Pope, at least of confirming his election. Hence the Western Empire and Italy had, as it were, two heads—two counterbalances: a complication not well defined either then or since: a source of good and of evil for many centuries. For as the Pope, like the Emperor, was a temporal prince, and as both ruled in the same region, there could not but arise an antagonism and a strife between them, from the desire to extend their influence and authority beyond that circle within which, were it possible for men to divest themselves of their passions, each should have been content to remain. Thus, not long after the death of Charlemagne, there sprang up the opposing parties of the Church and the Empire, though they did not take the names of Guelph and Ghibelin till four centuries later. But what is a name when the thing itself already exists? The Popes, as they had done from the first, by accepting the protectorate of the cities oppressed by the Greek monarch, placed themselves on the side of the people and of popular governments. The Emperors, on the other hand, took the part of the nobles and supported aristocratic governments. Acting in this way, the former were the principal cause of the liberal institutions of the Communes;—of those arts and of that civilization which Italy first had the advantage to possess, and, subsequently, the glory of conferring on other Christian nations. But whilst the Popes procured this good, they gave origin to an evil of which, at first, the Italians were not aware, but afterwards felt for a very long time with the force of a sad and sorrowful demonstration. I allude to those dismemberments into hundreds of petty states which rendered the Italians unable to resist the invasions of foreigners. From this evil arose also another, for being thus reduced to so many small municipalities, they could not but experience the necessity of acquiring consistency, or, for the benefit of their arts and commerce, of enlarging their respective boundaries. Hence their mutual animosities, their hatreds and strifes, and the destruction of one another. And from this evil there arose another also, for finding themselves attacked and oppressed by their neighbours, and indignantly refusing to acknowledge the supremacy of the Emperor, they sought, in their difficulties, the protection of the Pope, submitted

themselves to his authority, and humbly implored his help.

The political power of the Pope,—originally a passing expediency, like many others, useful and necessary at one time, but essentially contrary to the fundamental law of spiritual rule which has its throne only in the hearts of men, mischievous to the Pontiff as the Vicar of Christ, opposed to his proper functions, and detrimental to the faith,—can only be regarded as an element in the transition period of those middle ages in which the principles of modern civilization, and the enlightened development of the Christian character, were passing through their preliminary forms. Fraticelli thinks that had the Popes possessed greater political knowledge, they might have succeeded in freeing Italy from her foreign yoke, and have constituted her into a homogeneous federal nation, with themselves as her protectors,—a vain and foolish notion, a mediæval dream, as inconsistent with Papal policy as with the progress of European civilization. Who would intrust with more political power those who have so grossly misused the portion previously committed to them? A priestly president of a federal Italy would be either a mere puppet in the hands of an ambitious potentate or an empty chair. The middle ages needed nothing so much as a controlling power in Italy,—a supreme chief of the state, a ruler whose authority should have been respected and obeyed; the Guelfs knew this as well as the Ghibelins, but, unlike them, not only took no means to obtain it, but sought in every way to prevent it. Brunetto Latini, the preceptor of Dante, states in his 'Tesoro' (lib. ii. 29), that "as envy increased and generated mortal hatred between the nobles of Italy, and there was no one who might intervene to maintain the common weal of the country, the German princes (Electors) were established as by a direct necessity, that the nomination and election to the empire might be made by them, and that they should be its defenders and guardians." In thus acknowledging the necessity of an Emperor for the government of Italy, Brunetto Latini seems to anticipate the subsequent convictions of his pupil; and we have often thought that the reason why Dante placed his old master in Hell, among those who had sinned against nature and their own consciences, was on this very account. The Guelfs and Ghibelins regarded the welfare of Italy from opposite points of view, and there was no overruling power to silence their differences. One party considered the union of Italians in a general policy as a nation impossible without a recognized head: the other rejected that head, because it was of foreign origin, and believed it to be incompatible with the liberties of the free communes; but that this was not so, or not injuriously so, we have the example of those cities in the north of Italy which received their freedom from the Emperor, and to a certain extent acknowledged his authority, which kept them at peace among themselves so long as it lasted. The selection of a foreigner for Emperor,—to compare great things with small,—was analogous to the practice of the Republican cities, as Florence and others, in choosing a stranger for their Podestà. So great was the *invidia* among the native princes, that Italy was fain to seek in Germany the succour and support required. In the tenth century, harassed by the Hungarians in the north and by the Saracens in the south, a prey to the contentions of the lordly vassals of the defunct Carolingian dynasty, the hereditary governors of provinces, dukes, and marquises, ever ready to become tyrants when left to themselves, Italy turned for protection to Otho the Great, and offered him her Imperial crown. On the death

of Otho the Third, in 1002, without heirs, after an ineffectual attempt to establish an Italian king, the sovereignty was conferred on Henry the Second, a collateral branch of the Imperial Saxon family. After him, as no Italian prince could be found to accept it, and others refusing, the crown was offered to Conrad the Second, of Franconia; and from that time, 1024, Italy became subjected to the guardianship of the Electors of Germany, whose votes sufficed to give her a controlling head, though the King elect did not become Emperor until crowned by the Pope. This done, his authority was supreme; he was truly Caesar; and not only did the citizens of Rome take an oath of allegiance to him, but the Pope also. In the thirteenth century, however, this was reversed, when the Holy See set itself up for an independent temporal sovereignty, and then the Imperial supremacy at Rome ceased, and the Prefect of the Emperor was compelled to swear allegiance to the Pope. The great misfortune of Italy has been one of home growth,—the want of unanimity. Instead of uniting to resist oppression, and standing by one another, the Italian populations were all divided against themselves, and more intent on gratifying their personal animosities and carrying out their local feuds than in rising to the dignity of an independent nation. All their federal unions are seen to be formed in the interest of party; and because there was no forbearance among them, there was no universal compact. God grant that this may never happen again!

Boccaccio, who was fond of romancing, has left on record a nursery tale of a wonderful dream which Dante's mother had a short time before her confinement, and of this he gives an interpretation to show how the life of the poet corresponded to this supernatural revelation. Fraticelli notices the dream, but omits Boccaccio's exposition, which is the best part of the story. We wonder how it is that lovers of the marvellous have never noticed the remarkable comet which preceded Dante's birth by nine months, and lasted three. Giovanni Villani has given a long account of it, and also of the mutations which it foreboded, the changes of fortune and dynasties in Naples and Sicily, and other innovations in Tuscany and Lombardy. Those who were skilled in divination and in reading the aspects of the heavens subsequently affirmed that it indicated the advent of Carlo d'Anjou, which took place the following year. Others thought it had some connexion with Pope Urban the Fourth, as it first appeared when he fell ill, and disappeared when he died. But no one has hitherto connected it with the birth of Dante Allighieri, though it was a marvellous meteor, and worthy of marking so memorable an epoch. Villani describes its splendid rays, and its long luminous tail, how it arose in the east, and in its course to the west, when it had arrived in mid-heaven,—

Nel mezzo del cammin,—

that its tail, previously so brilliant, ceased to astonish—how is it that this remarkable phenomenon, so applicable to the appearance and course of Dante Allighieri, has hitherto been lost sight of by his biographers? We would candidly recommend its consideration to our Florentine friends. As regards the precise period of the Poet's advent, Signor Fraticelli affords us no new light. It was some time in the first half of the month of May, 1265. We have Dante's own authority that when he first saw the glorious Lady of his intellectual paradise, who was called Beatrice by many, who knew not what they were talking about, (see *Vita Nuova*, c. II.) he was just at the end of his ninth year, "*quasi al fine*,"—the sun having

for the ninth time since his birth returned to the same point very nearly from which it then set out; and if this vision of the Lady happened on the kalends of May, in the ninth year of Dante's mortal life, his birthday could not have been very distant. M. Artaud, we know not on what authority, has placed it as early as the 8th; but as we have been told by the poet that the sun was in the sign Gemini, the day is by necessity postponed to the 14th, when, in 1265, the sun entered that sign. There is an additional reason for regarding this day as the nativity of Dante, derived in part from Boccaccio, but more fully from Buti. Boccaccio, in his Commentary, cap. 1, relates that an intimate friend of the Poet in Ravenna, who had had the information from Dante during his last illness, told him, that his age exceeded fifty-six years by the space of time from May last to that day, "*lui avere di tanto trapassato il cinquantesimo-sesto anno, quanto dal preterito maggio aveva infino a quel dì*." This is somewhat less definite than the statement of Fraticelli (p. 96), "*ch' egli era morto in età di anni 56 e tanti mesi (cioè 4), quanti corrono da maggio (in che nacque) al 14 settembre 1321, (in che morì)*."

But Buti is more precise, and states that Dante was fifty-six years and four months old when he died (see Proemio). We have noticed the same statement in a codex of the '*Divina Commedia*,' in the Library of the Vatican, No. 1728, written within little more than seventy years from the Poet's decease. "*Et è manifesto che lo nostro autore morì nel 1321 a dì 14 de settembre . . . di 56 anni et mesi 4.*" This space of time would therefore bring us to the 14th of May for Dante's birthday.

Pelli mentions Donna Bella, the mother of Dante, having become a widow "poco dopo l'anno 1270," as though he had verified the fact by documentary evidence; but if this were so, then Boccaccio's story falls to the ground, which requires that Dante's father should have been living in 1274.

The statement of Leonardo Aretino that Allighiero, the father, died when Dante was "*nella sua puerizia*," a period which ends with the seventh year, does not, however, affect this circumstance, for "*puerizia*" is sometimes included in *adolescenza*, as by Dante himself, when he tells us (*Vita Nuova*, c. II.) that although he was very nearly nine years old when he first saw Beatrice, yet, as he afterwards says, "*io nella mia puerizia molte fiate l'andai cercando*." But this does not justify the Editors of the *Convito* (Padua, 1827) in reading, *Tratt. iv., c. 24, "mesi"* for *anni*, which though said to be found in all copies is evidently wrong, as Scolari has clearly shown.

Among other important matters discussed in this volume, the right orthography of Dante's name comes in for a due share of attention. Signor Fraticelli has always belonged to the single *l* division of Dantophilists, as opposed to that of the double *l*, and does battle in the cause of the *singles* with the zeal of a partizan and the energy of an advocate. But his argument and illustrations show, we think, only this, that lawyers' clerks and notaries were as careless in keeping to one form of proper names, as were the copiers of codici and scribes in general; they often indulged in two or three forms in the same document.

The author admits the correctness of *Aldighieri*, which was the casato, but thinks that changing a *d* into an *l* is a greater offence against grammar than leaving it out. As the *d* is here placed, the Italian language does not, he says, admit of its being shorn of its just proportions, and transformed into an *l*; here, we think, he is right; we have looked into

Bembo, and Salvati, and other learned pundits in letters and syllables, and can find no example to bear it out. But surely this does not prove that two *lls* cannot stand together in a proper name; and double liquids are favourites with the Florentine tongue. It is, surely, as lawful to alter a letter as to erase one, and that this was so we have the proof in those examples where the practice was adopted. In weighing the value of the examples produced, one thing seems to us very obvious, and this is where there are two *lls* the name would appear, most likely, to have been copied from what Dante himself wrote. Thus, in the book of matriculation of the Physicians and Apothecaries, it is written *Dante d'Aldighiero degli Aldighieri*. In the convention made with the Comune of S. Gimignano it occurs as *Dantem de Allegheris*. In the fragment preserved of the contract which Dante signed at Padua in 1306, the name has two *lls*, as also in that other contract of obligation with the Ubaldini, dated the same year. In these instances, Dante was present and wrote his name according to his mode of spelling it, and, therefore, this orthography has a better claim to be regarded as genuine than have those forms with one *l* which were written by notaries and clerks in state papers, in acts of accusation and sentences of judgment. In the 'History of Florence,' by the learned Ammirato, the orthography is *Aldighieri*. Monsignor Dionisi wrote *Allighieri*; and this more correct mode is now, we are glad to find, being generally adopted. In the translation of Benvenuto Rambaldi's Commentary, by the advocate, Giovanni Tamburini, and in the Commentary of Francesco di Bartolo da Buti, by Crescentino Giannini, the name is spelt with two *lls*. It is also thus written by Karl Witte, Professor Parenti, Centofanti, Scolari, Alessandro Torri, Lord Vernon, Seymour Kirkup, and others who prefer to follow the Master according to the most authentic examples, rather than the careless practice of nameless scribes.

We consider that Signor Fraticelli is mistaken in upholding Uguccione della Faggiuola as the Veltro of Dante, and in maintaining the genuineness of the letter attributed to the frate Ilario: this we regard, with Centofanti, as "una manifesta impostura," which the date alone is sufficient to show. But these are minor matters, and of little moment, compared with the valuable materials of incontrovertible truth which the author has here brought together, showing a labour of love and patience for which all Dantophilists will render him their most hearty thanks. He has produced a work which will be a text-book to future biographers, and a storehouse of knowledge to the diligent student. We should like to have said a few more words about Beatrice; but we fear there would be no end to disputes did we dare touch on this delicate subject. We, therefore, kiss the hand only to that Divine Lady, humbly recommending the author and ourselves to her heavenly guidance.

The Holy Bible, translated from the Latin Vulgate: diligently compared with the Hebrew, Greek, and other Editions, in divers Languages, with Annotations, References, and an Historical and Chronological Index, &c. Published with the Approbation of the Catholic Archbishops and Bishops of Ireland. (Dublin, Duffy.)

WHEN such a work as this reaches us from a Roman source, we imagine ourselves addressed as follows:—What do you mean by saying that we Catholics prohibit the reading of the Bible by each person in his own tongue? Our answer would be that we have never made such

an assertion. The various restrictions under which the Bible has been put from time to time, in one and another country, are far too many and too varied to be packed up in a single sentence. And if we felt it our business to make an assault upon the Bishop of Rome and his system, we should not, even were it true, begin by the reproach that the Bible was prohibited. If there were a country in which shaving was against the law, we should not dwell upon the oppressive and improper character of making the importation of razors a criminal act. The Roman principle is that none but the Church may interpret the Scriptures: this being granted, the prohibition of the books may possibly be, in certain times and cases, a justifiable proceeding. The Protestant assailants have often forgotten this: and have argued the question about the impediments placed in the way of reading the Bible as though they and the Roman Christians were quite agreed as to how it should be read by those who are to read it. The right of interpretation being refused, the question of access is one of policy determined by circumstances: and the right of private judgment is therefore the true battleground. For ourselves, we should disdain any other. And we think it not impossible that the combatants of our more orthodox Protestant Churches may have felt that perhaps it would be advisable not to insist upon private judgment too emphatically, but rather to meet the enemy upon the consequences of his refusal of it. We have sometimes imagined that those who have made this great principle their champion, have acted, now and then, somewhat in the manner in which David acted towards his noble-minded officer, when he wrote, "Set ye Uriah in the forefront of the hottest battle, and retire ye from him, that he may be smitten, and die."

There is evidence enough that before Luther (born in 1483) existed, translations of the Bible into the popular language were circulated, and had excited remark and discussion. The following curious instance is not much in the way of theologians. Regiomontanus published his almanacs at Nuremberg in 1474, and a copy containing the almanac for 1475 is before us. He reproves the Church for not reforming the calendar, and he states that the people, by reading the Bible in their own tongues, had become aware of the palpable error committed in the mode of observing Easter. His words are—"Quod pene in propatulo est popularibus jamdudum lingua vernacula litteras legentibus sacras." It is time to give up old party misrepresentations.

The edition before us appears to be a reprint of the Douay and Rhemish versions; the corrections, if any, are needles in a load of hay. There are a few notes, sometimes of a doctrinal and obliquely controversial character: but in good taste. When we take up a Roman edition of the Bible, we generally look at two points, being two out of many in which our Protestant translations have a certain disputability, and the Romish ones more. Turning to Genesis xlvii. 31, both sides express the Hebrew: our version says, "Israel bowed himself upon the bed's head"; the other has "Israel adored God, turning to the bed's head." Both correctly express that when Joseph had sworn to do what his father asked, the old patriarch performed his last act of devotion: the Roman version expressing what the Hebrew and the English imply. In Hebrews xi. 21, the author of the Epistle follows the Septuagint translation, which in the English version is "worshipped, leaning upon the top of his staff," and in the Roman version "adored the top of his rod." The Roman note on the passage in Genesis,

mentioning the version of the Seventy, proceeds to reconcile the Hebrew with the real or supposed meaning of the Seventy, by giving a double sense to the passage:—"And to verify both these sentences, we must understand that Jacob, leaning on Joseph's rod, adored, turning towards the head of his bed: which adoration, inasmuch as it was referred to God, was an absolute and sovereign worship; but inasmuch as it was referred to the rod of Joseph, as a figure of the sceptre, that is, of the royal dignity of Christ, was only an inferior and relative honour." This is very lame work: but the advocates of that kind of plenary inspiration which makes the Spirit of God recognize the Septuagint version and the original Hebrew both, are sadly hampered for an explanation. We may ask whether the *πάβδος* of the Seventy must necessarily be a staff to walk with?

The other instance is the call which the Baptist makes upon his followers to "do penance," which in the English version is "repent." The Roman note assures us that in the Scriptures and in the Fathers the word signifies not only repentance and amendment, but also punishing past sin by fasting, &c. Curious, if true: for God himself is said to *repent*. The truth is that the word means neither sorrow for the past nor amendment in the future: but only that change of mind, intention, purpose, which, when error or sin is in question—and then only—very naturally infers both one and the other. The word, in English characters, is *metanoieite*, in which an English eye can see the meaning. As to *meta*, a common English dictionary—the sixpenny book of the stalls—will show *metamorphosis*, *metaphor*, *metaphrase*, *metastasis*, *metathesis*, *metempsychosis*, *metonymy*—all having the idea of *change*. And as to *noieite*, nobody with any *nous* can fail to see the root of that part of the word. Change of mind or of purpose of mind is then clear: and any Greek Lexicon will confirm it. The Protestants do some violence to the word, by translating it in a manner which makes it always mean sorrow for the past, and hardly more; but the Catholics take an ell for the Protestant inch.

All abatement made, we have here a nicely printed and cheap edition of a version which differs very little from our own. We have seen zealous Protestants, who imagined that Roman Catholic versions are full of alterations, omissions, and insertions, very much surprised when they were shown the Rhemish translation. Should any such Protestants yet remain, we recommend them to lay out four shillings upon the work before us.

The Popular Education of France. With Notices of that of Holland and Switzerland.
By Matthew Arnold, M.A. (Longman & Co.)

CAREFUL inquiry into the state of public education in France, Holland and the French cantons of Switzerland, has led Mr. Arnold to the conclusion, that popular instruction is one of the things better managed on the Continent than amongst ourselves; and he prefaces his official report to the Royal Commissioners appointed to consider the aspect of education in England with an essay, in which he urges us to take a lesson from our neighbours across the Channel, and look to State-Action for an efficient system of national schools. The opinions of Mr. Arnold, who, besides holding a professorial chair in the University of Oxford, has had considerable experience as an inspector of schools, are, at least, entitled to a respectful hearing, and will unquestionably create discussion amongst those interested in the subject to which his labours

relate. The conciliatory tone of his essay will mitigate the opposition his views are sure to excite, and will insure him courteous treatment from adversaries who, like ourselves, discern in his treatise more historical paradoxes and contradictory arguments than one often meets in so brief a composition. Surveying the action of the higher upon the lower grades of society in past generations, Mr. Arnold maintains that the aristocratic influence has for some years been on the wane, whilst the democratic element has been steadily gaining ascendancy. To this statement there will be few dissentients. But the assent will be by no means so universal to the writer's next proposition, that power is shifting into the hands of the rising masses, not so much because of their greater enlightenment and worth, as because the English aristocracy have deteriorated in respect of tone, culture, aspiration,—in short, because the aristocracy have lost the exquisite aroma of the ancient *noblesse*. Mr. Arnold does not venture to account for this decay of the aristocracy. Enough for him that it is in progress, and that he sees no course open to our present rulers but to recede before the advances of democracy, and yield, one by one, the last remnants of a supremacy which they are no longer worthy to enjoy. Leaving the dying potentate, Mr. Arnold turns his eyes on the heir-apparent, and asks how the powers of the lusty stripling, Young Democracy, should be trained, so that he may discharge, with the greatest possible efficiency, the duties which will devolve upon him at his fast-approaching majority. Formerly, the aristocracy, venerated and followed by the submissive multitudes, imbued the people with noble sentiments, and placed before them lofty ideals. But this function of teacher and guide the territorial class can no longer discharge, for just "at the very moment when democracy becomes less and less disposed to follow and to admire, aristocracy becomes less and less qualified to command and to captivate." Where, then, is there hope for the people?—

"The one consideration is, on what action may we rely to replace, for some time, at any rate, that action of the aristocracy upon the people of this country, which we have seen exercise an influence, in many respects elevating and beneficial, but which is rapidly, and from inevitable causes, ceasing? In other words, and to use a short and significant expression which every one understands, what influence may help us to prevent the English people from becoming with the growth of democracy *Americanized*? I confess I am disposed to answer, *Nothing but the influence of the State*."

The State-Action, which Mr. Arnold longs for, would establish public schools for the middle classes—lyceums, after the French model, which, though not so good as Eton and Harrow, would be a great deal better than *Classical and Commercial Academies*. As is natural in the son of Dr. Arnold, the Professor of Poetry rates very high "the superior confidence, spirit and style, engendered by a training in the great public schools"; and he believes that similar institutions adapted to the circumstances of the poorer classes would save them from the horrors of *Americanization*, and render them fit to shape the policy of the nation. That is to say, the educational machinery which has failed to obviate the deterioration of the higher classes, would elevate and ennoble the lower. We are far from thinking with Mr. Arnold that the decay of the aristocracy is a fact; but surely it would be more reasonable for one holding Mr. Arnold's views to attribute such loss of personal vigour and dignity in some measure to a system of education, the uniformity of which tends to destroy individuality of character, by turning out a generation of pupils

as pins are sent out of a factory, with heads closely resembling one another.

But of all Mr. Arnold's strange paradoxes with regard to history, the most startling is that which points to the eighteenth century as the "flowering time of the English aristocracy." The student of social history taking his facts from the dramas, poems, novels, pictures, newspapers, diaries and private letters of the period, is accustomed to regard the eighteenth century as the particular period when the English aristocracy were most forgetful of the maxim, "*noblesse oblige*." Gambling, drunkenness, coarse intrigue, political perfidy, bear, bull and badger baiting, prize-fights, dog-fights, duels that even according to the laws of duelling were murders, constituted the business and the pastime of admired noblemen. The tone of female society is attested by the indecent verses written and the indecent stories read by women of the highest rank. And this period of mohocks and patrician ruffianism Mr. Arnold selects as an era remarkable for the refinement, dignity, and high culture of our aristocracy,—the humour of the assertion being heightened by a foot-note to the effect, that "no one well acquainted with the literature and memoirs of the last century" will doubt the author's words. What does Mr. Arnold produce as evidence that the "rare culture of the highest class has actually somewhat declined rather than that it has come to look less by juxtaposition with the augmented culture of other classes"? Passing over Swift, Pope, Mrs. Manley, Addison, Fielding, and a hundred other authorities, he directs his readers to Robert Wood's 'Essay on the Genius of Homer,' (1775,) p. vii, and to Lord Chesterfield's Letters (edit. of 1845), vol. i. pp. 115, 143, vol. ii. p. 54. The passages referred to are not printed in Mr. Arnold's pages, and without glancing at them the ordinary reader will not see how little they make for, and how much they make against, the author's position. The first reference is to the page where Mr. Wood records that the Earl Granville, "while he presided at His Majesty's councils, reserved some moments for literary amusement." The Earl was very fond of Homer, and in his failing health repeated with much feeling some pathetic lines from his favourite poet. Surely Mr. Arnold cannot think this anecdote establishes his case that the aristocratic culture of the present century is less than that of the eighteenth. Does he insinuate that we should in the present day look in vain for a nobleman of sufficient taste and scholarship to appreciate the beauties of classic literature? The story is so manifestly unable to sustain the burden put upon it, that we cannot believe Mr. Arnold finds in it the significance he professes. Possibly some critic, with less good nature than ourselves, will suggest a reason why Mr. Arnold has picked out for a task so much beyond its powers this pretty but comparatively trifling anecdote of Lord Granville, when he might have brought forward the names of a strong roll of noblemen, from Bolingbroke to Orford, whose ripe scholarship and gentle dignity atoned in some measure for the general ignorance and dullness of their order. The cases, however, cited from Lord Chesterfield's Letters are even more unlucky. Lord Chesterfield, in the first passage indicated, is advising his son to avoid that wretched affectation of learning which was, at the same time, a signal disfigurement of existing manners, and a sure proof that the amount of genuine classic culture in society was very slight:—

"These are communicative and shining pedants who adorn their conversation even with women by

happy quotations of Greek and Latin; and who have contracted such a familiarity with the Greek and Roman authors, that they call them by certain names or epithets denoting intimacy, as *Old Homer*, that *slly rogue* Horace, *Maro* instead of Virgil, and *Naso* instead of Ovid. These are often imitated by coxcombs, who have no learning at all, but who have got some names and scraps of ancient authors by heart, which they improperly and impertinently retail in all companies, in hopes of passing for scholars. If, therefore, you would avoid the accusation of pedantry on the one hand, or the suspicion of ignorance upon the other, abstain from learned ostentation. Speak the language of the company that you are in; speak it purely, and unlarded with any other. Never seem wiser than the people you are with. Use your learning, like your watch, in a private pocket."

Such was the pedantry of good society in "the flowering time of the English aristocracy," and such the picture which Mr. Arnold thinks a proof of the high culture of those whom it portrays. As genuine classic attainments became more general, this pinchbeck scholarship disappeared, until, in the present age of studious and well-read gentlemen, showy talk has given place to hard reading and earnest thinking. Glaring as are Mr. Arnold's inconsistencies, they are made doubly conspicuous by the carelessness with which he uses his words, the signification of some of them altering with the turn of a leaf. Thus, in one place "aristocracy" is employed, much in the same sense as Lord Eldon employed it, when he used it to denote "members of the House of Peers and great bankers." In another place it includes "not only the nobility and landed gentry, but also those reinforcements from the classes bordering upon itself." In a third passage it seems to embrace all parents who send their children to our principal public schools.

Mr. Arnold is not more fortunate when, leaving the past, he applies himself to regenerate the present. In order that State-Action may have fair play for educational purposes, he deprecates that jealousy of governmental interference which is a prominent feature of our public feeling. In this jealousy he sees nothing, but a remnant of that antagonism to State-Action which the Conventicle Act, the Five-Mile Act, and the Act of Uniformity planted in the breasts of the middle class. A greater mistake was never made. The dislike of the English to bureaucracy is no traditional animosity, but a conviction gained through daily experience that State-Action is, in nine cases out of ten, only another name for State-Inaction of the costliest kind. They know that Mr. Arnold's darling engine of social improvement, State-Action, means a Government commission with a circumlocution office attached; and without going back to the Conventicle and the Five-Mile Act, they have good reason to distrust the vaunted excellencies of such an apparatus whenever it is possible to do without it. Mr. Arnold's condemnation of a system of "concession to the denominational spirit" shows how little he can appreciate the temper and stuff of his countrymen. Indeed, we lay aside Mr. Arnold's essay with no increase of respect for his practical ability. A theorist and a bureaucrat, he is at the same time too rash and too timid to be a safe guide on a question of public policy.

NEW NOVELS.

Oliver Ellis; or, The Fusileers: a Tale. By James Grant, Esq. (Routledge.)—Mr. Grant has taken Dumas for his model. Such hair-breadth 'scapes and adventures, both in love and war, never befell any sons of men, except the heroes of Alexandre or Mr. Grant. Whether it be that the English is a decidedly prosaic language, and will not lend itself to the wonderful and sentimental

with the graceful pliability of the French, which has, somehow, the politeness to make all it says seem quite possible, Mr. Grant's heroes have not altogether the ease and melo-dramatic pose which Dumas gives to his characters; there is a lingering faith in the laws of gravitation, and a desire to propitiate common sense in Mr. Grant, which prevents him from boldly flinging himself on his imagination; he sees his difficulties, and tries to explain them. Dumas is superbly superior to the nature of things, and if it suited his purpose to make all his rivers flow up hill, his readers would never raise a question. Mr. Grant's scruples of common sense are hitches in the smooth flow of his story. Oliver Ellis, Mr. Grant's present hero, is a boy of gentle blood, and the son of a good officer killed in battle, without any means of getting on in the world except what lie in his own qualities. Born a soldier and adventurer, the effort he makes to stay at home for his mother's sake and work in a lawyer's office is, of course, quite overruled by destiny; he is carried away by a current of accidents, and being endowed with the nine lives of a cat, he encounters perils without number, which always leave him better off than he was before; he fights his way to a pair of epaulettes, a beautiful wife, and to all the treasures of a sunken galleon. He comes home again at last to find his mother alive and his sister lovely, and everybody is made as happy as possible, and the reader is glad to recover his breath and to think, with something like a blush, that he has not laid down the book once since he began to read it. Some of the incidental descriptions are good and graphic, drawn from the life; and there is a stir and spirit in the book which will make it welcome reading for dull days and country quarters.

Cruise of the Daring: a Tale of the Sea. By C. F. Armstrong. 3 vols. (Newby).—The greater part of this tale of the sea passes on dry land; but whoever may want a novel full of every species of adventure, where the hero is warranted to be beyond the possibility of being hanged, or drowned, or blown up by gunpowder, an enemy who has wronged him by seizing his title and estate, and who pursues him with unscrupulous and unrelenting malice all through the three volumes, without being able to catch him; such a reader will here find a novel to his mind. Besides all the attractions we have enumerated, there are comic Irishmen, Italian bandits, stolen documents, which are of the greatest value to others besides the owner, secret meetings of conspirators in vaults at midnight, pressgangs, battles, storms at sea, shipwrecks, a mysterious father, and passages in the Irish Rebellion of '98. If the reader should complain that all this makes an aggregate of nonsense, we cannot help it; we are quite of that opinion ourselves, only it may plead, in mitigation of judgment, that we have often read much solid good sense that was not half so amusing.

The Broken Troth, from the Italian: a Tale of Village Life in Tuscany. By Phillip Iretton. 2 vols. (Macmillan & Co.).—This is a charming story, and translated with so much spirit and grace that the reader is only made aware that it is translation by reading it on the title-page. The story is the simplest possible; the subject has been used to point morals and adorn tales more times than can well be counted, not only in English, but in all the languages since the Tower of Babel,—that of a young girl eloping from home, jilting one lover to marry another, and in nine cases out of ten being very sorry for it ever after. But however often told this story may have been, it is as new as it was the first time we heard it, for every time it happens it is as different as are the individuals whose fate makes the subject of the tale. Young girls have not quite the same facilities for making clandestine matches in the South, and it involves more scandal, but there is an unfortunate family likeness amongst all disobedient children, though they may sometimes plead "extenuating circumstances." The present story of 'Broken Troth' gives a lively picture of the domestic lower-class life in Italy, such as no foreigner, unless he had been for many years domesticated, could give. The details are somewhat romantic, and in an English story would sound far-fetched, but where

an Englishman would turn poacher an Italian would turn out a murderer or a brigand, supposing the same development of the genus Scamp to be in him. The pictures of village life under various aspects,—the portraits of the old miserly father Geronimo,—of the cowardly scoundrel Ludovico, and his brother ruffian Lupetto,—are life-like in every touch; the descriptions are photographic, and would serve to identify them to any policeman under heaven. Here is a picture of an Italian ruffian, which will give an idea of the style both of author and translator:—"Lupetto was about forty years of age, short in stature, but very strongly formed—a pocket Hercules, in fact. His head was bald, except at the back and at the temples, where brushes of long hair, jet black, coarse, and unbrushed, stood out like the mane of a wild beast. His beard grew in patches here and there over his dark olive-coloured face; his eyes were remarkably small, of a light-brown colour, and far sunk in his head; deep between them was fixed the root of a nose that (if we may be allowed the expression) sprouted forth in so bold a curve that it seemed as if it wanted to leave his face altogether. The line of his jaws projected forwards, so that his chin was far in front of his forehead; his lips were thin, compressed and pale; and his cheeks on each side of his nose were scored with two wrinkles, so deeply marked, so bitter, that when he smiled they gave his face an expression truly diabolical." It was for the bosom friend of this nice young man that the luckless Giammini threw over her handsome and excellent true lover. The history of her sufferings and repentance, and of her reformation from the faults of her character, are told with a graphic simplicity which gives them an air of originality. We give our hearty commendation to this pleasant and spirited story.

Forgiveness: a Novel. By J. C. Bateman. 3 vols. (Newby).—"Forgiveness" is a clever novel, though the story has its back broken by the number of personages, with their fortunes, whom it is obliged to carry. It might easily have been split up into three distinct compact stories, which are here agglutinated to each other not very firmly or securely. The greater portion of the story, and the part that will have most interest for the reader, lies at Freetown, in Sierra Leone. The author is evidently at home in the life and character of the place. The African sketches are extremely good and vivid. The young Arab, Prince Amrah, is quite fascinating, and there are curious illustrations of African superstitions. The complications of the story, which are embroidered on to the main topic, colonial life in Freetown, are interesting enough separately, but no reader can be expected to bear in mind the concerns of so many people, all with love affairs of various degrees of intensity on their hands, accompanied by misunderstandings which threaten to part for ever those most interested in coming together. Being in the hands of a merciful author, all ends well except for our own favourite, Prince Amrah, whose position, however, was marked out by Fate. No exercise of the author's prerogative could have married him happily to the object of his adoration; he must have been converted, which would have spoiled him, and the heart of a deserving young soldier must have been broken, which would have been unfair, so we can only sympathize with him.

May Blossom; or, Shadow across the Hearth. By Austyn Graham. 2 vols. (Newby).—Notwithstanding that this novel professes to be the work of a man, and the experiences of a barrister-at-law, it is evident in every line that it must be written by a very young lady, without any amount of special ability to justify her continuance in authorship. It is not a first work, and the same feebleness of interest marks this work as the former one ('The Parson and the Poor'). The characters in 'May Blossom' are shadows of shades; the incidents are described with wordy minuteness, but all life or likeness to the realities of this world has died out, if it ever existed. The whole novel seems like the figures which are cut out of paper to amuse children, and 'May Blossom,' with its succeeding tales, may be allowed to take about the same rank with the paper people as a work of Art.

OUR LIBRARY TABLE.

The Voice; or, the Art of Singing. By the Rev. W. W. Cazalet. (Addison & Co.).—Mr. Cazalet says in his Preface, that he is known "to have some claim to speak on his subject." The claims of every professor will, more or less, be judged by the success of his pupils. In the absence of any such exemplification (known, at least, to our audiences), we have only Mr. Cazalet's book to proceed on. We have gone through it carefully, and confess to have found little beyond such covert self-exaltation as belongs to a general protest against what has been done, said, and thought on the subject by teachers whose deeds—as consequence of their systems—have been the great vocalists of Europe. We imagine that Mr. Cazalet, even after "the much and unremitting attention given" to the voice "for a long period of time" by him, entertains notions more confused than correct.—When he is classifying voices, it is odd to find, that whereas Madame Grialet is set down as a *mezzo-soprano*, Madame Pasta is classed with Madame Persiani (!) as among the *sopranos* "who still linger in the memory of other days,"—whereas the former had a voice lower than her successor, while the latter possessed one of those acute organs which rendered it necessary for her to have most of her show-music transposed, sometimes as much as a third upwards.—We do not imagine that Mr. Cazalet's register for the *contralto*, extending to B flat above the line, will be accredited by many who have studied the voice. The highest note that we recollect for the moment called for by any legitimate composition for the voice is the *sharp* above the line in Signor Rossini's "Fac ut portem" ('Stabat'); yet that this song is felt inconveniently high in its texture is proved by the fact, that nine out of ten of the ladies who attempt it transpose many of its important phrases an octave lower. What is said about *falsetto* (which, Mr. Cazalet asserts, is "only used in tenor voices") is no more satisfactory.—When we come to his practical directions, we are no less at issue. His example of how the common four-quaver accompaniment should be bowed (as violinists phrase it), p. 59, would seriously disturb many a *cantabile* were it carried out. Other of his precepts seem no less curiously empirical, if they be considered apart from the awe into which we are naturally stricken by one who puts himself forward with such high pretensions to overrule and amend.—In brief, it would be no unfair thing to say, by way of review, "Let us hear Mr. Cazalet's pupils: his book is good for little."

The Divine Mystery of Life. (Helley's, Hart & Co.).—This is a very little book; all the forms from which it is printed would not cover two square feet. It is about the "trium system called into existence by divine will, under the name of MAN." There is a new Zoology, "Class I. *Incorporealia*: Order I. *Infinitum*." This order consists of one *Genus* without plurality, DEUS, GOD. And so on. If the reader likes this example of the Divine Mystery, he knows where to find more.

Explication du Zodiaque de Denderah, &c. By Justin Roblin. (Caen, G. Philippe).—The date of this work is 5872 of the fifteenth period of 27,000 years each. The Zodiac of Denderah has given information to "Capitaine au longcours" Roblin, of a curious character; among other things, the knowledge of some valuable gold and diamond mines. The Captain therefore invites those who have the wit, to join him with 50 francs each, and to form a "Société Universelle des Voyants," to find out and divide among themselves half the gold and diamonds; the other half, we suppose, being for the decipherer of the Zodiac. To this prospectus we add, from ourselves, that we know a gentleman who, for a fee of 5 francs, will undertake to tell any intending subscriber the precise quantity of gold, and of diamonds, which will fall to his share; and he will further undertake to make up the quantity he names, should the share prove less, on condition of receiving half the surplus, if it should prove more. All which he informs us he can do from the Zodiac of Eaná, which M. Roblin has overlooked.

Philosophy of the Infinite: in Answer to Sir W. Hamilton and Dr. Mansel. By the Rev. H. Cal-

derwood. (Macmillan & Co.)—This is a second edition, enlarged; the first was in 1854, when it could hardly have been an answer to Dr. Mansel. We cannot enter upon so great a discussion in few words. We are of opinion that the reading of Mr. Calderwood's book would be advantageous to those who go very much into such matters; but we should recommend them to have Sir W. Hamilton and Dr. Mansel at hand, and to compare their statements very closely with the representations of them. We do not mean that our author makes unfair statements, but he makes short and smart abstracts; which faithfully represent the effect of Hamilton and Mansel upon his own mind, but seem to us likely to convey a wrong impression to his reader. And in metaphysical discussion there is nothing more useful than to make a close comparison of the words of a writer with the translation of a well-meaning critic, especially where the critic's translation is of the nature of paraphrase.

Inventive Geometry: a Series of Questions, &c. By W. G. Spencer. (Mozley.)—A large number of simple questions, without answers, which may be suggestively useful to teachers.

The Twelve Churches; or, Tracings along the Watling Street. By the Authoress of 'The Red Rose.' Illustrated by H. H. T. (Rivingtons.)—This pleasing little itinerary was originally undertaken by a lady, with a desire to benefit the funds for purchasing a new organ for St. Alban's Abbey. It conducts the reader in a very agreeable manner along the road from London by Hyde Park Corner to St. Alban's, gossiping cheerfully the whole way, setting up stations, or halting-places, whereto to indulge in historic and antiquarian reminiscences, and occasionally pointing out also some of the choicest beauties of nature. Seldom have we found so unpretending a pamphlet containing so much instructive and interesting matter. The clever landscape illustrations also add not a little to the charm of its pages. They reflect great credit on the free pencil of "H. H. T." Even on London's threshold—for such it was a few years back—at Hyde Park Corner, the author narrates Cromwell and Thurloe's escape through overhanging their carriage horses. Tyburn, again, affords a variety of anecdotes. "Canons," the magnificent residence of the Duke of Chandos, which he built, and which was pulled down so soon after his death, occupies an important position in these pages. It is curious to learn, on the same authority, how the fine marble staircase was removed to Chesterfield House in May Fair,—how the columns were bought for the Portico at Wanstead, and are now to be seen at Mr. Weare's house at Hendon,—and how the equestrian statue of George the First, till recently in Leicester Square, originally adorned the grounds at Canons. A more modest dwelling at a little distance from this magnificent pile, near the end of the village of Edgware on the Whitechurch Road, bore the following inscription on a board till quite lately:—"In front of this house stood the blacksmith's shop of Wm. Powell who was parish clerk at Whitechurch, where the immortal Handel was organist—in whose shop he took shelter during a storm of rain—This house was the residence of Powell and is upwards of 300 years old." Stanmore, Harrow, Bushey, Elstree, Hadley, Barnet and Totteridge are all delineated with peculiar care. Barnet was formerly celebrated for its mineral spring as well as for the great battle between the Yorkists and Lancastrians. Hadley, however, retains an antiquarian relic of considerable interest:—"The unique vestige of the middle ages in the shape of a fire-pan, or pitch-pot, on the south-west tower, which was blown down in January, 1791, was carefully repaired, though now not required for the purpose of giving an alarm at the approach of a foe by lighting pitch within it, or for a beacon to guide the wandering steps of the good brethren of St. Alban's in their nocturnal wanderings over Hadley Common. The need-fire thus lighted, and suspended in this ancient cauldron at the top of an iron rod, could be seen at a great distance from such an elevated situation." St. Alban's itself is left untouched; but the author invites her companions to visit that venerable city, recommending other guides for its more stately masses, who, although equally trustworthy, could

scarcely be expected to leave so pleasant an impression on the fellow-traveller, or to invest the subjects they would treat of with so cheerful a spirit.

Uphill Work. By Mrs. Clara Lucas Balfour. (Houlston & Wright.)—"Uphill Work" is an admirable little work; the story is pleasant and inspiring, and though didactic, the moral, so far from spoiling the tale, is quite the best part of it. The religious element is rather breathed throughout than ostentatiously put forth. We can recommend the book as a present both for boys and girls.

Climbing: a Manual for the Young. By Benjamin Smith. (Mason.)—This is a book that may be given to Sunday School scholars for a reward-book, with advantage, for the counsel contained in it is sound and practical. Sunday School scholars are too much accustomed to be "put in their right places," as the phrase is, to object to the peculiarly didactic tone of this work, which seems to measure out wisdom in rations, and to allow of no question or complaint. To our thinking, the tone which pervades all Sunday School literature is extremely disagreeable; but then we are not good boys in a Sunday School class. "So much the worse for you" might be the retort of Mr. Benjamin Smith, unaccustomed as he is to any observations not set down in his instruction books.

Gradus ad Parnassum. By Dr. Julius Conrad. (Leipzig, Arnold.)—An elaborate and careful work. Most of our readers, no doubt, know that the title does not mean the ladder by which a poet climbs up to his garret, but a Latin dictionary in which all the words are marked with longs and shorts, and the quantities demonstrated by metrical citations. Add to this that as many synonyms as a word will take are annexed, in order that when the young verse-maker has got the right word with the wrong quantity, he may replace it by the wrong word with the right quantity. All this was so in our young days, and is still. Dr. Conrad has placed the long or short mark over every vowel in the book: and even when a syllable is common, he places an inverted short mark over its vowel. There is much redundancy in this.

The Strains on Structures of Ironwork. By F. W. Shields. (Weale.)—Mr. Shields is an engineer who had his attention especially called to the subject by his being employed on the Crystal Palace in 1852. A book on the strains of girders, &c. is not a text for our handling; we have satisfied ourselves that the author's meaning is accessible. And it has come in our way to know that his rules have been as well tested as could possibly be done in the time during which they have been framed; as in Brazil, in Spain, and at Manchester. We may therefore recommend Mr. Shields to the attention of constructors, as a writer who describes what he has really tried, and is therefore worthy of serious attention. The importance of attention to the conditions of strength in iron structures increases daily.

The Gaffer's Guide and Measurer's Manual. By T. Kentish. (Dring & Page.)—The alliteration of Mr. Kentish's title reminds us of old Leybourn's 'Platform for Purchasers and Mate for Measurers': we did not suppose that the dry humour of the old philomath still lived in the land. But the book is a very good one: the author is not a man of routine, but one who has read and thought; and he is a thorough calculator, fond of numerical examples. Cask-gauging is, in the ordinary way, a dry subject. There was, indeed, a Scotchman who, when asked, What is the best way of ascertaining the content of a cask? replied—"Eh! mon! if your nose dinna tell ye, ye maun e'en tak a wee drappie,"—but though Mr. Kentish gives a rule of his own, it is not this one. His rule, and one or two other novelties, must be tested by those who are to use them: all we have to do with them is to say that Mr. Kentish deserves to be listened to.

Of publications of a religious nature we have to mention, *Sin: its Causes and Consequences*, by the Rev. H. Christmas (Allen).—*An Answer to the 'Essays and Reviews,'* by T. Collins Simon (Parker).—*The Rev. H. Stobart's Daily Services for Christian Households* (Parker).—*Notes on the First Essay in the Series called 'Essays and Reviews,'* by E. H. Hansell (Rivingtons).—*Angels, Cherubim, and Gods; or, an Enquiry into the Signification and*

Application of these and other Kindred Expressions used in the Holy Scriptures (Wertheim).—*Some Remarks on 'Essays and Reviews,'* being the Revised Preface to the Second Edition of 'Sermons on the Beatitudes,' by the Rev. Dr. Moberly (Parker).—*Revelation and Belief*, by the Rev. A. Weir (Parker).—*Revision of the Liturgy*, by J. Billet (Collingridge).—*Christian Vestiges of Creation*, by the Rev. Dr. Sewell (Parker).—*The Difficulties of the Twenty-ninth Canon respectfully submitted to the House of Convocation*, by a Colonial Bishop (Parker).—*The Doctrine of the Trinity*, by Dr. Stark (Murray & Gibb).—*Are Brutes Immortal? an Inquiry into Bishop Butler's Hypotheses*, by the Rev. J. C. Boyce (Parker).—*Truth mixed with Fiction; Sundry Ecclesiastical Memoirs, consisting principally of Passages in the History of Young Nonconformist Ministers* (Manwaring).—*Death and its Issues: a Sermon preached on the Occasion of the Death of Francis Duke of Bedford*, by the Rev. E. W. Cook (Hatchard).—*Julia Bridgenorth; or, Pride Indulged and Pride Conquered* (Mozley).—*The York Journal of Convocation, containing the Acts and Debates of both Houses of the Convocation of the Province of York*, edited by the Rev. G. Trevor (Mozley).

THE FIRST OF JULY.

OVER this azure poplar glade
The sunshine, fainting high above,
Ebbs back from fleecy clouds that move
Like browsing lambs and cast no shade;
And straight before me, faintly seen
Thro' emerald boughs that intervene,
The visible sun turns white and weaves
His webs of silver thro' the leaves.
The grassy sward beneath my foot
Is soft as lips of lambs and bees.
How cool those blue-bells at the root
Of yonder tree, that dimly glance
Thro' dews of their own radiance!

Yonder I see the river run,
Half in the shadow, half in sun;
And as I near its rushy brink
The sparkling minnows, where they lie
With silver bellies to the sky,
Flash from me in a shower and sink.
I stand in shadows cool and sweet,
But in the mirror at my feet
The heated azure heavens wink.

All round about this shaded spot,
Whither the sunshine cometh not,
Where all is beautiful repose,—
I know the kindled landscape glows.

But in this place of shade and sound,
Hid from the garish heat around,
I feel like one removed from pain
And fever of the happy brain,
Like one who, in the pleasant shade
The peaceful dead have slowly made,
Walking in silence, just perceives
The gaudy world from which he went
Subdue itself to his content,
Like that white globe beyond the leaves!

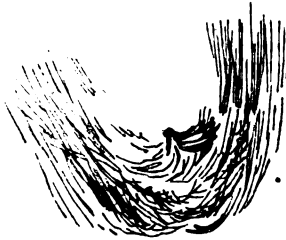

B.

THE COMET.

On Sunday evening, about ten o'clock, a Comet of extraordinary splendour suddenly appeared. At the same hour it became visible at Rome, Lisbon, Paris and London. The Comet is, in fact, a very small body—the diameter of the nucleus, according to Mr. Hind's measurement, being no more than four hundred miles. Its excessive brilliancy is due to its nearness to the earth. When first seen, it was no more than thirteen millions of miles from this planet,—and this evening (Saturday, July 6) it will be under twenty-three millions from us. The rate at which it is moving from our point of vision is nearly thirty miles a second—more than a hundred thousand miles an hour. So small an object will very soon get beyond our view. French papers say that this is the Comet of Charles the Fifth, which has been expected about this period; but this, it appears, is a mistake. Mr. Hind states that "The Comet arrived at its least distance from the Sun about one o'clock on the morning of June 10, in heliocentric longitude $244^{\circ} 35'$, being then separated from him by 76,000,000 miles. It crossed the plane of the Earth's orbit from the south to the north side in longitude $279^{\circ} 1'$ on June 28, in a path inclined $85^{\circ} 58'$ to the ecliptic. The true orbital motion is direct."

We are favoured with the following communications on the subject:—

"My dear —,—The Dalmeyer shows the fan or sector of the Comet's nucleus very finely, though with less light than the 7-in. Newtonian that I find my father has to bear upon it. The flame from the nucleus was much in this figure (given in the first of the annexed engravings) inclined chiefly to

the following side, and two envelopes or nucleus coma and one envelope were plainly visible. The Comet was retreating all to-night rapidly along its tail, leaving Omicron on the tip of the Bear's nose in the rear, and travelling over little stars in that neighbourhood. The tail this evening was extraordinary. (This is shown in the second engraving.) The central rib itself was bent at ϵ Draconis, where it was also nearly

head was almost vertically over Omicron, in the Great Bear's nose, and during the night retreated almost in the apparent direction of the tail. At about 11 o'clock the tail could be traced for fully ninety degrees; it consisted of a curved brush of light bending over to the direction of the two pointers. The light of this short brush was extremely diffuse on the western side; towards the eastern side a long narrow ray shot out, extended over the zenith, and passed through Draconis, where it again enlarged, and became very faint, but could be traced several degrees beyond an imaginary line, which would join α Lyrae and Arcturus. The appearance of the Coma in my second Newton's reflector was on the 2nd inst. very like a broken fan, supposing the two lower ribs to be considerably curved, and the height of the fan small in comparison with its width. The nucleus, which was situated at the joint of the ribs, was extremely small and elliptical, the longer axis of the ellipse being in the direction of the length of the tail. Last night the fan-shape of the Coma was much more distinct and more generally filled with light; but there were several irregular brighter rays within it. The light of the coma and envelope is much more diffuse and less brilliant than Donati's Comet of 1858. I made an attempt on the 2nd to obtain a photograph of the Comet in the focus of my reflector; but not the slightest impression was produced by an exposure of two minutes, although a fixed star was clearly depicted. Yesterday, the 3rd, I made several attempts to photograph the Comet by means of Rosse's No. 3 portrait lens mounted on the top of my telescope, and carried round by clockwork,—not the slightest trace of the Comet was depicted in fifteen minutes, although the fixed stars were depicted. As Donati's Comet was photographed by similar means in seven seconds (not by myself), it follows that the present Comet is considerably less actinic than Donati's.

"WARREN DE LA RUE."

We have seen other attempts made to photograph the Comet, but without success. The contiguous stars left a strong impression on the prepared glass, but the Comet itself left no trace of its presence.

ELIZABETH BARRETT BROWNING.

ON the 29th of June, at Florence,—after a life of health so fragile that its prolongation till now has been a marvel,—died the greatest of English poetesses of any time. This epithet is not forced by immediate regret, but results from the comparison of those who, since the days of Anne Countess of Winchelsea, wearing such names as Joanna Baillie and Felicia Hemans—have shown to this island of ours, rich in poets, that Genius has no sex;—however it be tinged with a particular hue and form, in proportion as the frame into which it is infused is muscular or delicate, belongs to a Dante or a Corinna.

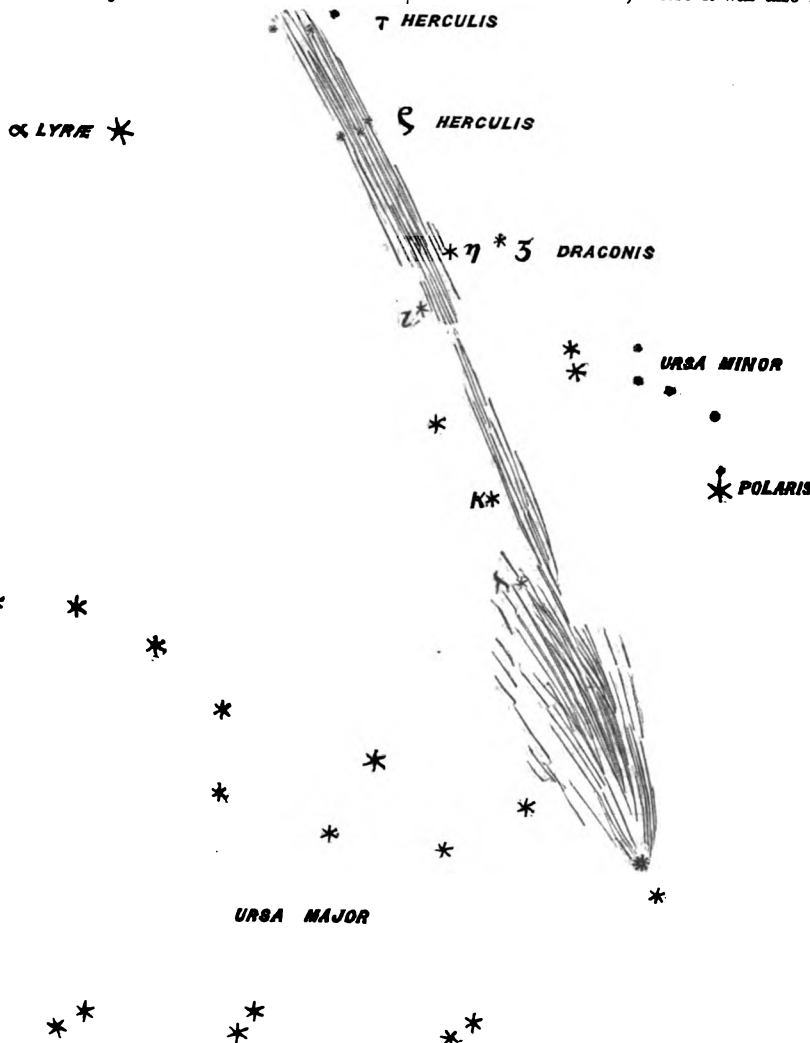

That Genius, too, has no need of stimulants in its cradle or in its girl-and-boy years, we believe will be illustrated with no common force when the life of this gifted woman comes to be traced out. Elizabeth Barrett Browning was born into the house of a middle-class merchant, opulent and a Dissenter, whose sympathy for imaginative culture was limited.—There must have been something from the first, about her, magnetic and original;—since her own confessions and early attempts show that she drew around her those of quick apprehension and cordial sympathy, such as her kinsman, John Kenyon (whose memory is dear to so many a man and woman of letters), the blind Greek scholar, Burgess (to whom she inscribed her 'Wine of Cyprus'), and others who helped in her intellectual nurture and enlargement,—long ere rhyme or word of hers had become known to the public,—in the days when other women, more flimsy and more fluent, were crowned and garlanded as so many modern Muses. Her training, it may be said, was strict; her frame delicate beyond ordinary delicacy,—but the girl managed to lay hold of quaint learning and daring thought,—to rise on the wings of a soaring fancy, with an instinct which seemed to defy circumstance, physical disqualification, and limited experience of society.—Her beginning of author-

"Cranford, July 4, 1861.

"Although I watched diligently for a break in the clouds, on Monday, the 1st instant, I did not get a sight of the Comet, and it was on the 2nd, at 7 minutes past nine o'clock, that I first perceived the Comet. The head of the Comet was then as bright as a star of the second magnitude, but appeared to the naked eye fully as large as Jupiter, which was visible near the western horizon; the

extinct. At ϵ Draconis it was very attenuated, where it issued from a sort of resplendent bunch or scalp-lock, which alone would have looked like a short and full birch-rod driven as if by a wind to the left, and accordingly very bulgy and definite upon the right side, just above the nucleus, but ragged and indefinite on the left side to a considerable distance from the nucleus.

"ALEX. S. HERSCHEL."

ship was no publishing of 'Lines to a Rose,' no second-hand reminiscence of scenes and feelings better portrayed elsewhere, but an 'Essay on Mind' and a translation of the 'Prometheus' of Æschylus. The last, when printed, so little satisfied its author that, on some call for its republication being made, she re-translated the Greek tragedy.

Of these essays little transpired to the world till the year 1836, when 'The Romaunt of Margret,' anonymously published in the *New Monthly Magazine*, startled all true readers of poetry by its daring and deep originality, and clung to the memories of some with such force that they could not be contented without knowing from what stranger came so new and so real an addition to their pleasures.—Of this we can speak with knowledge.—Presently the same unseen hand gave out other gifts,—other poems,—incomplete, perhaps, (as an uncut diamond may be incomplete). Some among them drifted to this journal; every one having its diamond novelty and beauty, and a nerve which set it apart from the horde of sweet verses written on pleasant themes, by anybody, or nobody.—No name was announced in connexion with these early successes. Presently, a collection of these scattered lyrics was put forth headed by 'The Seraphim,' a sacred drama prompted by no less vaulting an ambition than that of one professing to have watched the 'Crucifixion,' and who hid herself in the guise now of an awe-stricken, now of an awe-raised, angel.—By this time Miss Barrett's name was abroad, and it became known, also, that she had been for years the inmate of a darkened room,—doomed, as was thought, to slow death, and as such withdrawn from active share in the world of society or letters. But her poems broke the door of the dark chamber for her against her will. Old friends, of course, had long ministered to her there; but strangers would write to her, and thus by degrees she was drawn into a commerce with much that is boldest in speculation, rarest in fancy, choicest in literary worth. Her letters are as remarkable as her poems—filled with noble thoughts, recondite allusions, thick-coming fancies,—never worldly, always womanly,—but almost without peer among the letters of women.

A second collection of verse, headed by 'The Drama of Exile,' in which she trod Milton's ground with the step of a poetess, had not long appeared, and placed her yet higher with her public;—when it was told that the inmate of the darkened chamber had risen from her couch to marry a poet, in many of his instincts and fashions delicately fitted to herself, and was gone out into the world—into Italy.—The eagerness with which one so long prisoned flung herself into the life of a beautiful and new world,—the resolution with which she adopted it as the country of her heart and hope, was to be seen in her next poem, 'Casa Guidi Windows,' a passionate moralizing on what happened in the South in 1848. She enjoyed all she saw, and grasped at all she held, much as a bird freed from its cage might do;—intensely, enthusiastically happy, with a belief in goodness and progress which nothing could daunt, nor set aside.—There may have been, combined with this, as was but natural, too little regard for that middle world, neither rich nor poor, neither of genius nor of stolid creatures, which has still hopes, fears and duties of its own, meriting sympathy, be they ever so little picturesque;—and this disregard, with something of the feeling of a commissioned prophetic, broke out in her 'Aurora Leigh,'—that strange, sublime, unequal, prosaic, poetical novel in blank verse (more lengthy than 'Paradise Lost,' the epic) which no one who has taken it up can lay down till the end, let him be ever so angry, ever so afraid of the woman in Britomart's armour going forth to combat for her sex; and combating always well, if not always wisely.—The effect of this remarkable production, remarkable by whatever standard it may be tried, was without precedent in the annals of poetry by women.

Of Mrs. Browning's last work, 'Poems before Congress,' enough has been said. By the verses in it her memory will neither live nor die. Neither can we, in the first moment of losing one so original, so true, so highly gifted, anew apply rule

and plummet to her works as works of Art. Suffice it to reiterate, that no woman has written anything approaching to them in strength, imagination and versatile knowledge, since women wrote poetry.

If not strikingly fair to see, she was gentle and unobtrusive in her manners, with a charm which stood in the stead of health and beauty. Never did woman so full of intellectual wealth and poetical fancy take part in society with such an absence of pretension as she did. She was fearless in speculation, credulous in adopting theories, staunch in her partisanship, to no common degree,—the most faithful of friends, the most loving of human beings, to all her kinsfolk. Her intrepidity of thought, her range of acquirement, her power over the poet's art, are the world's property, and her works in part represent these. Those whom she loved, and whom she has left, will remember her (so long as life lasts) by her womanly grace and tenderness, yet more than by her extraordinary and courageous genius.

MUSIC FOR THE EXHIBITION OF 1862.

THE rumour, which it appears by the *Athenæum* of June the 15th had been promulgated in Paris, respecting new inaugural music for the Great Exhibition of 1862, is correct. We may state, that there is fair promise of the plan being well worked out. It originated (we are further permitted to say) in a sketch submitted to the Commissioners by Mr. Henry F. Chorley, consequent on the paper by him, 'On the Recognition of Music,' read at the Society of Arts a couple of years since, which excited some discussion. The compositions suggested are a full orchestral and choral anthem, to range (as regards length) with Handel's 'Zadok the Priest'—orchestral pageant music—a procession—march for wind instruments—and a choral hymn for voices. The German and the French composers mentioned, M. Meyerbeer and M. Auber, have accepted the offered commissions to take part in this ceremonial music, which must of necessity be within restricted limits. Signor Rossini was written to, in the hope that he might be induced to represent Italy on the occasion. His answer is as follows:—

"I regret my inability to accept the honour proposed to me by Her Majesty's Commission for the Exhibition of 1862. If I still belonged to the musical world, I should have made it a duty and a pleasure to prove, on this occasion, that I had not forgot the noble hospitality of England. Allow me to hope, Sir, that you will be kind enough to communicate all my regret to your colleagues, with the assurance of my high consideration.

"G. ROSSINI."

Failing Signor Rossini, Signor Verdi has been applied to, as the most popular living Italian celebrity.—Of the English arrangements, we shall speak another day. Meanwhile, the step taken by the Commissioners is noticeable, as the first of its kind made in this country for many a long year,—since the anthems commanded for Coronations, or recent more private court solemnities, hardly offer a parallel to this commission for the musicians of four great musical countries to represent their art at the World's Fair of 1862.

THE GORILLA WAR.

50, Albemarle Street, July 3, 1861.

A letter signed John Edward Gray, in the *Athenæum* of June 15, contains the most positive reiteration of the charge that Du Chaillu has copied (p. 370 of his book) a certain skeleton of a gorilla from a photograph by Mr. Fenton, in the teeth of Du Chaillu's assertion, that it is from a drawing made from his own specimen. Dr. Gray adds, "I affirm, without hesitation, that the figure itself gives it the most positive contradiction;" adding, as further proof, that "the upper bone of the left arm, broken in the photograph, has been restored in Du Chaillu's copy, but that the copyist has forgotten to lengthen it to correspond with the right arm."

In consequence of this astounding conflict of testimony, I have made a careful comparison of the two skeletons, in the photograph and woodcut, aided by compasses and tracing-paper. The result is that Dr. Gray, to use the mildest words, is

utterly mistaken, nay, that every part of his statement is the reverse of the fact, and that his own words may be turned against himself. With the English photograph before me, I pledge my word that the two skeletons are totally different in position, proportions, and in individual parts, *c. g.*, the breast is broader, the pelvis larger, and the skull larger in Du Chaillu's cut than in the photograph, thus clearly showing that the skeleton is not the same. But, more than all, the photograph is taken from a different point of sight, which entirely alters the perspective in the two figures, while the left arm, instead of being shorter, as Dr. Gray asserts, is of the same length with the right, so that the compasses can detect no material difference!

All this can be seen by any one who will use his eyes. Yet Dr. Gray may contradict me with the same audacious pertinacity with which he has contradicted Du Chaillu. To guard against this I have referred the matter to Mr. Fenton, who made the photograph, and I have his authority for stating that it differs throughout from Du Chaillu's woodcut in the perspective, and is drawn from a nearer point of view, so that no skill in adaptation by a copyist could have made the woodcut out of the photograph.

All this may appear to some a trivial matter, but if, as I apprehend, it affords a means of testing Dr. Gray's own accuracy in other instances, it will enable the world to judge what value to set upon his other charges against Du Chaillu of falsehood, imposture, &c.

I invite scrutiny from all quarters to verify* what I here state. Until I began the examination it seemed to me incredible that Dr. Gray should be so utterly reckless of facts and so unscrupulous in accusations for which he has not a shadow of foundation.

Dr. Gray's professional occupation renders the comparison of minute differences in specimens presented to him the business of his life; consequently, it is the less excusable in him, either wilfully or through want of care, to try and make the world believe that black is white. It seems to me also peculiarly ungenerous in him to follow with so virulent a persecution a foreign traveller without waiting for evidence which is about to be produced, or regarding that which is now before him.

JOHN MURRAY.

FOREIGN CORRESPONDENCE.

Naples, June 29, 1861.

A very liberal movement towards the instruction of the working classes has just been made, which I think worth noting. The Museum has been thrown open on *fête*-days, and the following are the terms in which the fact is made known. His Excellency the Lieut.-General of the King, in the Council of the 15th inst., considering that a great proportion of the people of this metropolis, and especially the most labouring, who are compelled even on holidays to work for their subsistence, cannot enjoy the instruction and the civilization which come from the inspection and the study of the precious treasures which are preserved in the National Museum, has decided, on the proposition of the Secretary-General of Public Instruction, to order that the Museum shall be opened from 10 A.M. till 2 P.M. on all *fête*-days. The example might be well followed in England, where the reasons for doing so would apply with double force to our overworked populations. The Giunta di Commercio of Naples has resolved on placing a bust of Cavour on the Exchange. This, together with a statue in the Largo di Castello, will be permanent records of the great man who has lately passed away. Already two masses have been celebrated, by the "Association of the Young Men of Italy," and the City, respectively. The latter came off yesterday in the Church of San Lorenzo, and was celebrated with great pomp,—the Lieutenant-General and all the authorities, civil and military, being present, besides a vast concourse

* Fenton's Photograph may be had at the South Kensington Museum, and there is a good reduction of it in Wood's Natural History, Vol. 1.

of the population. The church was decorated and arranged with great taste by M. Paris, being hung with black velvet, and relieved by medallions in white satin; in one near the altar was painted the likeness of Cavour, whilst those on the sides contained inscriptions commemorative of the deceased, and others bas-reliefs representing the principal events of his life. A very beautiful effect was produced by a transparency behind the high altar, in which the name of Cavour appeared in a rainbow. Another mass will be celebrated by the Giunta di Commercio in a few days; and to-morrow a *fête* purely Italian will be celebrated in the Museum of the Library in honour of their late President by the Association for the Mutual Assistance of Science, Literature, and Art. There will be an address, and music, and improvisations; and poets will in various languages give their inspirations to the public in honour of the great man. W.

OUR WEEKLY GOSSIP.

Mr. William Rite, M.P., President of the Royal Institute of British Architects, has issued cards for an evening reception, at the room of the Institute, on Wednesday next.

On the afternoon of the same day the Horticultural Society will hold their first Grand Rose Show at their new gardens at South Kensington.

A Rose Show will take place at the Crystal Palace this day (Saturday), with the ludicrous accompaniment of M. Blondin on the tight rope.

A very beautiful and attractive day closed, on Wednesday last, the series of flower shows given this year at the Botanic Gardens in Regent's Park. The collection of fruits and flowers—especially of fruits—was fine; and the company was very large. The beauty of these thoroughly English gardens seemed to be enhanced, rather than diminished, by the magnificent rivalry to which they are now exposed. Comparisons were rife, of course, and Regent's Park and Kensington had each its partisans. The choice between wild and regulated beauty in gardens is matter of taste and genius. We are glad to have in England two such specimens of the English and the Italian style.

The Fullerian Professorship of Physiology at the Royal Institution is vacant. The chair will be filled by election on the 12th of May next year.

The Town Council of Bolton, in Lancashire, is establishing a museum in connexion with the Free Library.

Mr. G. B. Bishop, in reference to our remarks on the services done by the Regent's Park Observatory, writes to correct a supposed mistake of ours, and to add a paragraph in illustration of one of our remarks. The supposed mistake is no mistake. The number of asteroids discovered up to the present time is seventy, as we stated, not sixty-six, as Mr. Bishop imagines. The latter paragraph runs thus:—"The tenor of your remarks in the same notice went to show that Mr. Bishop's observatory was established for *real* work, and had been especially signalized by the asteroid discoveries. It is only just, therefore, to mention that, besides the *ten* asteroids attributed to Mr. Hind, an eleventh, *Amphitrite*—the 29th following the order of discovery—was also detected there by Mr. Marth, on the night of March the 1st, 1854 (preceding only by one and two nights respectively the independent discovery of the same planet by Mr. Pogson, at Oxford, March the 2nd, 1854, and M. Chacornac, of the Imperial Observatory at Paris, March the 3rd, 1854). Thus, it will be perceived, that, of the sixty-six asteroids discovered up to the present time, *one-sixth* have been detected at the late Mr. G. Bishop's observatory: a fact which speaks most significantly, not only of the effectiveness of the plan of search adopted, but also of the ability and assiduity of the distinguished observers connected with it, and fully justifies and corroborates your assertion, that it was established for real work, seeing that the achievements through its medium have so strongly borne it out."

Mr. Hood, the son of the great humourist, is preparing an edition of his father's works, and would feel grateful, we are asked to say for him, to any one able to assist in rendering it complete.

Mr. Hood has not yet been able to trace 'The Two Swans,' many of the comic melodies, and some of the sporting papers contributed to *Nimrod*. There must be many admirers of Tom Hood who will be glad to assist his son in collecting the scattered fragments of his muse.

Mr. Joseph Boulton wishes to state that the financial condition of the Liverpool Academy is somewhat better than would be inferred from some of the figures put forth. He says:—"The Academy, though it has lost 900*l.* during the last three years, has a balance in hand variously stated at from 300*l.* or 400*l.* upwards."

Mr. Mayall publishes a series of photographs of eminent persons, of which that of Lord Derby, now before us, is the first example. It is a clear, sharp, but not very pleasant, portrait of the statesman; as a photograph, excellent. Messrs. Fairless, of Newcastle-on-Tyne, publish an engraving from a portrait of Mr. John Bright, painted by Mr. Lowes Dickinson, apparently several years ago,—we should say, about the time the original first took orders in political life.

The sale of the Tenison manuscripts, which took place on Monday, at the rooms of Messrs. Sotheby & Wilkinson, created quite a sensation. It was formed by the Archbishop during the reigns of Kings Charles the Second, James the Second, William the Third, and Queen Anne, and contained some articles of considerable note, as will be seen by the following quotations:—The Original Note-Book of Lord Bacon, entirely in his autograph and unpublished, full of curious and interesting details illustrative of the personal history of this great reformer of philosophy, 69*l.*—The Holy Bible, translated by Wickliffe, a manuscript of the fourteenth century, upon vellum, comprising a portion only of the Old Testament Scriptures, 150*l.*—Venantii Honorii Clementiani Fortunati, Presbyteri Italici, Versarium et Prosaice Expositiones Orationis Dominice et Symboli, a fine manuscript, Sec. X. or XI., 78*l.*—Higden's Polychronicon, translated into English by John de Trevisa, being the version used by Caxton, a noble manuscript, wanting a few leaves. It is preceded by two treatises, one entitled 'Dialogus inter Militem et Clericum,' and the other, 'The Defence, before the Pope at Rome,' by Richard Fitz-Ralph, Archbishop of Armagh, which latter has not been printed, 189*l.*—Historical Miscellanies, containing three pages in the autograph of Lord Bacon, 30*l.* 10*s.*—A charming volume, entitled 'All the King's Short Poesies that are not Printed,' with numerous alterations in the handwritings of King James the First and Prince Charles (afterwards Charles the First), 68*l.* 5*s.*—Keating's Three Shafts of Death, composed in the year 1631, and History of Ireland, in the Irish character, 20*l.*—a chronicle, called 'Flores Historiarum,' by that eminent English historian Matthew of Westminster, a manuscript of the fourteenth century, 63*l.*—Missale secundum Usus Sarum, a fine manuscript of the fifteenth century, with musical notes, 70*l.*—Prudentii Liber de Pugnâ Vitorum et Virtutum, cum Glossis, a wonderful manuscript of the tenth century, with eighty illustrations of a highly spirited character, executed in outline, and exhibiting great artistic skill in the powerful treatment of the various subjects, 273*l.*—Psalterium, cum Precibus, a most beautiful manuscript of the thirteenth century, by an English artist, with many thousand capital letters, various figures, devices and grotesque subjects, executed in gold and colours in the richest manner, 200*l.*—a curious collection of Theological Treatises in English, one of them being a discourse against miracle plays, a most singular relic of the kind known to exist, and said to be the only mediæval English treatise on such plays yet discovered, 35*l.*—divers Treatises in English, by Dr. Wickliffe, 37*l.* 10*s.*

The Commissioners of the Exhibition of 1862 have prepared an Alphabetical and Classified List of the Trades in the United Kingdom. This list, though avowedly compiled for the purpose of showing how each trade may be represented in the forthcoming Exhibition, possesses considerable interest from the extraordinary number and variety of trades enumerated. They exceed four thousand,

and although subdivided into forty classes, are so various that the Commissioners, with all ingenuity, have been unable to classify every trade. Nor is this surprising, when among the strange callings we find, Compounders, Fluters, Iron Liquor Manufacturers, Nail Dealers, Perchers, Rathe Makers, Shive Turners and Scribbling Millers. The very names of these are riddles, but even the classified list contains many trades which the majority of our readers have probably never heard of. The List, though confessedly imperfect, is yet, as compared with that in connexion with the Census of 1851, three times more voluminous. It is indeed not only curious, but highly interesting, in a politico-economical point of view, as showing the vast system of industrial processes carried on in the United Kingdom. We may add that the Commissioners have wisely decided that the List may be purchased for one shilling.

The Council of the Institution of Civil Engineers have awarded the following premiums for papers read during the Session 1860-61:—A Telford Medal, and a Council Premium of Books, to W. H. Preece, for his paper 'On the Maintenance and Durability of Submarine Cables in Shallow Waters,'—a Telford Medal, and the Manby Premium, in Books, to G. P. Bidder, Jun., for his paper 'On the National Defences,'—a Telford Medal, to F. Fox, for his paper 'On the Results of Trials of Varieties of Iron Permanent Way,'—a Council Premium of Books, to F. Braithwaite, for his paper 'On the Rise and Fall of the River Wandle; its Springs, Tributaries and Pollution,'—a Council Premium of Books, to G. Hurwood, for his paper 'On the River Orwell and the Port of Ipswich,'—a Council Premium of Books, to W. Hall, for his paper 'On the Floating Railway at the Forth and Tay Ferries.'

When we reported a few weeks ago on the Goethe Exhibition at Berlin, we expressed our opinion that this Exhibition might prove useful beyond its present aim and object, viz., the increase of the funds for the Goethe monument. An original letter from Goethe, of the 5th of February, 1810, presented by Bettina von Arnim to her son-in-law, Herr Hermann Grimm, and by him communicated to the Goethe Exhibition, brings us a little nearer the truth concerning the correspondence between Goethe and the "child." Not that this truth could prove a great piece of news to any one who has made Goethe's life and works his study; he will long since have discerned the truth from the fiction. But among the public at large, the belief that Goethe really had entertained a love affair with Bettina, and that Bettina was in reality the author of the beautiful sonnets in the 'Briefwechsel,' is still very much extant, particularly in England, we think, in spite of Mr. Lewes's clear and clever observations on the subject. The above-mentioned letter proves sufficiently how arbitrarily Bettina handled and altered Goethe's epistles to her, till they had acquired the tone and form which they ought to have had according to her poetical fancy. Frau von Arnim, as a poetess, loses nothing through this discovery; if we only make no claims in point of authenticity, the correspondence is as full of beauty, genius, fresh and tender grace, as it ever was. Yet we must not reproach Frau von Arnim too much for her want of sincerity; all those who knew more of this extraordinary, also somewhat eccentric, woman, are aware that she firmly ascribed all the sonnets to herself, a case of self-deception often to be met with in natures like hers, always eagerly, restlessly at work, till they no longer distinguish between the workings of their own mind and those of another. The real, genuine letters are still in existence, and in the possession of Herr Hermann Grimm (son of the celebrated *savant*, Jacob Grimm). A publication of these manuscripts would be the best means of settling the question whether we have truth or fiction in the famous book before us. But, for reasons of his own, Herr Grimm does not think himself yet justified in such a publication. In the mean time, let us enjoy the book as much as ever as a work of fiction, and let us, in this instance, exonerate Goethe from a participation in a love affair, as exceptional, singular and eccentric, as ever one was invented in the head and heart of a woman.

The Dutch papers announce the return of Prof. De Vriese from his expedition to the Dutch-Indian colonies. Prof. De Vriese, Director of the Botanical Gardens at the University of Leyden, was trusted three years ago by the government with an investigating expedition. The task was given him of examining scientifically the condition of all productions cultivated in India, with special regard to the European market,—of examining the goodness and possible improvement of the different soils, the cultivation of products over districts adapted for them, of improving these productions, and lastly of the possibility of introducing new species of products. Science in the nineteenth century is no longer the isolated, haughty personage, enshrined in its mystical, abstract grandeur; it is made useful and serviceable to mankind in all its branches. The result of Prof. De Vriese's researches, which promises to be curious, will be shortly published. For the present only a short account has been given of how and where he spent the three years devoted to his expedition. After a short stay at Ceylon, Prof. De Vriese proceeded to the island of Java, which had been named for his principal examinations, and which he explored in all directions, paying particular attention to the plantations of coffee and indigo, and contemplating the possibility of greater cultivation of cotton and cocoa. At the end of 1859 Prof. De Vriese started for the Molucca Isles which were to be examined, particularly with regard to cotton plantation. Prof. De Vriese visited Timor Coepang, Timor Delhi, the Banda Isles, Amboyna, the south coasts of Saparna and Ceram, as well as all the coasts along the Gulf of Elpapetu. The large plains bordering the broad Rouatta stream on Ceram, and the flats of Makariki were thought particularly fit for cultivation. Mynheer De Vriese then proceeded to Booro, which is considered fit for European colonization. On the isles of Ternate, Tidore, Halmahere, very fruitful plains were discovered. The island of Batjan was found important on account of its excellent coals. At the end of 1860 the interior of Java was again visited. Excursions to the north-west part of Borneo and the Palarig highlands of Sumatra were the last of this interesting expedition. The description of these islands, which have proved the grave of so many Europeans, and which have acquired such bad repute through their tropical climate, breeding fevers and reptiles in abundance, would be read with interest beyond the boundary of Holland, if the Dutch Government would allow the book to be printed in a language more generally known than the Dutch.

ROYAL ACADEMY OF ARTS, Trafalgar Square.—The EXHIBITION OF THE ROYAL ACADEMY IS NOW OPEN.—Admission (from Eight till Seven o'clock), One Shilling; Catalogues, One Shilling.

JOHN PRESCOTT KNIGHT, R.A., Secretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTY-SEVENTH ANNUAL EXHIBITION IS NOW OPEN, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.

JOSEPH J. JENKINS, Secretary.

THE NEW SOCIETY OF PAINTERS IN WATER COLOURS.—The TWENTY-SEVENTH ANNUAL EXHIBITION IS NOW OPEN, at the Gallery, 53, Pall Mall West.—Admission, 1s.; Catalogue, 6d.; Season Tickets, 5s.

JAMES FAHEY, Sec.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN daily from Ten to Six. Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Secretary.

GERMAN ACADEMY OF ART, EGYPTIAN HALL, Piccadilly.—The FIRST ANNUAL EXHIBITION OF PAINTINGS and WORKS OF ART by the most eminent living German masters, selected from the Royal Academies at Berlin, Düsseldorf, and Königsberg, is NOW OPEN from Ten till dusk.—Admission, 1s.

WILL OPEN THIS DAY, EXHIBITION of the EIGHT HISTORICAL PICTURES, painted by WILLIAM BELL SCOTT for Sir W. Calveley Trevelyan Bart., illustrating the History of the English Border, 'Building the Roman Wall,' 'St. Cuthbert the Hermit,' 'Venerable Bede,' 'The Descent of the Dove,' 'The Spur in the Dish,' 'Bernard Gilpin,' 'Grace Darling,' and 'Our own Day.'—French Gallery, 130, Pall Mall.—Admission, One Shilling.

SCIENCE

The Coal-Fields of Great Britain: their History, Structure and Duration. With Notices of the Coal-Fields of other Parts of the World. By Edward Hull. With Illustrations. (Stanford.) It was hardly wise to raise expectation by so

comprehensive a title, which would have better befitted an elaborate and exhaustive work than a small volume, in which the compiler presents the results of a diligent reading of existing materials on the subject, and carefully and creditably specifies his sources of information, without any attempt to do much more than give such results in statistical and geological paragraphs. These may, perhaps, be convenient to readers who have not other books, and who wish a summary of the facts and figures. But who would suppose from a title so pretending that the writer disposes of the most famous and productive coal-field in the whole country—that of Durham and Northumberland—in six short pages? Brevity might not have been blameable had the book borne some such title as its first chapter, 'Fragments in the History of Coal-Mining.' Possibly, however, the grand title was not given by the author, but given to him, and so does not fit him.

Even in the narrow limits prescribed, some law of proportion might have been observed. If a coal-field extending over seven or eight hundred square miles be despatched in six pages, how many should be allowed to one of fifteen square miles (Leicestershire)? The true answer would not be four pages, which, however, is nearly the proportion decreed by Mr. Hull; nor should another coal-field of ninety-three square miles in area (South Staffordshire) obtain nearly seven pages. The disproportionately small space allotted to the great Newcastle coal-field cannot arise from lack of materials, since no coal-field has been more extensively explored, and none is so full of interest. It alone would, if properly treated, have occupied more than the whole pages of the present publication. After this specimen the reader cannot be disappointed when he finds the notices of the other coal-fields of Europe, including those of France and Belgium, the Rhenish Provinces and Russia, done in two small pages; France and Belgium getting as much as a dozen lines, and the Westphalian, Saxon, Bohemian, Spanish and Swiss coal deposits combined in an area of about 4,000 square miles, and dismissed with three lines. Such are some of the 'Notices of the Coal-Fields of other Parts of the World'!

The author tells us, in his Preface, that he hopes "these pages will be found to accomplish faithfully the great object designed—to give the public an answer to the oft-repeated question, 'How long will our coal-fields last?'" Had he given such an answer satisfactorily, he would have performed good service indeed. All will remember the displays of ignorance on this question, or, at least, of great diversity of opinion, during the recent discussions in Parliament upon the Commercial Treaty with France. This ignorance was excusable enough, since inquirers knew not where to look for information. An article which appeared at the time in the *Edinburgh Review* afforded the details for the Newcastle coal-field, but not for the whole country. Mr. Vivian delivered a statistical oration, which aimed at the dissipation of prevalent fears of not remote exhaustion of our mineral fuel, by affirming that the South Wales coal-basin alone is capable of supplying the whole of England with coal for nearly 5,000 years; and now Mr. Hull comes forward with an estimate more moderate than Mr. Vivian's. He calculates our total area containing coal to a depth of 4,000 feet (which he assumes to be the vertical limit of coal-mining), as 3,711 square miles, and the total available quantity of coal within this depth as 59,109 millions of tons. He then adds, "Taking the annual produce of England and Wales at 60 millions of tons (the actual produce is 57 millions, but 3 millions

may well be allowed for the increase of future years), the above supply of coal will last for about 1,000 years."

Although this estimate wears an aspect of greater likelihood than the rough and random guesses of some, yet it does not take in the Irish and Scottish coal-fields, and to arrive at an estimate for our entire coal deposits—the only serviceable one in such considerations—the element of annual subtraction should be 71,979,765 tons. This is our present produce, and, when used as a divisor, would give a very different quotient from Mr. Hull's figures. While, therefore, we give credit to the present calculator for moderation in comparison with some others, we might have expected, when he vaunts the large means of information at his disposal in the maps and sections of the Geological Survey, the assistance of his colleagues, of Her Majesty's Inspector of Collieries and gentlemen of experience scattered throughout the country,—we might, with all this array of auxiliary authority, have looked for greater care and precision in the working-out of so interesting a problem. To name one instance of want of precision, Mr. Hull should have shown how his estimate of 1,000 years' future coal lease for all England and Wales is compatible with his anticipated supply from the South Wales coal-basin alone for 2,000 years "at the present rate of consumption." As it is, the reader has to find out, if he can, how, at the present rate of mining, one part of Wales will supply coal for the next 2,000 years, and the whole of England and Wales will supply coal only for 1,000 years! This, if true, would authorize a new axiom—a part is twice as great as the whole! No doubt the author's colleagues and the "gentlemen of experience scattered throughout the country" who have assisted him, will decline to indorse this new axiom, and no doubt the discrepancy is explicable, but not by an ordinary reader, and not on the supposition of the calculator's consistency; for, in both the conflicting pages, he has assumed the same amount of future supply from the South Wales coal-basin.

If we were discussing this topic at large, we should have a good deal to say in abatement of the higher assumptions of prospective coal-supply. That we have a great quantity of coal stored up in our several deposits there is no doubt; neither can there be any doubt that more than one-half of it is inaccessible to us by our present methods of mining, or, if accessible at all, not capable of being wrought at a profit. The vertical limit of coal-mining is not, we apprehend, even as large as Mr. Hull assumes, viz., 4,000 feet. Increase of temperature and pressure of superincumbent strata will, we think, interpose a barrier at little more than one-half of that number of feet. Not only natural barriers but also commercial ones interpose themselves. The cost of "winning" and working coal at excessive depths would be intolerable. One deep winning, near Sunderland, cost about 80,000*l.* before a farthing was returned. Expenses of maintaining mines in working order rapidly increase with the depth. The enormous pressure of the superposed masses produces curious and crushing effects below. Even at existing depths roofs and floors in old mines approximate, or, as the pitmen expressively say, "creep"; pillars of coal left for support give way, and wooden props fail to uphold. What pine-props would uphold a perpetually down-pressing mass of three or four thousand feet of rock? We have watched a man knocking down props at less than half this depth, and then running for his life to escape the immediate fall of stone. As mines now are, falls of stone from the roof are fatally frequent.

In creeping along the lowest and narrowest passages you stumble over masses already fallen, and occasionally hear other masses falling just behind you. At anything like 4,000 feet it might possibly rain down coal half the day. More than half the coal would certainly have to be left in pillars.

As to the sufferings of coal-mining humanity at such depths we can conjecture them from our own recollections of an hour or two in the deepest mine but one. In proportion as the interior of such a mine enlarges horizontally in the course of time, men who have to work far "in bye" from the shaft, labour under distressing discomforts, which we have personally witnessed and commiserated. Indeed, no one but an eye-witness and temporary fellow-sufferer can properly sympathize with these distresses. To write and do sums in Jermyn Street, and to creep and work underground at a depth of more than four times that of the height of St. Paul's in London, are totally different things. Whoever has done the latter will hesitate to take Mr. Hull's vertical extension of 4,000 feet, and decline, with a shrinking of flesh and spirit, to say with him, "Within that depth everything is possible." Everything possible within a depth about ten times that of St. Paul's! Will Mr. Hull stand in St. Paul's Churchyard, and mentally multiply St. Paul's from base to ball ten or a dozen times, and then stand to this dictum, which he has honoured with a separate line? Everything possible at this depth! What! drawing up coals, men and lads, horses and asses, living and breathing, hewing and hauling, in a temperature of 120°8 Fahr. (the calculated temperature at four thousand feet); ventilating and purifying, sweeping out bad air, pouring down good, erecting doors and "stoppings," and fifty other pit practices at depths exceeding the height of most British mountains! Even assuming the employment of subterranean winding machinery and inclined planes to do much of the deep work, still there must be men and boys to some extent, or where these are not, how is coal to be hewn? Consider, too, the increased hardness and density of the strata and of the seams of coal under pressure of 4,000 feet of superior masses. Calculate the augmented cost as well as difficulty of everything—of the propping, the pillaring, the pumping, the men's pay and their mortal peril, the loss of time, and the speedy wear of costly wire-ropes for four thousand feet—and then you will find no small impediments to sealing and stamping your one thousand years' lease of carbonaceous comfort (excluding Scottish and Irish coals)—without, at least, inserting a few covenants to repair, make good and insure, which Nature will never consent to and can never perform.

What then shall be said to those who speculate on penetrating to six or eight thousand feet, and bringing up coal from those depths? Such assumptions would try even the proverbial patience of "that grand old geologist, the patriarch of Uz" (Mr. Hull's professional compliment to Job). But they cannot be seriously treated, and they only find an appropriate refutation in the reported remark of a knowing Whitehaven collier:—"It's my opinion, Sir, that the earth is alive, and that she has a circulation through her veins; and I do believe if they go on cutting into the earth's vitals in this way, they'll some day cut the jugular vein, and then, Sir, you may depend upon it there'll be an end of this world!"

SOCIETIES.

ETHNOLOGICAL.—July 2.—J. Crawford, President, in the chair.—The following were announced

as new Fellows:—Lieut.-Gen. Lane Fox, the Rev. F. W. Farrow and Capt. Cameron.—A paper was read, by Capt. R. Burton, 'On the Ethnology of M. Du Chailu's Explorations in Equatorial Africa.'—The author pointed out the great resemblance of the social and commercial habits of the eastern and western races of Africa; their method of oratory is also very similar. Polygamy is rather a political than a domestic institution. Cannibalism was most prevalent where animal food is deficient. The languages of eastern and western Africa are of the same family, and some words are exactly similar. Fetishism is the religion among them.

ROYAL INSTITUTION.—July 1.—W. Pole, Esq., M.A., Treas. and V.P., in the chair.—W. Beckett, A. J. Ellis, H. Giffard and J. Neuberg, Esqs. were elected Members.

FINE ARTS

GERMAN ACADEMY OF ART.

At the Egyptian Hall, Piccadilly, will be found a collection of German pictures under the above title. Though it would be absurd to style it anything like a fair representative selection of the schools of Germany, or even of Saxony and Bavaria, it is interesting in more respects than one, having for its objects the getting together of a selection of, more or less, good pictures in a national style little known, and, it may be, not so well esteemed amongst our stay-at-home folks as it ought to be.

On entering the large room, the effect upon our minds is somewhat depressing, the mass of the works having a marked tendency to a certain dingy paintiness, which requires some careful examination before we can appreciate what actual merit there may be amongst them. Landscapes of the most opaque and heartless order of painting abound; glaring coarse productions that one turns from with feelings of pity for the blindness of the artist. Views of Florence that are sad to think on,—Constantinople in clay, Salerno in iron, Rome in timber,—pigment, pigment everywhere, and never a sparing of paint. Here and there is a grim, horrid, portrait-like "head-piece" looking as if it were done in stucco, or a Bible hero, with a countenance of pewter. Certainly these things should be removed altogether, and the collection reduced in numbers, or better pictures put in their places. Still, there is enough of another stamp to reward a visit to what we look upon as a good idea, not properly carried out, but which is capable of being, in efficient hands, a great success. Let us consider the figure pictures first.

Monks surprised in a Convent Library (No. 77), by A. Ewald, is surely misdescribed in the Catalogue: the subject is rather a group of monks—well designed enough—who are gathered round about the great main pillar, discussing a manuscript and calling for a volume by the hands of a librarian who is in a gallery above them. This work is painty and heavy. The subject has something that might be made interesting. We are often surprised to find how little artists direct their attention to the picturesque incidents supplied by monastic life. Is it that they do not read? It is surprising that among the numbers who have studied Mr. Carlyle's 'Past and Present' none seem to have found a theme from the life of brave Abbot Sampson, or have credited garrulous Jocelin of Brakelond with their inspiration. Yet how picturesque, how truthful, how moving, often how humorous, are the incidents the monk of Bury gives us!—*Bivouac in Wallenstein's Camp* (83). A tawdry, bronzed, Bohemian woman dances before a couple of officers, who are seated at ease by their tents. She poises herself heavily on a globe, decorated with a map of the world, and marked "Fortune." She claps her castanets, casts out her loose robes and lavishes her sunburnt charms. A half-naked boy accompanies her with a triangle, and a sturdy gipsy performs on the violin. The artist of this work is Herr Fritz Schultz.—*Latimer and Ridley going to Execution* (87), by H. Schweder, has both power and expression, and considerable academic skill is displayed in its production; but it is heavy despite its breadth of treatment. The

countenances are not a little Israelitish in character.—*Mozart and his First Love* (93), by A. Borokmann,—the composer seated at a piano, the lady turning over the leaves of music,—is designed with great freedom and some grace and spirit, but is rather careless in execution.—*A Solitary Walk* (109), by W. Amberg,—a lady promenading in the shadows of a wood of vast beeches, and leading a dog,—is painted with great truth, much breadth, and powerful treatment of the sunny softness of the time chosen. A similar picture, by the same painter, is *Reminiscence of Past Happiness* (10),—a lady dressed in black, examining the initials of two names that have been carved in the bark of a beech-tree, which, like time, has severed the entwined letters with its growth. This is almost equally good.—With much feeling for character, and some considerable power of rendering expression, H. Sonderman's *Domestic Happiness* (28),—a German housewife bringing her child to her husband,—is heavy and painty to a painful degree.—A curious example of a cognate style to that adopted by Fuseli, and probably originated by him, is *The Old King seeking to sooth Conscience at the Eleventh Hour* (30), by the late Prof. Begas, of Berlin. The monarch seated on his throne, surrounded by some of the most ridiculous-looking courtiers humanity ever conceived; the whole treated in a coarse and vulgar manner, excepting the King's face, which is truly a fine study of expression, as he looks with wide, staring eyes from amongst the wild elf-looks of his hair and beard hard upon vacancy. The execution of this face, also, is excellent.—*The Electress Elizabeth of Brandenburg surprised by her Husband, Joachim the First, while secretly taking the Sacrament* (2), by Prof. Rosenfelder, is a large and pretentious picture, which, to some extent, justifies its claims to attention by a broad and powerful system of handling and considerable vigour of design. The lady kneels before an extemporized altar, at the priest's feet, while her amazed husband bursts in behind. This is solidly painted.

The Sands of New Werk, at the Mouth of the Elbe (85), by H. Eschke, a shelving sand over which the sea spends its force in keeping full numerous shallow pools. A burst of greyish silver light holds the centre of the sky, which is otherwise covered with ragged and torn clouds of black and tawny blue; the turbulent waves dash ceaselessly at the foot of a fixed beacon, which is on the margin of the sea, looking like a gigantic and naked spire of a church. There is much motion and expressiveness in this picture, which is otherwise conventional enough in treatment.—*Jung Frau* (86), by C. Seiffert, the famous mountain-top, capped with rosy snow, multitudinous pines gathered about the valley, in which a brawling torrent pours itself away, spanned by a rustic bridge. This is characteristically heavy in painting, but otherwise very good. *Cattle at a Brook; in the Forest of Fontain* (91), by E. Ockel, certainly rather French than German in style, is bright and lustrously full of soft light. A cow-herd blows his horn, calling his charge together; through the avenues of the wood. There is much feeling for nature displayed in the treatment here, but it is after the low-toned French manner.—*Loading Hay, by a Canal* (90), by Bennewitz von Loeven, is quite a contrast in style to the last named, being hard, though bright and clear, and solid with strength of effect and decisive handling. Dark hay-barges are being loaded by the banks of a still and glittering canal, under a calm repose sky, bright and pure; against which, the time being evening, the masts and black rigging of the craft tell opaquely, while in the foreground all is dark, yet clear and strong. The whole look of this picture is creditable to the painter; and notwithstanding some want of purity of touch here and there, he undoubtedly loves nature and can paint her well, for force and tone as well as colour.—*Convent of St. Benedetto, near Subiaco* (99), by Valentine Ruths, lacks strength of colour and richness of tone, at least for the key attempted, but is, nevertheless, much above the common run of pictures so failing. A rocky mountain-side, covered with sparse bay and grey olive trees, ranges of hills and the convent in the distance.

—*Le Mont Orgueil, Jersey* (4), by H. Eschke, shows effective treatment and force of tone.—*A Beech Forest* (18), by Bennewitz von Loefen, with its stark stems and standing tawny pools at their feet, is vigorous and poetically suggestive.—*A Farm-house*, by the same (22), is equally telling, as is No. 40, *Landscap*, an avenue of trees; in a wild hedge a cottage, and rough, bright grey sky. There is feeling for colour shown in all these, but of a coarse kind.

The Landseer of wild swine, the Count von Krockow, has a little picture here, *Wild Sow and Young* (101), a mother and her grunting and squeaking offspring, trudging sulkily along a rough wood-road. The glittering, queer-eyed brutes, with their "embattled" backs, and tufty, mat-like hides, are well given. A little brown sucker that goes first is quite comic in his cross-grained look. *Sorrowing Maternity* (7), by Prof. Steffek, a mare looking at her dead, starved foal, with miserable eyes staring over the waste laid about her, in vain seeking help, although disproportioned, is expressively effective. *A Team of Bullocks, harvesting* (21), by T. Schmitson, is good for coarse power of rendering brute energy and action. There is a similar gross spirit and vulgar vigour in *Hungarian Horses at Play* (33), by the same, a number of half-wild horses romping in their mad fashion with some savage and snarling dogs, who do not seem to comprehend the game that brings the heavy and swiftly-flying heels so unpleasantly near their own long rows of white fangs.

FINE-ART GOSSIP.—Mr. E. Davis has just completed the model for a statue in bronze of Wedgewood, the great potter, to be erected at Stoke-upon-Trent. This is eight feet high, and will be placed in the square facing the railway station of that town, upon a pedestal eight feet high. In a few days it will go to the foundry, and the end of the year will probably find it placed, to commemorate the ardent, persevering Englishman it represents with great fidelity and singular power of characterization. The facial likeness has been derived from Sir Joshua Reynolds's portrait; it has that peculiar quality of look which at once tells the observer that the resemblance is perfect. Mr. Davis has designed the work with great simplicity, to which the broad masses of the wide-lappelled coat and waistcoat of the last century effectually conduce. The figure is standing upright, with a model of the Barberini Vase in his hand,—in the attitude, and with the expression, he may be supposed to have assumed when addressing the Royal Society upon its beauties. The other hand is raised, the fingers slightly apart. The expression of the face is well aided by this action, as of speaking to such an audience. The design does the sculptor honour not only for this appropriate and telling choice so fitting for the situation the work will occupy, but for its solid, manly and easy grace. Stoke-upon-Trent will gain a great attraction when the statue is placed. It has cost the sculptor, we believe, a re-designing of the whole figure, to meet the wishes of the Committee. The expense of this, of course, a very serious item, will not fall upon Mr. Davis, we trust, although no provision for such a contingency appears to have been made in the original contract. It is worth all the more that the hideous and stupid stump, or dummy altar, so common in marble statues, is avoidable in works in bronze, and has been cleverly dispensed with by Mr. Davis in the present design.

Mr. Watts is engaged upon a large fresco painting, over the chancel arch in the church being erected by Mr. Street, in Upper Garden Street, Westminster. The subject of the picture is illustrative of the verse, "Come unto me all ye that are heavy laden, and I will give you rest." The artist has to contend with considerable difficulties, but is making very satisfactory progress with his subject. —Mr. Layard stated in the House of Commons, on Monday last, that Mr. Watts is willing to repaint the fresco executed a few years since by him in the lobby of the House. It is to be wished that some of the other artists, whose works are in a similar condition at the same place, would

offer to do likewise. We have reason to believe that more than one of them will undertake as much.

The foundation of the Wallace Monument was laid on the 25th ult., at Abbey Craig, Stirling, with much public rejoicing and ceremony. The monument consists of a lofty tower, in what is called the Scottish Baronial style, whatever that may be, 200 feet high, and 38 feet square at the base. From its site many of the scenes of the Scottish hero's feats may be discerned. General Sir Maxwell Wallace, representative in the male line of the champion, was present at the ceremony.

The Report of the Examiners of the works sent from the various schools of Art in competition for the national medallions awarded by the Department of Science and Art lies before us. As relates to the Art-Department, 503 works were sent in, an advance on last year both in number and quality. The Report states that the largest number of works is shown, and in the earlier stages of the course these severest competition takes place; as might be expected, many of these have been found worthy of reward. In the section when the student's attention is directed to the study of natural forms, "foliage and flowers from nature," wherein he first may be said to exercise his own intelligent observation, the number and excellence of the works are a satisfactory evidence of the value and success of the earlier and drier studies of the pupil. Having ourselves seen and examined most of the works here referred to, we can personally indorse this statement; and we consider that, presuming one of the objects of the system of teaching is to make good and accurate draughtsmen from such natural themes, the plan of instruction fully answers its purpose. We must guard ourselves, however, from saying it does, or does not, fulfil the higher requirements of an Art-school for manufacturing design. The Reporters state that the life-studies continue insignificant in number and with little of marked excellence, notwithstanding that in all schools at least careful studies may be made from heads and hands, even if the whole nude be not everywhere available. Though we ourselves believe the difficulty of obtaining the latter to be affected or imaginary, other impediments may weigh. The class of studies of ornament calls for the special and encouraging comment of Sir C. Eastlake, and Messrs. J. C. Horsley and R. Redgrave, who sign the Report. Appended are the names of the winners of the above referred to medallions. In the provincial schools those rewarded are as follows:—Stoke: Messrs. H. Allen, J. Bishop, J. Edwards, M. R. Eldon, J. F. Marsh, J. Parr (the third and fourth of these have already twice, and the fifth and sixth of these have been once previously successful in the like competition).—Birmingham: Messrs. J. Beesley, S. Lees, W. H. Small, E. Walker and Miss M. A. Preston. —Manchester: Messrs. G. O. Bird and H. Meeham. —Worcester: Mr. J. Bly (once previously rewarded).—Aberdeen: Mrs. J. Booth and Miss C. Campbell. —Newcastle-upon-Tyne: Mr. T. G. Bowman. —Spitalfields: Mr. W. Casson. —Liverpool (Southern District Schools): Miss S. Collins. —Liverpool: Miss E. Gammage (once before rewarded) and Miss M. M. Pow. —Wolverhampton: Mr. T. Cox. —Bristol: Mr. W. H. Cowlin. —Glasgow: Mr. J. Dingwall. —Devonport: Mr. J. Dominy. —Dundee: Messrs. J. Dundas and W. Walker. —Hanley: Messrs. E. Dunn (twice before rewarded), W. Hawkins, W. Hulme (once before rewarded), R. Mellor and A. Wright. —Chester: Mr. S. Fildes. —Southampton: Mr. G. Gouk (once before rewarded). —Dublin: Miss H. E. Harman (once before rewarded). —Paisley: Mr. C. Hays. —Nottingham: Messrs. A. Hill (once before rewarded), H. Hood, S. D. Osocroft (twice before rewarded), H. L. Roberts (the same). —Macclesfield: Messrs. A. Horobin, H. Johnson (once before rewarded), T. H. Rathbone. —Coventry: Messrs. F. Hunt and F. Rose. —Waterford: Miss E. Jones (twice before rewarded), Miss M. Moore, Miss Elizabeth Smith and Miss Emily Smith. —Limerick: Mr. W. Langley. —Cambridge: Miss A. Lenton. —Lambeth: Mr. J. J. Oxer. —Bolton: Mr. J. Proctor, Miss P. Taylor (once before rewarded). —Sheffield: Messrs. H. H. Stannus (twice before re-

warded) and E. P. Turner (the same). —Halifax: Mr. R. I. Stevenson. —Warrington: Messrs. J. H. Veevers, J. Ward. —Exeter: Miss A. Westmacott. —Taunton: Mr. J. Willis. —Newcastle-under-Lyme: Mr. W. Woodwiss. —Darlington: Mr. J. Woodward. —Yarmouth: Mr. T. W. Wright. —Edinburgh: Miss A. Young. —Greenock: Mr. W. Yuill. —South Kensington, Male Training School: Messrs. A. W. Davis, C. Horsfall, S. Le Resche, S. Long, T. Morris, R. P. Notley, G. R. Redgrave and E. R. White. Female School: Miss H. Bradford, Miss C. Edwards, Miss C. M. Hull. —Miss J. K. Humphreys, Miss H. J. A. Miles and Miss A. Ridley. Numerous students of various schools obtained honourable mention.

MUSIC AND THE DRAMA

CONCERTS OF THE WEEK.—This week little more than a list of the Concerts, which have been given by *Herren Deichmann, Wilhelm Ganz* and *Lidel, Signori Piatti* and *Regondi*, in succession, can be given. The position of all the above artists is by this time so well ascertained as to render discussion of their merits superfluous at a time when so many are beginning to weary of hearing about or hearing music. —A note of admiration, however, is demanded by Signor Regondi's enterprise in having obtained from Herr Molique another *Concerto* for the concertina. What is more, its composer must have been in his happiest vein when the work was written. It is flowing, brilliant and tuneable, and of a moderate length, and must rank among Herr Molique's very best solo music. It was, of course, admirably played.

The concert of *M. Silas* cannot be so briefly dismissed, if only because his position is not so well ascertained as it ought to be. He is a real, earnest, and often an interesting composer;—much of his music, whether in the strict or in the free style, is far better worthy of being taken up by our pianists than the flashy arrangements of opera and national airs, with sauce à la Thalberg, to which their timid renderings of modern music seem to be confined. For instance, the "transcript" by M. Silas of a melody by Glinka, or the original Tarantella played by him on Tuesday, are both worth attention. It is long since we have heard so excellent a Pianoforte Trio as the new one in C major which opened the second act of his concert. It is brilliant, clear, based on new thoughts, which are treated in an unhackneyed fashion. The *scherzo* was *encored*; but we preferred the opening *allegro* and the *andante*. The *finale* seemed to us a little *baroque*; if we give it "the benefit of the doubt," it is because the playing of M. Silas is hard and wanting in grace,—anything rather than calculated to set off his compositions. To the latter we would direct the attention of professors and amateurs.

The Concert of the *Society of Female Musicians* took place duly on Tuesday,—as did that for the *Society of Female Artists* on Thursday. Here Madame Goldschmidt was to be heard, and liberally; her services never being given by halves. —Never during her career did she sing in better voice nor with finer finish than on Thursday. She has benefited by repose,—her feeling was always on the side of expression; and the idea of being Queen of the *fête* seemed to inspire her with an increase of every well-known power to charm her audience. A long-drawn song from Handel's "Susanna"

Without the swain's assiduous care,—an excellent rendering of the *rondo* from Mozart's "Il Rè Pastore" (with Herr Deichmann as violin *obbligato*), besides other music, attested this beyond question. Why she should not still enter on a career, without inordinate *prestige* or pretension, as the first living *soprano*, but with success enough to keep warm the heart of any female artist, rests with her own will to decide. She was ably supported by Signori Giuglini and Belletti, by Herr Otto Goldschmidt on the pianoforte, and Signor Piatti, the best of living violoncellists.

Ere taking leave of what may be called the benefit concert season, we must point out the good

service done to all concerned by the presence of Signor Gardoni, who has been in request everywhere.—Here, too, Madame Lemmens-Sherrington must receive a caution. Dramatic sprightliness does not mean exaggeration. The shadow-scene of 'Dinorah' was not written to be shouted or whispered, though it is an echo song.

The *Popular Concerts* came to an end on Monday; so did *M. Halle's* Beethoven series yesterday. Of these, we may yet offer a word—and of the third concert of the *Musical Art-Union* a detailed report—next week.

ROYAL ITALIAN OPERA.—Seldom is an epithet so well deserved as is the one which heads this paragraph. The performances at Covent Garden Theatre are for the most part "royal" in their completeness.—Whatever be thought of this or the other individual artist who appears there,—the union of choral and orchestral force, and care bestowed on the scenic portions of the operas given, distance anything of the kind till now enjoyed in this capital, and to be found in any other metropolis at the time present.—The extent to which this made itself felt on the production of Signor Verdi's 'Un Ballo' would be hard to exaggerate. We are absolved from the necessity of returning to the dry and superficial music of this opera, and have only to speak of the cast.—Madame Penco has not till now been heard to so much advantage as in the part of *Amelia*. The inevitable comparisons which her singing and acting provoke when the part appeared in belongs to the old grand repertory, tell, in this new case, to her advantage. As coming after the unmitigated force of Mdle. Tietjens, her vocal sensibility and finish were welcome.—That the page *Oscar* by Madame Miolan-Carvalho was to be good, must have been expected by all who have seen her *Cherubino*. Pity, that Signor Verdi is not a Mozart!—and that she has to fight for lean and characterless phrases in place of expressing the beautiful melodies of a great master. She has listened to counsel, it would seem, and, by not forcing her voice, filled the theatre and gained a success, without the slightest failure of intonation.—Madame Nantier-Didée is a portentous sorceress, and does the best for the insignificant music of the character.—Signor Mario is, this season, bewildering (no other word will do) as compared with what he has been of late years. He would appear to have no more need to manage his voice,—no more fear of its betraying him,—no more misgiving,—no more stint,—but to fling himself into the action and singing of every part, with as much young enterprise as if "the world was all before him where to choose."—Signor Graziani has a better voice than Signor Delle Sedie; but the latter is preferable as *Renato*. The picture-song is essentially paltry as a song (in spite of the tricks and harp-tinklings of its orchestration) unless it be given with dramatic contrast—no question of *forte* and *piano*—but of feeling for the situation. Signor Graziani gives out his acceptable notes with grace, and gets his *encore* thereby.—Signor Delle Sedie sings to the picture.—On the whole, though new Italian operas, which any English hearer will admit, are scarce, we conceive that Signor Verdi's last will not plant itself on our stage even for such a short and already-exhausted life as that of his 'Il Trovatore.' The performance, however, was received with every sign of favour, and—as a performance—deserved to be so received.

The last representation of 'Guglielmo Tell' for 1861, was too superb and ripe in point of execution to be passed over. The opera is now solidly established in England, so long at least as Signor Tamberlik shall last. That this comet-season is assuredly favourable to tenors, Signor Mario has shown us. On Tuesday, Signor Tamberlik sang, like "a giant refreshed with wine"; and the trio, thanks in good part to M. Faure, never produced so great an effect, not even in the memorable days when it was given by Rubini, Lablache and Tamburini. In the final war-song, he is only exceeded by M. Duprez; whose greater heaviness of style gave to it greater brilliancy. Without some such tenor, the opera has never been successful,—owing to the tiresome weakness of the *libretto*—with such aid, it has nowhere been profit-

able to any treasury in proportion to its merits; and some of our contemporaries seem to be unaware that nowhere has it been so frequently performed, in so short a space of time, or excited so much enthusiasm, as this year, on its "royal" revival at Covent Garden Theatre.—It is much to be wished that Mr. Gye would be "spirited up" to give 'Moise' another trial next year. No scandal against M. Meyerbeer,—these two operas by Signor Rossini will outlast 'Le Prophète' and 'L'Etoile,' in spite of the superior dramatic subtleties of the latter.

It is now to be seen how far Mdle. Patti is qualified to prove a fixed, as distinguished from a shooting, star; and accordingly she is to be heard, during the few weeks of the season which remain, in some new parts, as *La Traviata*, *Zerlina*, it has been said, too, *Dinorah*,—in which case an attractive novelty will be given to the cast by M. Tamberlik taking the part of *Corentin* the coward.—It may be observed, too, that the young lady, a few evenings since, at the Royal Concert, sang an air from Mendelssohn's 'Elijah' and an 'Offertory,' by Hummel, thus making it evident that she affects a repertory wider than that of the three or four operatic parts parrotted by hearsay tuition, on the strength of which certain of her predecessors have, for a time, deceived their public.—Due credit is to be given for this, especially by the few, like ourselves, who have not been carried away by the flood of rapture which burst forth on Mdle. Patti's first performances.—Of her new attempts, we must speak on a future day.

STRAND.—When, instead of consulting his own taste, a popular dramatist attempts to please an audience which has been proved to tolerate noise and bustle in a play, instead of wit and sentiment, he is in danger of underrating his public and making a mistake. Mr. T. J. Williams was probably convinced of this fact last Saturday, when another new farce of his, entitled 'Peace and Quiet,' was produced. It appears to have been the purpose of the author to give to Mr. J. Clarke the widest latitude for his extravagances. The plot is well calculated for this result. *Smashington Goff*, a law-student, is opposed to a nervous house-keeper called *Twitterly Fluttersome* (Mr. James Bland), who is seriously annoyed by his new lodger, whose penchant for playing on the cornet is intolerable. In other respects, also, he is a general nuisance, and excites the whole establishment against him. It is useless that he is expelled by a carpenter who happens to be on the premises; he returns by the window, and continues his noises long after the inmates have retired to rest. His immediate object is to serenade *Miss Fluttersome*, who has saved him from peril in a water excursion near Battersea Bridge. We should have premised that the hero is the so-called coxswain of the Thames Boat Club, and, therefore, esteems himself a man of consequence. After bringing the ladies on the scene in their nightgowns, and subjecting them to rather too familiar treatment, Mr. S. Goff gains his object, and is accepted as the poor heroine's future husband. As we have hinted, the success of the piece was not very decided.

STANDARD.—M. Jules Samson, the French actor, made his first appearance at this theatre on Thursday week, in 'The Courier of Lyons,' in the twin characters of *Dubosc* and *Leurgues*. He speaks English with a slight accent only, and well discriminated the two parts. But his style is not so demonstrative as East-End audiences require, and he certainly did not make the impression expected. There can be no doubt he is a clever and elegant performer, and might, under other circumstances, and in another place, have succeeded better. On Saturday, Mr. Creswick, the favourite actor and lessee of the Surrey Theatre, commenced a starring engagement in the tragedy of 'Virginius.' As this is the first time that Mr. Creswick has appeared at this house, he may, with his undoubted talents, be regarded as a novelty likely to attract. He was, indeed, enthusiastically received, and played the Roman father with exemplary care, and occasionally with great power.

Mr. Creswick is fond of picking out the more poetical passages, and setting them, as it were, in an especial framework; and he seemed to us on this occasion to be more solicitous than usual in marking his preferences; at any rate, his efforts in this kind evoked repeated applause. The manner of receiving his daughter's death had remarkable force, and literally brought down the house.

MUSICAL AND DRAMATIC ART.—A paragraph in this week's *Observer* calls attention to the decayed state of our Royal Academy of Music,—and an appeal put forth by its Council in an Annual Report, which has been forwarded to the *Athenæum*, cries aloud for help and sympathy, confirming the tale without exciting our pity or astonishment. For such a consummation no person of sense can have been unprepared.—The tenacity of life in weak bodies is surprising; or long ere this an institution so fruitless of good must have closed its doors. One more incompetently managed is not in our knowledge; and we have for some years forborne remark or remonstrance on its proceedings from conviction of the vanity of expecting any result from the most temperate criticism.—The Academy from an early period has been virtually a toy in the hands of a few amateurs;—the story of the successive schemes of mismanagement introduced there, illustrated by a list of teachers who could not teach, and pupils who learned nothing, would be a useful one; howbeit it must be unpalatable to the self-love of the Directors.—It has been reported that schemes have been proposed for infusing new life into it; but we have always held with Signor Costa in his pithy remark, when the subject was brought before the Society of Arts a couple of years ago, that "it is no use to mend an old coat"—that there is no task so hard as to restore confidence when the same has once been forfeited.—Let the Academy perish of its inanity; and we believe that a new school on a liberal plan and comprehensive basis might easily be founded to enjoy a large share of public sympathy and encouragement.

Speaking of new plans, we are at liberty to advert to "a preliminary Prospectus of the English Opera Association," which has been placed in many musical hands, and on which we should have commented more precisely some time since had not the words "private and confidential" appeared in print on the cover. That embargo has now been removed; "privacy and confidence" having been found (as mostly happens in such cases) untenable. Without dragging names into publicity, it may be said that the list of the "Provisional Committee" stated to have been appointed is not satisfactory. The scheme of a joint-stock company has not hitherto worked well for Music. This time it is started with more than average feebleness, and "the start" is to be deprecated because it amuses those who may be disposed to take an interest with an idea that "something is going to happen," and thus adjourns every healthy chance of any good thing really happening.

Something novel and promising was to be seen and heard this day week at the New Horticultural Gardens, telling of time and change with pleasant emphasis.—What would the old watchmen, who made night sleepless by their droning bawl,—who protected nobody,—who took every imaginable *placebo*,—have said of a London amateur police band?—Yet such things exist in these days. Those of a force to whom our safety is so much indebted have their leisure for amusement, and have amused themselves by study of a charming art. Divisions G. and H. play fairly well. The music of the Police Band is good (under allowance); its existence at all is a better thing still.—The contest of the provincial brass bands will take place at the Crystal Palace, on the 23rd and 25th of this month. Four prizes are to be given: three of these are instruments ranging in value from eighteen to twenty-five guineas. Upwards of a hundred bands intend to compete: many of them belong to Volunteer Rifle Corps.

Even at this advanced period of "the spring" artists from abroad are still arriving. One of the latest is Fräulein Agnes Bury, who sang in London,

it may be recollected, some years ago. She has appeared at the Lyceum operas as *Marguerite* in 'Les Huguenots' to the *Valentine* of Mdlla. Tietjens.

The 'Correspondent of the Times' states that Signora Galletti, a lady whose name has been already mentioned here, is successful at Naples.

Difficulties have arisen (German journals say) which may prevent the production of Herr Wagner's 'Tristan und Isolde' at Carlsruhe. From what is known of the music and the story, or the story and the music, or the no-story and the no-music, the difficulties, we fancy, are only the inevitable consequence of an unmusical system of thinking and writing. The sooner this can be understood the better for Germany, if German creative power in music is to be saved.

There is to be music at Brussels, during the September annual festival,—directed by M. Fétiis:—on the first day a Beethoven Symphony and scraps from Handel's Oratorios; on the second, a concert of solo music, executed by Madame Lemmens-Sherrington, MM. Lemmens, Vieuxtemps, and Servais; all four Belgian artists.

Signor Pacini, now a veteran, having been born at Syracuse in 1796, who has probably written more operas for the Italian stage than any man living, who still holds on there, and whose 'Niobe' Rondo has made the tour of the world, and will keep his name remembered, is about to give another opera to Florence—'Belphegor.'

The "art of sinking" receives new illustrations month by month in the Paris theatres. The fount of invention must be drawn dry ere the *Ambigu* could have recourse to a revival of a translation of 'Frankenstein'—our melodrama, founded on Mrs. Shelley's romance—and presented at the *Porte St. Martin* thirty-five years since, with Mr. T. P. Cooke as the *Monster*.

On Saturday next it is announced that 'The Colleen Bawn' will be withdrawn, not because its attraction is on the wane, but because Mr. Boucicault has determined, and we think wisely, to stop its run for the present. The continuance, for a long period, in one part, is no doubt injurious to the actor's health; and it is but natural, under the circumstances, that he should desire repose. At the same time, he has more than one company at provincial theatres, acting his play, and from each of them is in nightly receipt of profits. The amount of his winnings is stated at a figure that we scarcely like to indorse; but that the sum is large, amounting to several thousand pounds, is universally agreed. His, too, is a rare instance of the author's benefitting by an extraordinary run as well as the manager—a result owing to the peculiar arrangement made previous to its production. That arrangement, it must be also remembered, was based on the fact of the author being the actor in his own drama; and illustrates the advantage of such a union. Commencing in accident, a new system, of which Mr. Boucicault will be the immediate *bénéficiaire*, will thus to a certainty establish itself; and it may be that the present is but the first of a series of successes. Measures are taken for establishing the system in reference to other plays of Mr. Boucicault, expected also to prove profitable. We could have wished that the dramas had been of higher mark and aim; but, apart from this, it cannot fail of being beneficial to the true interests of the drama that the author should be in the ascendant. His subordination hitherto to the actor and manager has been the source of much mischief, and the real cause of the inferiority of the acted drama of the day. The emancipation of one man from the necessities implied is an earnest of better things for all. The example will inspire laudable ambition, and revive hope in many bosoms wherein it had well nigh perished. It is a blow struck bravely and opportunely in favour of talent, depending on its own resources; and asserting its rights to the pecuniary advantages involved in its successful exercise.

TO CORRESPONDENTS.—S. N.—Constant Reader—E. S.—J. F.—J. H. P.—J. S.—J. B.—received.

No. 1. THIS DAY, July 6, price Twopence.

"I DESCRIBE ALL THAT'S DONE BELOW THE MOON."
Ben Jonson's *Robin Goodfellow*.

"ROBIN GOODFELLOW": A Weekly Journal of Fact and Fiction.

Conducted by

CHARLES MACKAY.

Published every SATURDAY MORNING, price Twopence.

Another new Journal! Why not? The world is wide—and there is room enough for every one to elbow his way to the platform, where he may address the people; certain of an audience, if he can speak common sense in good English, and keep them in good humour. This is what the Editor and Contributors of "ROBIN GOODFELLOW" aspire to do. They will avoid all politics—all controversies—and all acerbities; and strive to provide for the recreation and instruction of their readers, the best Novels and Tales—the ablest social Essays—the richest and most truthful Sketches of Life and Manners that the Literature of the age can produce, or that the money of the Proprietors can purchase. Like that "shrewd sprite" honourably mentioned by Shakespeare, Ben Jonson and Milton, from whom the new Journal has borrowed its name, "ROBIN GOODFELLOW" will not invariably confine himself to the amusement of his readers, but, upon occasion, will turn his hand to useful work. Though, as Shakespeare informs us, Robin Goodfellow could sport, he could, also, do hard work in case of necessity; and, as Ben Jonson states, "would card wool," "grind at the mill," "dress hemp," "spin tow," and perform other useful functions for the benefit of ignorant or indolent humanity, whenever he was in the humour. And our new "ROBIN GOODFELLOW" will, in this respect, imitate the example of his namesake; and aid, wherever he can, the cause that needs help, without ever losing sight of his other function of telling the tale, and singing the song, and being the genial and welcome friend at the fireside or study of every family in the Kingdom.

"ROBIN GOODFELLOW"

Will be published EVERY SATURDAY, price Twopence, at the Office, 122, Fleet-street, London, E.C., where all Letters and Communications for the Editor are requested to be addressed.

This day, price 2s. fcap. 8vo. ornamental boards,

TALES IN THE CABIN; Or, Nights on the Ocean.

By A SHIP'S SURGEON.

Also, by the same Author, price 2s. fcap. 8vo.

MAIDS OF HONOUR: a Novel. By FOLKESTONE WILLIAMS.

London: Kent & Co. Paternoster-row.

THE AMERICAN WAR OF INDEPENDENCE.

New ready, fcap. 8vo. pp. 264, elegantly printed by Whittingham, cloth, 6s.

POEMS by PHILIP FRENEAU on Various Subjects, but chiefly illustrative of the Events and Actors in the American War of Independence. Reprinted from the rare edition printed at Philadelphia in 1786, with a Preface.

Exceeding clever and witty, it deserves a place on the shelf with the 'Poetry of the Anti-Jacobin,' the 'Whig Guide,' and 'Rejected Addresses.'

London: J. Russell Smith, 36, Soho-square.

HANSARD'S DEBATES.—Session 1861.—

The Reports of 'Hansard' for the current Session, containing the Debates to the Easter Recess, are now published. The subscription to 'Hansard' is 5s. 6d. the Session. The Publisher has for sale a few complete sets of 'Hansard,' of which the 'History' is a collection of documents, records, and debates from the Conquest to 1803; the 'Debates,' contemporaneous reports of the debates from 1803 to the present time. Also sets commencing with the Reformed Parliament or with the reign of the Queen.

Cornelius Buck, Publisher of Hansard's Debates, 28, Paternoster-row, E.C.

Price 5s.

ROSA'S SUMMER WANDERINGS, containing Descriptions of Scenery and Historical Memories in Cumberland, Westmoreland, and Yorkshire; Biographical Sketch of Southey, &c. &c.

By ROSA RAINE, 'Flora's Eccelesia,' &c.

'Rosa's Summer Wanderings' is a useful and pleasing combination of topography, history, and poetical description:—a visit to the Lakes is made the occasion of an interesting account of Southey and his family. —*English Chronicle*.

"The book will prove an invaluable companion to persons visiting the Lake Country." —*Oxford Chronicle*.

London: J. Masters, Aldersgate-street and New Bond-street.

MR. NEWBY'S NEW PUBLICATIONS.

LIFE in the LAND of the FIRE- WORSHIPERS. Edited by FREDRIKA BREMER, Author of 'The Neighbours,' 'Home,' &c. 3 vols. 21s.

"What every novel should be, less a work of fiction than reality, enlisting our sympathies, whilst it amuses, enlightens and instructs us." —*Globe*.

The LAW of DIVORCE. By a Graduate of OXFORD. 1 vol. 10s. 6d.

"The arguments for and against the dissolubility of marriage are handled by the Oxford Graduate with remarkable cleverness. Contrary to our expectations a very thrilling and interesting story is interwoven with a subject which affects so deeply the welfare of society and the happiness of English homes." —*Globe*.

"While Belgavia mothers bewail the neglect of the holy rite of matrimony by young aristocrats, the same suggestive topic is treated from another and totally opposite point of view in a novel just published, with the piquant title of 'The Law of Divorce.'"
Liverpool Advertiser.

THE BELGRAVIAN LAMENT:

"Why don't the men propose?" An answer to this question will be found in 'The Intellectual Severance of Men and Women,' price 1s. 6d., and 'Young Ladyism,' by J. M'GRIGOR ALLAN.

RECOLLECTIONS of a FIVE YEARS' RESIDENCE in NORWAY. Price 5s.

"Decidedly the best guide-book to Norway." —*Advertiser*.

BEYOND the ORANGE RIVER; or, Scenes in Southern Africa. 1 vol. 10s. 6d.

"All those who have read Chailu's 'Equatorial Africa' will be equally pleased with the scenes in Southern Africa, depicted in 'Beyond the Orange River.'"
Globe.

"The reader who purchases this pleasantly-written volume may congratulate himself on his bargain." —*Wardner*.

STABLE MANAGEMENT; or, Precept and Practice. By HARRY BIEOVER. Being the Third of a New and Cheaper Edition of this Popular Writer's Works. Price 2s. 6d. each.

A HISTORY of CORK. By the Rev. C. B. GIBSON. 3 vols.

"Although the county and city of Cork form the centre of Mr. Gibson's picture, yet in truth the whole of Ireland is on the canvas. It may be profitably read by the general readers of history." —*Athenæum*.

THE SLIDING SCALE OF LIFE; Or, THIRTY YEARS' OBSERVATIONS OF FALLING MEN and WOMEN in EDINBURGH.

By JAMES M'LEVY, Edinburgh Police Detective Staff;
 Author of 'Curiosities of Crime in Edinburgh.'

"* This book contains some very curious and original revelations from the long and eventful experience of the
 Author, and will be found even more interesting than his former work, 'Curiosities of Crime,' which has attained a
 circulation of 20,000 copies within the space of three months, and has been most favourably noticed by almost the whole
 of the newspaper press in Great Britain."

London: HOULSTON & WRIGHT. Edinburgh: W. P. NIMMO; and all Booksellers.

DEDICATED BY PERMISSION TO THE RIGHT HON. BENJAMIN DISRAELI, M.P.

On Tuesday next will be published, in crown 8vo. cloth, price 5s. Second Edition, revised, with Preface,

THE SEASON: A SATIRE.

By ALFRED AUSTIN.

SECOND EDITION.

"All the follies and amusements of the town are passed
 in review by this stern but not unamusing censor."—*Critic*.
 "There are some verses of extraordinary force and
 vigour. This last line . . . is worthy of Byron."

"That Mr. Austin can appreciate and describe true
 womanly loveliness, is clearly shown by the few lines about
 a young girl fresh from the country in her first season."—*Globe*.

"Keen, glittering, pungent, and clever."—*Dispatch*.

"If cleverness, a considerable turn for epigram, and an
 unusual command of the Popsan style of Heroic verse,
 united with a good deal of truth, could reform the vices of
 London society, Mr. Austin might rank as an apostle."—*Press*.

"Mr. Alfred Austin's 'Season' is on several grounds
 one of the most notable of recent books. No more forcible
 satire has been written in England since the days of
 Byron."—*Weldon's Register*.

London: GEORGE MANWARING, 8, King William-street, Strand.

Just published, in crown 8vo. cloth, price 3s. 6d.

MY SATIRE AND ITS CENSORS.

By ALFRED AUSTIN,

Author of 'The Season: a Satire.'

"Mr. Austin's present work, though as vigorous in tone,
 is much less objectionable in expression than the former.
 . . . He comes before us not only as a satirist, but as a poet.
 . . . He has probably made sure of being read whenever he
 writes again; but he has powers which should induce him
 to aim at something higher than mere notoriety."—*Press*.

"The force and vigour of many of the lines are extremely
 great."—*Literary Gazette*.

"Another song of which poor H— D— is the victim, and
 whose illustrious career is thus pungently narrated. . . .
 Savage and smart."—*Sunday Times*.

"Mr. Alfred Austin has retorted upon his censors in
 a manner which certainly proves that if he has not the
 necessary 'delicacy of touch,' he certainly has 'the strength
 of arm' to administer a very severe flagellation."—*Observer*.

"Satire which, for pointed sarcasm and terse vigour,
 has probably not been surpassed since Byron's day."—*Illustrated Times*.

"Remarkable vigour, occasional gleams of true poetry,
 and sonorous flow of line. . . . As the poet (for our author is
 a poet) grows older, he will discover that no one with the
 slightest pretensions to independence of thought,—no one
 with a knowledge how ordinary criticism is 'done,'—no
 one, in fact, whose good opinion he need care to have,—is
 influenced by the preposterous verdicts of our professional
 Malevolence."—*Oriental Budget*.

"Mr. Austin is certainly an able man. Should his taste
 and judgment ever become equal to his ability, he will be
 likely to achieve noble things."—*Weldon's Register*.

London: GEORGE MANWARING, 8, King William-street, Strand.

HAYDN'S DICTIONARY OF DATES—TENTH EDITION.

This day is published, in 1 thick 8vo. vol. price 18s. bound in cloth,

A DICTIONARY OF DATES,

Relating to all Ages and Nations,

FOR UNIVERSAL REFERENCE;

Comprehending Remarkable Occurrences, Ancient and Modern;

The Foundation, Laws, and Government of Countries—their Progress in Civilization, Industry, Literature, Arts, and
 Science—their Achievements in Arms—and their Civil, Military, and Religious Institutions, and particularly of

THE BRITISH EMPIRE.

By JOSEPH HAYDN.

Tenth Edition, revised and greatly enlarged,

By BENJAMIN VINCENT,

Assistant-Secretary and Keeper of the Library of the Royal Institution of Great Britain.

In this the Tenth Edition the Chronological Tables have been revised and continued; about four hundred new
 articles have been inserted, and a large number of others re-written; the important dates have been compared with
 recognized authorities; and much biographical, geographical, literary, and scientific information has been supplied. To
 afford room for these additions, many articles have been condensed, and matters of less importance have been either
 printed in smaller type or excluded. The utility of the Index has been increased by the insertion of dates.

"A volume containing upwards of 15,000 articles, and, perhaps, more than fifteen times 15,000 facts. What the
 London Directory is to the merchant, this 'Dictionary of Dates' will be found to be to those who are searching after
 information, whether classical, political, domestic, or general."—*Times*.

London: EDWARD MOXON & Co. 44, Dover-street.

NEW VOLUME OF WHEWELL'S PLATO.

This day is published, fcap. 8vo. cloth, 7s. 6d.

THE PLATONIC DIALOGUES FOR
ENGLISH READERS.

Vol. III. containing THE REPUBLIC.

By W. WHEWELL, D.D. F.R.S.

Master of Trinity College, Cambridge.

Vol. I. Second Edition, containing THE SOCRATIC DIALOGUES, 7s. 6d.

Vol. II. containing THE ANTI-SOPHIST DIALOGUES, 6s. 6d.

MACMILLAN & Co. London and Cambridge.

MR. J. D. HARDING'S NEW WORK.

Just published, dedicated by special permission to Her Most Gracious Majesty the Queen, handsomely bound in cloth Four Guinea.

** One Thousand Copies only will be printed, when the Artist will himself destroy the Drawings on Stone.

PICTURESQUE SELECTIONS.

Drawn on Stone by J. D. HARDING, Author of 'Lessons on Art,' 'Elementary Art,' 'Principles and Practice of Art,' &c. Containing Thirty Drawings, on mounts, 22½ inches by 17½ inches.

Recent improvements in the appliances of Lithography have tempted Mr. Harding to produce the present work. His aim has been to give every Lithograph the freedom and the force, in short, the individuality, of an Original Drawing in Black and White Chalk, upon Tinted Paper,—to open up the contents of his Portfolio, and to make them universal property.

London: W. KENT & Co. Paternoster-row; WINSOR & NEWTON, Rathbone-place;

And all Booksellers, Printsellers, and Artists' Colourmen in the United Kingdom.

SMITH, ELDER & Co. 65, Cornhill.

EQUITABLE ASSURANCE OFFICE,

NEW BRIDGE-STREET, BLACKFRIARS.

ESTABLISHED 1762.

DIRECTORS.

THE RIGHT HON. LORD TREDEGAR, *President*.William Dacres Adams, Esq.
Philip Hardwick, Esq.
William Samuel Jones, Esq.
John Alldin Moore, Esq.
William Frederick Pollock, Esq.Charles Pott, Esq.
Rev. John Russell, D.D.
James Spicer, Esq.
John Charles Templer, Esq.
Right Hon. Lord Tredegar.John Charles Burgoyne, Esq.
Lord George Henry Cavendish, M.P.
Frederick Cowper, Esq.
Richard Gosling, Esq.
Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL Office. The reserve, at the last "rest," in December, 1859, exceeded three-fourths of a million sterling, a sum more than DOUBLES the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded **Three Millions and a Half**, being more than 100 per Cent. on the amount of all those Claims.The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was **£1,977,000**, and made, with former additions then outstanding, a total of **£4,070,000**, on Assurances originally taken out for **£6,252,000** only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.

£3,006,297—Cash lent on Mortgages of Freehold Estates.

£300,000—Cash advanced on Railway Debentures.

£83,590—Cash advanced on security of the Policies of Members of the Society.

Producing annually, **£221,482**.The total Income exceeds **£400,000** per Annum.

POLICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1862 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, without any deduction; and the Directors will advance nine-tenths of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war. A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

Introduction to the Study of Plants. With illustrative Wood-

cuts. Post 8vo. 3s. 6d.

John Van Voorst, 1, Paternoster-row.

J. H. DALLMEYER (Son-in-Law and Pupil

of the late ANDREW ROSS)

Respectfully begs to inform the Scientific Public that he ex-

clusively manufactures the ASTRONOMICAL TELESCOPE ac-

cording to A. K.'s processes, who has also bequeathed to him the

whole of this faculty.

For particulars of J. H. D.'s recent IMPROVEMENTS in

MICROSCOPIC OBJECT-GLASSES, PHOTOGRAPHIC

LENSES, &c. see Catalogue, which may be had on application at

19, BLOOMSBURY-STREET, Oxford-street, W.C.

OPERA, RACE and FIELD GLASSES,

in every variety of size and mounting, machines for power

and sharpness of definition, at CALLAGHAN'S, 23, New Bond-

street, W., corner of Conduit-street, sole Agent for the celebrated

Opera, Race and Field Glasses made by Voigtländer, Vienna, also

for their Photographic Lenses. Catalogue for two stamps.

T. ROSS, OPTICIAN

(SON AND SUCCESSOR OF THE LATE
ANDREW ROSS),

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

IMPROVED PHOTOGRAPHIC LENSES,
IMPROVED MICROSCOPE OBJECTIVES,

RACE, FIELD and OPERA GLASSES, &c., as usual.

See Catalogues, to be had on application at

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory; and whilst we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent Injections.

ICELAND SPAR.

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPES.

GORHAM'S KALEIDOSCOPIC COLOUR TOP, &c.

Catalogues, giving full particulars, may be had on application, or sent post free.

SMITH, BECK & BECK,
4, Coleman-street, London, E.C.
and Lister Works, Holloway.

ACCIDENTS OF ALL KINDS,
AND FROM ANY CAUSE,
may be provided against by an Annual Payment of 2s. to the RAILWAY PASSENGERS' ASSURANCE COMPANY, which secures 1,000l. at death by Accident, or 6s. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.
ONE PERSON in every TWELVE insured is injured yearly by ACCIDENT.

75,000l. has been already PAID as COMPENSATION.
For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 2, Old Broad-street).

ANNUAL INCOME, 40,000l.
CAPITAL, ONE MILLION.
WILLIAM J. VIAN, Secretary.
64, Cornhill, E.C., January, 1861.

GOVERNMENT SECURITY LIFE POLICIES.
THE CONSOLS ASSOCIATION,
439, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.
2. It lends, or returns to Insurers ON DEMAND at any time, about One-Half of all Premiums paid.
Undoubted Security for Money, with a liberal Rate of Interest.
The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
Full information may be obtained on application to
THOMAS H. BAYLIS, Managing Director.

Established in the Reign of Queen Anne, A.D. 1714.

UNION ASSURANCE SOCIETY,
FIRE AND LIFE.

Office:—
61, CORNHILL, and 70, BAKER-STREET, LONDON,
and in Bristol, Liverpool, Edinburgh, Dublin, Hamburg, Berlin and Bern.

FIRE INSURANCES DUE at MIDSUMMER should be paid on the 24th of June, or within fifteen days after.

This Company combines the advantages of a large accumulated capital, every modern system of Insurance, and the experience of 130 years.

Forms of Proposal, Fire and Life, sent free on application.

W. M. B. LEWIS, Secretary.

ENGLISH AND IRISH CHURCH and UNIVERSITY LIFE ASSURANCE SOCIETY.

HEAD OFFICE—54, STRAND, LONDON, W.C.
Incorporated by Act of Parliament.

Subscribed Capital, £100,000.

Clergymen, Ministers of all Denominations, and Members of the Universities assured at lower rates than the public generally.

For a small extra Premium payment of a Policy may be secured during life on the assured becoming totally disabled from following his ordinary avocation by Paralysis, Blindness, Insanity, or any accident.

At Annual Meeting of Shareholders on the 27th May, 1861, the Directors reported the receipt since the Meeting held last year of 799 proposals to assure 173,700l.; of these 538 had been completed, and the Society's Policies issued for the same, assuring 127,943l., and yielding annual income of 4,131,112l. 12s. 4d. Thirty-seven had been declined, and 174 were either under consideration, awaiting completion, or had not been carried out.

Prospectuses and every information may be had on application to
JOHN SHERIDAN, Manager.

LIFE ASSURANCE.—Special Notice.—The next investigation into the Profits of the Life Department of the SCOTTISH UNION LIFE ASSURANCE COMPANY will be made as at 1st August, 1861, and parties taking out Policies before that date will participate in the division.

635 new Policies, for 304,705l., yielding 9,892l. 6s. 2d. of new Premiums, were issued during the year ending 1st August, 1860.

Thirty days' grace allowed to renew Life Insurances, and 15 days to renew Fire Insurances, during which time, on payment of the premium, the Company hold themselves liable.

No extra Premium charged for Members of Volunteer or Rifle Corps within the United Kingdom.

LONDON BOARD.

President—The Right Hon. the EARL of MANSFIELD.

Directors:—
P. Anstruther, Esq. H. M. Kemhead, Esq.
Charles Balfour, Esq. John Kingston, Esq.

J. E. Goodhart, Esq. Hugh F. Sandeman, Esq.
George Ramsay, Esq., Manager.

Secretary—E. W. Duffin, M.D.

Solicitors—Messrs. Olverston, Lavin & Peachey.

A copy of the last Report, Forms of Proposals, and Prospectuses, may be had at the Office, 57, Cornhill, London; and of the Agents throughout the Kingdom.

FREDK. G. SMITH, Secretary to the London Board.
No. 57, Cornhill, London.

FREE ASSURANCE.

THE POLICIES OF THE
STANDARD LIFE ASSURANCE COMPANY
are relieved from all Restrictions as to Residence Abroad (except in special cases); and they are otherwise so framed as to afford the most complete security in connexion with Family Provisions, Marriage Settlements, Loan Transactions, and the various other purposes in connexion with which the protection of Life Assurance is sought.

THE STANDARD LIFE ASSURANCE COMPANY.

PANY was established in 1835; and, during the last fourteen years, the annual Average of New Assurances has exceeded Half-a-Million sterling, being the largest business transacted in that period by any Life Assurance Office. The New Assurances effected in 1860 alone were upwards of 700,000l. The business is a purely home business, the Company having no Agencies out of the United Kingdom.

Accumulated Fund.....£1,856,902 19 4
Annual Revenue.....£204,161 12 7

THE SIXTH DIVISION OF PROFITS
was made on 9th May last, when it was reported that the Bonus Additions were at the rate of 150 per cent. on the sum assured on Policies effected in 1835; 100 per cent. on Policies effected in 1841; and 50 per cent. on Policies effected in 1840. Next Division of Profits in 1866.

THE INVESTIGATION REPORT,
showing these important advantages, is now ready, and may be had at the Office, or Agencies of the Company.

WILLIAM THOMSON, Manager.
H. JONES WILLIAMS, Resident Secretary.
London.....52, King William-street.
Edinburgh.....3, George-street (Head Office).
Dublin.....36, Upper Sackville-street.
Glasgow.....36, St. Vincent-place.

GENERAL LIFE AND FIRE ASSURANCE COMPANY.

62, KING WILLIAM-STREET, LONDON, E.C.

Established 1837.

CAPITAL, 1,000,000l.

Directors.

THOMAS CHALLIS, Esq. Ald., Chairman.
THOMAS BRIDGE SIMPSON, Esq., Deputy-Chairman.
Jacob George Cope, Esq.
William Delf, Esq.
John Dixon, Esq.
Benjamin Edgington, Esq.
John T. Fletcher, Esq.
George S. Freeman, Esq.
Charles James Heath, Esq.
James Pilkington, Esq. M.P.
Right Hon. C. P. Villiers, M.P.
Edward Wilson, Esq.

FIRE and LIFE INSURANCES effected on the most advantageous terms. Apply to THOMAS PRICE, L.L.D., Secretary, or to the Local Agents of the Company.

The Fire Premiums of 1860 were upwards of 45 per cent. more than those of 1859, whilst the losses were 18 per cent. less.

The New Life Business has more than trebled within the last four years.

The Life Reserve Fund is more than six times the annual Life Income.

The Assets are upwards of 250,000l.

NORTH BRITISH INSURANCE COMPANY, 1860.

Incorporated by Royal Charter and Act of Parliament.

Policies opened during the current year will be entitled at next distribution of Profits, in December, 1865, to rank for Five Years' Bonus, which at last investigation ranged from 25s. to 32s. per cent. per annum on the sums assured, and it is expected that the great improvement in the business of the Company of late years will beneficially affect the forthcoming one, 741 New Policies for 475,648l. having been opened last year.

HEAD OFFICE—64, PRINCES-STREET, EDINBURGH.

LONDON BOARD—Office: 4, New Bank Buildings, Lothbury.

SIR PETER LAURIE, Chairman.

JOHN I. GLENNIE, Esq., Deputy-Chairman.

William Borradaile, Esq. P. Northall Laurie, Esq.
John Connell, Esq. Charles J. Knowles, Esq.
Archibald Cockburn, Esq. Peter J. T. Pearce, Esq.

The attention of those about to assure is specially directed to some New Tables of Premiums recently constructed for this Company, which with Forms of Proposals, &c., may be had as above, or will be forwarded free on application.

ROBERT STRAUGHAN, Secretary.

ESTABLISHED 1837.

SAUCE.—LEA AND PERRINS beg to caution the Public against Spurious Imitations of their world-renowned
WORCESTERSHIRE SAUCE.

Purchasers should
ASK FOR LEA AND PERRINS' SAUCE,
Pronounced by Connoisseurs to be
"THE ONLY GOOD SAUCE."

* * * Sold Wholesale and for Export, by the Proprietors, Worcester, Messrs. CHAS. & BLACKWELL, London, &c.; and by Grocers and Oilmen universally.

HOLLOWAY'S PILLS AND OINTMENT
 suitable for all.—These purifying preparations should be
 in every house; they are composed altogether of vegetable ex-
 tracts, and being entirely free from mercury or any other mine-
 ral, they may be used with the utmost safety and certainty of suc-
 cess by all members of the family circle. Their action is always
 alternative and slightly aperient. They regulate digestion, adjust
 the secretion of the liver, promote the activity of the kidneys,
 and over every organ exert the most wholesome control, rousing
 the sluggish, and repressing excessive action. Their beneficial
 influence is not confined to any particular region, but ranges over
 the whole system, and is equally efficacious in everything that is
 morbid, and impairs the health for disease.

VALUABLE BOOKS published or sold by HENRY G. BOHN.

TURNER'S LIBER FLUVIORUM; or, River Scenery of FRANCE. Sixty-three highly-finished Line Engravings on Steel, by Willmore, Goodall, Miller, Cousens, and other distinguished Artists. With Descriptive Letter-press by LEITCH RITCHIE; and a Memoir of J. M. W. TURNER, R.A., by ALARIC A. WATTS. Imperial 8vo. cloth extra, gilt edges, 11. 11s. 6d.

MARY HOWITT'S BRITISH QUEENS. Imperial 8vo. with Twenty-eight splendid Portraits by the first Artists, engraved on Steel, richly bound in crimson cloth, gilt edges, 11. 11s. 6d.

BOOK OF BRITISH BALLADS. Edited by S. C. Hall, Esq. Every page richly embellished with above Five hundred very highly-finished Wood Engravings, after Grosvenor, Gilbert, Franklin, Corbould, &c. 3 vols. in 1, Imperial 8vo. New Edition, much improved, cloth, gilt edges, 11. 5s.

BOOK OF FAVOURITE MODERN BALLADS; containing Ballads by Sir W. Scott, Campbell, Rogers, Southey, Coleridge, Wordsworth, Macaulay, Longfellow, Hood, Lover, Tennyson, Mackay, Barry Cornwall, Præd, and others. Illustrated with Fifty beautiful Engravings on Wood, printed in tints from Drawings by Birket Foster, Harrison Weir, Harvey, and others. Borders and Floral Decorations printed in gold. Small 4to. extra cloth, richly gilt, 12s.

WILSON'S FRENCH-ENGLISH and ENGLISH-FRENCH DICTIONARY; containing full Explanations, Definitions, Synonyms, Idioms, Proverbs, Terms of Art and Science, and Rules of Pronunciation in each Language. Compiled from the Dictionaries of the Academy, Beyer, Chambaud, Garnier, Laveaux, Des Carrières and Fain, Johnson and Walker. 1 large vol. Imperial 8vo. cloth, 16s.

JOHNSON'S ENGLISH DICTIONARY, printed verbatim from the Author's last Folio Edition, with all the Examples in full; to which are prefixed, a History of the Language, and an English Grammar. 1 large vol. Imperial 8vo. cloth, 18s.

WEBSTER'S and WORCESTER'S NEW CRITICAL and PRONOUNCING DICTIONARY of the ENGLISH LANGUAGE, including SCIENTIFIC TERMS: to which are added, Walker's Key to the Pronunciation of Classical and Scriptural Proper Names, much enlarged; and a Pronouncing Vocabulary of Modern Geographical Names. New Edition, enlarged and entirely revised. In 1 thick vol. royal 8vo. cloth, 12s.

This is the most complete English Dictionary ever published within the same compass, and includes all the Technical and Scientific Terms yet introduced into our language. It comprises 27,000 Words more than Todd's edition of Johnson, and the Pronunciation of every Word on the plan of Walker, but more complete and correct, inasmuch as many changes upon the best authorities have taken place since his time; also Walker's Key to Classical and Scriptural Pronunciation, greatly enlarged and improved, and a Pronouncing Vocabulary of Modern Geographical Names. Of late a similar Edition of Webster's Dictionary, edited by Goodrich, has been placed before the English public. It extensively adopts the American mode of Spelling, which to those who are not firm in their orthography perplexing. The edition of Webster's Dictionary which established his name in this country was compiled and edited for him by WORCESTER, the compiler and editor of the present; and Worcester is still regarded in America as the best lexicographical authority.

LOUDON'S HORTICULTURIST; or, the Culture and MANAGEMENT of the KITCHEN, FRUIT and FORCING GARDEN, for those who have no previous knowledge or practice. With nearly Four Hundred Engravings on Wood. Second improved Edition, now first published at a reduced price, thick 8vo. cloth, 12s. 1860

BUNYAN'S PILGRIM'S PROGRESS. Illustrated by STOTHARD, with Seventeen exquisitely beautiful Engravings on Steel, cloth gilt, 12s.

The YOUNG LADY'S BOOK: a Manual of Elegant RECREATIONS, ARTS, SCIENCES and ACCOMPLISHMENTS. Edited by distinguished Professors. With Twelve Hundred Woodcut Illustrations, and several fine Engravings on Steel, 7s. 6d.

Includes Geology, Mineralogy, Conchology, Botany, Entomology, Ornithology, Costume, Embroidery, the Escripote, Archery, Riding, Music (instrumental and vocal), Dancing, Exercises, Painting, Photography, &c. &c.

KNIGHT'S PICTORIAL LONDON. 6 vols. bound in 3 thick handsome vols. imp. 8vo. illustrated by Six Hundred and Fifty Wood Engravings, extra cloth, gilt backs, very elegant, (pub. at 21. 5s.), 11. 18s.

LOW'S DOMESTIC ANIMALS of GREAT BRITAIN, exemplified in Fifty-six large and very beautifully coloured Plates of the various Breeds of the Horse, Ox, Sheep, and Pig. Imperial 4to. half bound morocco, gilt edges, (published at 161. 16s.), 81. 8s.

SCOTT'S COMMENTARY on the HOLY BIBLE. Author's Edition, with his last Corrections and Improvements, and Eighty-four beautiful Woodcut Illustrations, and Maps. 3 vols. imp. 8vo. cloth, (pub. at 41. 4s.), 11. 16s.

SHAKSPEARE, the LANSDOWNE EDITION, complete in One Volume, with Glossary, beautifully printed in red and black, in very clear type, crown 8vo. with fac-simile of the original Portrait, cloth extra, gilt edges, richly gilt back and sides, 15s.

The SAME, illustrated with Thirty-seven extremely beautiful Steel Engravings, chiefly after Stothard, cloth extra, gilt edges, richly gilt back and sides, 11. 1s.

SHAKSPERE'S PLAYS and POEMS (Knight's Edition), with Explanatory Notes and a Sketch of his Life and Writings. Illustrated with 40 large Designs on Wood by W. Harvey. Sixth Edition, thick 8vo. cloth, 10s. 6d.

MARRYAT'S POOR JACK. Illustrated by Stanfield. Forty-six Wood Engravings by the best Artists. 8vo. cloth, gilt edges, 6s.

MARRYAT'S MASTERMAN READY; or, the Wreck of the PACIFIC, (written for Young People). New Edition, fcap. 8vo. with Ninety-three Engravings on Wood, cloth, 5s.

MARRYAT'S SETTLERS in CANADA (written for Young People). New Edition. Fcap. 8vo. with Ten Illustrations on Wood by Gilbert and Dalziel. Cloth, 5s.

MARRYAT'S SCENES in AFRICA, or MISSION, (written for Young People). New Edition. Fcap. 8vo. with Eight Illustrations on Wood by Gilbert and Dalziel. Cloth, 5s.

MARRYAT'S PRIVATEER'S-MAN. In 1 vol. fcap. 8vo. with beautiful Engravings on Steel, in the manner of Stothard. Cloth, 5s.

MARRYAT'S PIRATE and THREE CUTTERS. Twenty fine Engravings on Steel, after Stanfield. New and improved Edition, with a Memoir of the Author, 8vo. cloth, 5s. [To be ready in a few days.]

CHARLES LAMB'S WORKS, Complete, containing his Letters, Essays of Elia, Poems, Plays, &c.: with Life of the Author, including the additional Memorials by Sir T. N. TALFOURD. In 1 stout volume, royal 8vo. handsomely printed, with Portrait and Vignette Title, cloth, 12s.

COLLETTA'S HISTORY of the KINGDOM of NAPLES. Translated from the Italian by SARAH HORNER. With a Supplementary Chapter containing the Work to 1866, and a copious Index. 3 vols. 8vo. handsomely printed, cloth, reduced to 10s.

"General Colletta was intimate with the leading Neapolitans of his time; he knew the minor Bonapartes; he served the Royal and Republican Courts; he was a contemporary of Nelson and Emma Hamilton; he was sufficiently close to the scene to share in the popular emotion when Caracciolo died on the yard-arm of the Minerva."—*Advertiser*.

STANDARD LIBRARY ATLAS of CLASSICAL GEOGRAPHY. Twenty-two large coloured Maps, according to the latest Authorities, with a complete Index (accentuated), giving the latitude and longitude of every place named in the Maps. Imperial 8vo., chiefly engraved by the Messrs. Walker. Cloth lettered, 7s. 6d.

"Inquiries having frequently been made for Maps illustrative of the historical and geographical authors published in Bohn's Classical Library, the present Atlas is intended to supply that want, and will be found, it is believed, unexceptionable both as to literary and artistic execution. In the Index, which is very complete, the classical quantities are generally marked, whence we have ventured to call it accentuated."

HEEREN'S MANUAL of the HISTORY of EUROPE and its COLONIES, from the Close of the Fifteenth Century to the Fall of Napoleon. (Hitherto published at 11. 4s.) New Edition, with Index. Cloth, 7s. 6d.

HEEREN'S MANUAL of ANCIENT HISTORY, particularly with regard to the Constitutions, the Commerce, and the Colonies of the States of Antiquity. Third Edition. 8vo. cloth, 6s.

"Professor Heeren's Historical researches stand in the very highest rank among those with which modern Germany has enriched the literature of Europe."—*Quarterly Review*.

WASHINGTON IRVING'S WORKS. With Portraits and Frontispieces. 14 vols. post 8vo. cloth, uniform with the STANDARD LIBRARY, 21. 2s.

CONTENTS

1. SALMAGUNDI, and KNICKERBOCKER.
2. SKETCH-BOOK, and LIFE of GOLDSMITH.
3. BRACEBRIDGE HALL, and ABBOTSFORD and NEWSTEAD.
4. TALES of a TRAVELLER, and the ALHAMBRA.
5. CONQUEST of GRANADA, and CONQUEST of SPAIN.
- 6 and 7. LIFE of COLUMBUS, and COMPANIONS of COLUMBUS.
8. ASTORIA, and TOUR in the PRAIRIES.
9. MAHOMET and his SUCCESSORS.
10. CONQUEST of FLORIDA, and ADVENTURES of CAPTAIN BONNEVILLE.
- 11—14. LIFE of WASHINGTON.

College, Edinburgh, July 1, 1861.

QUEENWOOD COLLEGE, Four Miles from Dunbridge Station, South-Western Railway, Hampshire.

The Course of Instruction embraces the Mathematics, Natural Philosophy, Theoretical and Practical Chemistry, English, Classics, Foreign Languages, Practical Surveying, Levelling, &c., Mechanical and Free-hand Drawing and Music. The Principal is assisted by Ten resident Masters. The position of the Establishment is beautiful, and the advantages various and unusual. Attention is invited to the Prospectus, which may be had on application. The next half-year will commence on the 1st of August.

Queenwood College, Stockbridge, May 21, 1861.

MILL-HILL SCHOOL, Near Hendon, N.W., will RE-OPEN WEDNESDAY, July 31, 1861.

Applications for Admission or Prospectuses to the Rev. Dr. HURNALL, Head-Master, or the Rev. THOMAS REES, at the School.

CIVIL SERVICE, WOOLWICH, &c.—GENTLEMEN are efficiently PREPARED for the CIVIL and MILITARY EXAMINATIONS, or for the UNIVERSITIES, by an M.A. of long experience as a Private Tutor in Cambridge, assisted by competent Masters in the various branches required. For Particulars, apply to the Rev. the PRINCIPAL, 8, York-terrace, Tunbridge Wells; or to Messrs. RELIFE BROTHERS, School Bookellers, 150, Aldersgate-street, London.

LITERARY PROPERTY.—A Nobleman or Gentleman of fair repute may hear of a chance of PURCHASING a highly-remunerative INTEREST in a Literary Property of first-class character.—Address, in strictest confidence, with real name, to ERSKINE, Post-office, Chancery-lane.

BERWICK GRAMMAR SCHOOL.—HEAD-MASTER WANTED.

THE TRUSTEES of this SCHOOL will, during the ensuing month of August, proceed to the ELECTION of a HEAD-MASTER.

The System of Education comprises Instruction in English Grammar and Composition, Writing, Arithmetic, Book-keeping, Mathematics, Geography, and History, and in the Greek, Latin, French, and German Languages.

The Head-Master will be entitled to occupy and use, free from taxes, the Premises belonging to the Establishment, consisting of a commodious dwelling-house and a school-house, in which upwards of Eighty Boys may be taught.

The Annual Revenue of the School, arising from its endowment, amounts to about 180*l.*, two-thirds of which the Trustees are permitted to assign to the Head-Master. Of the Fees, which (except with some modifications as to the sons of Free-men) are at present fixed at Two Guinees per Quarter, one-half will be assigned to the Head-Master, the remainder being applicable to the payment of an Assistant and to the formation of a Reserve Fund. The other Emoluments of the Head-Master arise from Boarders.

It is desirable that the new Master shall commence his duties at the Re-opening of the School in August.

Candidates will be pleased to send copies of their Testimonials, on or before the 27th July inst., to the Clerk to the Trustees, at the Corporation's Treasurer's Office, Berwick-upon-Tweed.

By order of the Trustees,

THOS. CAIRNS, Secretary.

Berwick-upon-Tweed, July 2, 1861.

THE SCIENTIFIC and ENGINEERING SCHOOL, at the COLLEGE, CHESTER.

THIS SCHOOL is recognized by the SECRETARY of STATE for INDIA, "as possessing an efficient Class for Civil Engineering."

Each Pupil is provided with a separate Sleeping Apartment. Application for Admission is to be made to the Rev. ARTHUR RHOOD, College, Chester.

PESTALOZZIAN SCHOOL, WORKSOP, NOTTS.—In this Establishment the Arrangements are of a superior order, and young Gentlemen are carefully educated for the Universities, Competitive Examinations, and for Mercantile Engineering and Agricultural Pursuits. Under the care of competent English and Foreign Masters, the Pupil enjoy the advantages of first-rate English and Continental Schools. The course of instruction is very comprehensive. The School is in a most favourable Situation; and for exercise and recreation there are extensive playgrounds and a covered gymnasium. Worksop is famed for its cleanliness and salubrity, and the splendid Parks surrounding have a wide celebrity. The School re-opens on the 9th of August.—For Prospectuses, and further Particulars, apply to J. L. ELLENBERGER.

HARROW or RUGBY.—A Married M.A., of Trinity College, Cambridge, Senior Optime and First Classman in the Classical Tripos, Head-Exhibitor of his year at Rugby, who prepares Boys for the Public Schools, except Eton, has VACANCIES for AUGUST. His house, recently enlarged for the purpose, is situated in a beautiful and healthy part of the country. Terms, 80 Guineas a year, with no extras.—Address M. L., 71, High-street, Birmingham.

ESTABLISHMENT of a COLLEGE HALL (ST. LEONARD'S) at ST. ANDREWS, for the RECEPTION and TUITION of STUDENTS ATTENDING the UNIVERSITY.

To be OPENED 1st NOVEMBER 1861.

Council.

* Principal Forbes.
* Rev. Dr. Cook.
* John Hunter, Esq., Auditor of the Court of Session.
* George Dempster, Esq. of Skibo.
* W. T. Milton, Esq., Provost of St. Andrews.

Those marked thus * form a resident Acting Committee, to co-operate with the Warden.

Warden.

Henry T. Rhodes, Esq. B.A., University College, Oxford.

In order to supply the want often felt by Parents and Guardians who wish to send their Sons or Wards to one of the Scottish Universities, it has been resolved to establish at ST. ANDREWS, for the reception of Students, at the beginning of next Session, a HALL, which shall combine domestic comfort and superintendence with moral and religious influence, and the best possible aids to study. By this means it is proposed to provide more fully than heretofore the necessary superintendence and training for Young Men who may wish either to complete their Course in St. Andrews University, or to fit themselves for the Indian or Civil Service Examinations, or to proceed to Oxford or Cambridge.

The commodious House of ST. LEONARD'S (on the site of the ancient College of that name), long the residence of the late Sir Hugh Lyon Playfair, has been taken on lease, and is about to be comfortably furnished for this purpose.

Mr. HENRY T. RHODES, B.A. University College, Oxford, has been engaged as Warden. The internal arrangements and Tuition will be under his superintendence, with such assistance as may be required, and with the co-operation of an Acting Committee of the Subscribers, consisting of Principal Forbes, Rev. Dr. Cook, and Professor SHAIR, any of whom will be glad to furnish such further information as may be desired.

The charge for Board is fixed at Sixty Guineas for the Session of Six Months, which sum will cover all expenses connected with the House and in the House.

Every Student must be in attendance on one or more Classes of the University, the Fees for which do not exceed 3*l.* 3*s.* for any one Class.

It is proposed to keep the Hall open during May, June, and July, sufficient number of Students present themselves.

A fuller Prospectus may be had on application to the Treasurer, W. F. IRELAND, Esq., St. Andrews.

As the accommodation is limited, and as arrangements must be made with reference to the probable number of entrants, early application is particularly requested by the Acting Committee.

By Order,

W. F. IRELAND, Treasurer.

St. Andrews, July 12, 1861.

WANTED by an ENGLISH GENTLEMAN, Age 50, PARTIAL ENGAGEMENT as English, Italian, or French Correspondent, Confidential Secretary, Reader, Translator, Teacher or otherwise. First-rate City and West-End references offered.—Address (p.p.) Mr. C. 33, Great Portland-street, Regent-street.

EDUCATION in GERMANY, BONN.—Mr. TH. STROMBERG, Graduate of Philology, authorised and only Translator of the last volume of Lord Macaulay's 'History of England,' and Author of Metrical Versions from the Classics, RECEIVES a FEW YOUNG GENTLEMEN. Latin, Greek, German, &c. French by a Native Professor. Highest references. Mr. S. will be in London from the 16th to the last of July, at CULVERWELL'S HOTEL, 21, Norfolk-street, Strand, from Eleven till One.

EDUCATION in GERMANY.—CANN-STATT, near Stuttgart, one of the finest and healthiest places in Germany (30 hours from London).—Prof. HIRSCH, whose Establishment is highly recommended by the Rev. James Hamilton, D.D. of Regent-square, and the Rev. Newman Macleod, D.D. of Glasgow as well as by all the Gentlemen whose sons have been under Prof. Hirsch's care, has some VACANCIES at present. The Instruction comprises chiefly the Modern Languages, Arithmetic, Latin, Mathematics in all its branches, Geography, and History. Sons of Gentlemen only are received. The Quarter begins with the Entrance of the Pupil.—For further information and Prospectuses apply to Prof. Hirsch, Cannstatt-on-the-Neckar; or to Mr. COZZI, 120, Cheapside, E.C., London.

EDUCATION.—A Lady, who has been for upwards of twenty years engaged in Tuition, and who resides in a Cathedral and Collegiate City (presenting peculiar facilities for instruction by the ablest Professors), RECEIVES a limited number of YOUNG LADIES.

The Course of Instruction comprises, in addition to the usual branches of General Education, French, German, Italian, Latin, Music, Singing, Drawing, Painting, Dancing and Calligraphic Exercises.

The Domestic arrangements combine the ease and comfort of a Home with the necessary discipline of a School.

The References include many Clergymen and Laymen of the Church of England, in various parts of the Kingdom.

Communications, addressed to A. B. C., No. 4, Canonbury-lane, Canonbury-square, London, N., will receive prompt attention.

CLAPHAM-PARK SCHOOL.—Mr. LONG'S Pupils have gained Honours, and occupied foremost positions in various Public Examinations, and on two recent occasions have received the only Classical Prizes given among a large number of Schools examined. Particulars of the above, with numerous references, will be given on application.—Terms, inclusive, from 20 guineas, according to age.

DENMARK HILL GRAMMAR SCHOOL, near London.

Principal—Mr. C. P. MASON, B.A., Fellow of University College, London.

THE PUPILS of the above-named School will RE-ASSEMBLE on TUESDAY, July 30. Prospectuses may be obtained on application at the School; or of Messrs. Lindsay & Mason, 84, Basing-hall-street; or Messrs. Relife Brothers, School Bookellers, 150, Aldersgate-street.

SEAWOOD HOUSE, GRANGE, in CARTMEL, LANCASHIRE. Mrs. William Dracup, Principal, assisted by Miss E. Askew and Foreign Teachers.—Scholarship duties in the above Establishment, for the Education of Young Ladies, will BEGIN AGAIN ON TUESDAY, the 30th of July.—Prospectuses, &c. may be had on application.

MISS HOLTHAM, formerly of Bowdon, Cheshire, who receives a few Young Ladies requiring social yet select companionship in their studies, will have a VACANCY for ONE PUPIL after the present Vacation, ending the 9th of August.—For Terms and References address Miss HOLTHAM, 21, Powis-square, Brighton.

MILITARY EXAMINATIONS.—COMPETITORS for Sandhurst, Woolwich, or the Staff College, and Candidates for Direct Commissions or Staff Appointments, are PREPARED in all the Branches (compulsory and optional) of their Progress, at the Practical Military College, Sunbury, S.W.—Apply for Prospectuses, &c. to Captain LEEDY.

THE GOVERNESSES' INSTITUTION, 34, SOHO-SQUARE.—MRS. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Noblesse, Gentry, and Principals of Schools, to her REGISTER of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

THE NEW EDITION of Mr. HERMAN MERIVALE'S 'LECTURES ON COLONIZATION,' with Notes and Additions, in 1 vol. 8vo. price 18*s.*, may now be had. Published by Messrs. LONGMAN and Co. Paternoster-row.

INTERNATIONAL EXHIBITION, 1862.—THE TRADES of the UNITED KINGDOM, classified in the Order in which Exhibitors' Productions will be exhibited. To be had of all Booksellers, and at 454, West Strand, W.C. Price, 1*s.*

INTERNATIONAL EXHIBITION, 1862.—Preparing for Publication, SOME ACCOUNT of the BUILDINGS designed by Capt. FOWKE, R.E. for the INTERNATIONAL EXHIBITION, 1862, with Illustrations.—London: CHURMAN & HALL; and of all Booksellers, and at Railway Stations.

NOTICE.—TO TOURISTS in IRELAND.—SIR CESAR RONEY'S MONTH in IRELAND: HOW TO SPEND IT, AND WHAT IT WILL COST, is now ready, price 1*s.*—W. H. SMITH & Son, and all Railway Stations; M'Glashan & Gill, Dublin.

NOTICE.—TO TOURISTS.—BLACK'S GUIDE-BOOKS and TRAVELLING MAPS, last Editions, will be found to contain all the most recent and useful information for travelling in this country.—London: SMITH & Son, 123, Strand; and sold by all Booksellers.

NOTICE.—CRYSTAL PALACE, DULWICH, K.E.W. RICHMOND, &c.—Just published, price 5*s.*, with Map and Illustrations, BLACK'S GUIDE to SURREY, containing Descriptions of the above and every other place of interest.—SMITH & Son, Strand; and all Booksellers.

NAUTICAL EDUCATION.—SCHOOL FRIGATE, "CONWAY," LIVERPOOL.
Capt. ALFRED ROYER, R.N., Commander.
THOMAS DOBSON, Esq., B.A., Head-Master.
The next Session of this Institution, established to afford, at moderate expense, a sound Education and practical Nautical Instruction, to Boys intended for Officers in the Merchant Navy, will COMMENCE on the 1st of August.
His Grace the Duke of Somerset and Rear-Admiral Lord Charles Paget each give a Naval Cadetship next Christmas, to be competed for by the Boys.
Many of the leading Shippers of Liverpool have agreed to take the Cadets from the "Conway" as Apprentices free of premium.
Terms, 25 Guineas per annum. Applications to be addressed to the Commander of the "Conway," Rook Ferry, Birkenhead; or to B. J. THOMSON, Secretary, 4, Chapel-street, Liverpool.

FRENCH, Italian, German.—9, OLD BOND-STREET.—Dr. ALTSCHUL, Author of "First German Reading-Book," (dedicated to Her Grace the Duchess of Sutherland), &c. M. Philol. Soc., Prof. Elocution.—TWO LANGUAGES TAUGHT in the same lesson, or alternately, on the same Terms as One, at the pupil's or at his house. Each language spoken in his PRIVATE LESSONS, and select CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.

PROFESSOR GARDNER, F.E.S., &c., begs to state that his LECTURES on the EXPERIMENTAL SCIENCES, fitted for gentlemen preparing for the Government and other Examinations, are now conducted at the Polytechnic Institution. The Apparatus of this Establishment, conjoined to his own, gives facilities seldom afforded. Engagements for the same Courses of Lectures are made with Private Establishments, Institutions, &c. The Laboratory, under the direction of Professor Gardner, is open for Pupils. Private Study, Analyses, &c.—309, Regent-street, W.

THE PROPRIETOR of a SMALL BOARDING SCHOOL for BOYS, in the North of England, wishes to meet with a Gentleman to succeed him at Christmas, 1861.—For particulars address A. W., care of Messrs. Williams & Norgate, 14, Henrietta-street, Covent-garden, London.

TO NEWSPAPER PROPRIETORS.—A YOUNG MAN, who is an accurate and expeditious Shorthand Writer, and has been engaged on a Provincial Paper, for four years, as ASSISTANT REPORTER, &c., desires a RE-ENGAGEMENT. First-class Testimonials.—Address PRIMO, 9, St. Martin's, Leicester.

LITERARY.—An Income of 500*l.* per Annum can be secured by any person willing to invest that sum in a literary undertaking. Particulars on an interview only.—F. G., Post-office, 107, Fleet-street, E.C.

LITERARY.—A Graduate of an English University will be glad to UNDERTAKE FRENCH or GERMAN TRANSLATION, Medical or other, for an Author or Publisher. Satisfactory references.—Address SIGMA, Mr. Lewis's, 15, Gower-street North, W.C.

EDITOR, SUB-EDITOR, &c.—SITUATION WANTED, by a competent Man, on a Liberal Journal. Good references and testimonials.—Address SIGMA, Mr. Lewis's, 15, Gower-street North, W.C.

IMPORTANT NEWSPAPER PROPERTY and PRINTING BUSINESS for DISPOSAL.—C. MITCHELL & CO. are instructed to DISPOSE of a thriving PROPERTY, in a large Commercial Town. The Concern is old established, with a most extensive advertising connexion. Price required, about 2,000*l.* To an eligible person favourable terms would be accepted.—For particulars, &c., apply to C. MITCHELL & Co., Agents of the Sale, at the Purchase of Newspaper Property, 15 and 13, Red Lion-court, Fleet-street, E.C.

REPORTER WANTED on an established Provincial Journal of Liberal Politics. He must be a Verbatim Shorthand Writer, and prepared to give proofs of practical experience on the Press.—Address S. R., care of Mr. Black, 9, Catherine-court, Tower-hill, London.

TO EDITORS, &c.—An AUTHOR, of high Academic character, of an extensive reading, and long Literary experience, would UNDERTAKE the REVIEW DEPARTMENT of a Newspaper or other Periodical. Notices, as full and elaborate as may be desired, would be supplied with strict punctuality and on easy terms.—Address L.L.D., care of Mr. Booth, 307, Regent-street.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The objects of the Association are:—"To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

Reception Room, The Portico, Manchester, July, 1861.

The Local Committee of the British Association for the Advancement of Science announce that the MEETING for this year will be held in Manchester, and will commence on Wednesday the 4th of September next, under the presidency of William Fairbairn, Esq. L.L.D. F.R.S. &c.

On this occasion it is fully expected that there will be present many of the corresponding members of the Association, and a large number of British members, to all of whom the special inducements offered by the city of Manchester and its populous and industrious neighbourhood are well known. The time appointed for the Meeting has been arranged for the convenience of members of foreign as well as British universities, and as the facilities for arrivals are now very complete, there is every reason to anticipate a meeting of unusual extent and interest. Both the general and local officers will exert themselves to make the visit of their associates on this occasion agreeable and satisfactory.

The Local Committee are preparing, amongst other arrangements for the entertainment of the Association, besides special lectures on some interesting branches of science and open soirées to be held in the Free Trade Hall, the following special exhibitions, viz.:

An exhibition illustrative of the history, progress and achievements of photographic art in its several branches, and photographic apparatus.

And a similar exhibition of telegraphic science and apparatus.

A very extensive exhibition of modern microscopes and microscopic apparatus.

And exhibitions of specially interesting zoological, botanical and geological specimens, chemical products, philosophical apparatus and mechanical models.

Excursions to neighbouring localities of scientific or general interest will be provided for, and

Arrangements will be made for extensive access to establishments in the neighbourhood, where visitors may have the opportunity of seeing various branches of local industry and practical science in operation.

The Local Secretaries will be glad to be informed as early as may be convenient, of the intention of any visitor to be present at the meeting, and on receiving the necessary (and timely) communication, will be happy to render such assistance as they can in arranging for visitors any lodging accommodation they may require. The scientific business of the Meeting will be allotted in the under-mentioned Sections. The following gentlemen have undertaken to act as Secretaries of Local Sectional Committees until the commencement of the Meeting, and will be glad to receive communications relating to the business of their several departments:

SECTION A.—MATHEMATICS AND PHYSICAL SCIENCE.

Professor R. B. Clifton, B.A., Owens College, Manchester.

Thomas Hoellis, Esq., Princess-street, Manchester.

SECTION B.—CHEMICAL SCIENCE.

Professor H. E. Roscoe, B.A. Ph.D., Owens College, Manchester.

Robert Rumney, Esq., Ardwick, Manchester.

SECTION C.—GEOLOGY.

John Atkinson, Esq. F.G.S., Thelwall, near Warrington.

Rev. George Perkins, M.A., Dickenson Road, Rusholme, Manchester.

SECTION D.—ZOOLOGY AND BOTANY.

Thomas Alcock, Esq. M.D., Upper Brook-street, Manchester.

George Mosley, Esq. St. Peter's-square, Manchester.

SECTION E.—PHYSIOLOGY.

William Roberts, Esq. M.D., 186, Oxford-road, Manchester.

Thomas Windsor, Esq. M.E.C.S., Piccadilly, Manchester.

SECTION F.—GEOGRAPHY AND ETHNOLOGY.

Principal J. G. Greenwood, B.A., Owens College, Manchester.

SECTION G.—ECONOMIC SCIENCE AND STATISTICS.

Professor R. C. Christie, M.A., Owens College, Manchester.

SECTION H.—MECHANICAL SCIENCE.

John Robinson, Esq., The Atlas Works, Great Bridgewater-street, Manchester.

Communications intended for presentation to the Sections are expected to be forwarded in letters, addressed either to the Assistant General Secretary, at "The Portico," Manchester, or to one of the Secretaries of the Local Sectional Committees, pre-tem.; and to be accompanied by a statement whether the author will be present, and on what day, so that the business of the Sections may be satisfactorily arranged.

As the objects of the Association are specifically scientific, papers on subjects not so characterized, as on questions of history, biography, literature or art, however interesting, are necessarily inadmissible.

Gentlemen desirous of attending the meeting may make their choice of being proposed as life members, paying 10*l.* as a composition, or annual subscribers, paying an admission fee of 1*l.*, and (additional) 1*l.* annually, or associates for the meeting, paying 1*l.*

Ladies may become members on the same terms as gentlemen; and ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1*l.*

Life members receive gratuitously the reports of the Association which may be published after the date of payment.

Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subscription, without intermission. Associates for the meeting are entitled to the Report of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that applications for tickets should be made as early as possible.

Forms of proposal will be supplied in the Reception Room during the meeting, and of candidates for admission may be transmitted to the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and arrears of former members, by the Local Treasurer.

New life members will receive the volume of Transactions for this and future years gratis, as will also annual subscribers during the continuance of their subscription.

For information respecting the local arrangements, application may be made by letter addressed to any of the Local Secretaries for the meeting, at The Portico, Manchester.

R. D. DARBISHIRE, 21, Brown-street,

Manchester.

ALFRED NEILD, Mayfield, Manchester.

ARTHUR RANSOME, St. Peter's-square,

Manchester.

H. E. ROSCOE, Owens College, Manchester.

Local Secretaries for the Meeting.

Price 5s.

LIFE AND BOOKS; OR, RECORDS OF THOUGHT AND READING.

By **J. F. BOYES, M.A.**, St. John's College, Oxford.

"This volume might be accepted as a book of aphorisms, but in some respects it is superior to anything of the kind."

Morning Post. "The author of 'Life and Books' has long kept in solution the results of choice and multifarious reading, and they now re-appear fresh in form, tone, and colour, polished, clear, and sparkling. 'Life and Books' is a companion to be taken up for half an hour or half a day."—*Athenæum*.

"'Life and Books' contains many a true word pithily spoken."

Examiner. "A valuable and interesting work."—*London Review*.

"This volume will afford not alone subjects for pleasing perusal, but also, subjects suggestive in the highest degree, socially and morally."—*Observer*.

"This book is as scholarlike as it is free from pedantry."—*Critic*.

"Many of the author's remarks are sufficiently wise and deep to be read with pleasure and remembered with advantage."

Literary Gazette. "This volume displays an immense fund of reading, ready power of quotation, and contains many ideas worthy of remembrance."

Tait's Magazine. "We have dipped again and again into this volume, and at each dip have brought up something to reward us for our pains."—*Atlas*.

Axioms supported by agreeable quotations and literary allusions."—*Saturday Analyst*.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Italian Language.

MARIOTTI'S ITALIAN GRAMMAR.
Third Edition. A Practical Grammar of the Italian Language. New Edition, revised, enlarged, and improved. By A. GALLEGA, Italian Professor at University College, London, Author of 'Italy, Past and Present,' &c. 12mo. cloth, 3s.

"Mariotti's work recommends itself by its method and clearness, by its small bulk, and withal by its very abundant collection of short and pithy examples illustrating brief and precise rules. The Exercises also are short and simple, and always to the point." *Examiner*, Feb. 30, 1858.
"For the English student of the Italian language there can be no better grammar."—*Athenæum*.

BIAGGI'S PROSATORI ITALIANI. Specimens of Italian Prose Writers, from the 13th Century to the present time, preceded by a Selection of Easy Extracts, with Explanatory Notes by ANTONIO BIAGGI. Thick 12mo. cloth, 6s.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Easy German Readings.

I. NIEBUHR'S GRIECHISCHE HEROEN- GESCHICHTEN. Tales of the Greek Heroes, the German Text, with Grammatical and Explanatory Notes, Questions for Conversation, and a complete Vocabulary, by Dr. A. BUCHHEIM. Second Edition. 12mo. cloth, 3s. 6d.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Easy German Readings.

II. GOETHE. AUS GOETHE'S ITALIEN- ISCHER REISE. Sketches of Travels in Italy, the German Text, with Idiomatic and Explanatory Notes, Questions for Conversation, and a complete Vocabulary, by Dr. A. BUCHHEIM. 12mo. cloth, 3s. 6d.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Easy German Readings.

III. OTTÉ'S (E. C.) DIE WAISE, a German Tale, by NIERITZ, with numerous Explanatory Notes for Beginners, and a complete Vocabulary. 12mo. cloth, 3s. 6d.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Now ready, the 4th Edition,

APEL'S GERMAN SCHOOL GRAMMAR and EXERCISES, according to Dr. Becker's Views, with a Complete Course of Exercises, by H. APEL. 4th Edition, thoroughly revised, and embodying a New Method. Cloth boards, 12mo. 6s.

A Key to the Exercises in Apel's School Grammar. 12mo. cloth, 4s.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

The German Poets.

APEL'S GERMAN POETRY. A Collection of German Poetry for the Use of Schools and Families, containing nearly 300 Pieces, selected from the Works of 70 different Authors. 12mo. cloth, 5s.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

The 16th Edition,

WILLIAMS' (T. S.) MODERN GERMAN and ENGLISH CONVERSATIONS, and Elementary Phrases. The German revised and corrected by A. KOKE-MÜLLER. 16th Edition, improved and re-edited. Cloth boards, 1860, 3s. 6d.

A sale of 40,000 copies of this eminently useful little book testifies sufficiently to its excellence. It is used in numerous first-rate Colleges both in England and in Germany.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

German Made Easy.

SCHMIDT'S (J. A. F.) GERMAN GUIDE, a Practical and Easy German Method for Beginners: Rules, Exercises, Grammatical Questions, and Vocabulary. Course I. II. 2nd Edition. In 1 vol. 12mo. cloth, 3s.

— The Same. First Course. 2nd Edition. 12mo. cloth, 1s. 6d.
— The Same. Second Course. 2nd Edition. 12mo. cloth, 1s. 6d.
— The Same. Third Course, for more advanced Students. 12mo. cloth, 1s. 6d.

"Schmidt's Guide is on Ahn's Method, improved by a Professor who has had many years' practice in teaching German in this country. The first two Courses in one form an excellent School-Book."

SCHMIDT'S GERMAN READING-BOOK for BEGINNERS: a Companion to the German Guide. 12mo. cloth, 1s. 6d.

Also, by the same Author,

SCHMIDT'S THE BOY and the BIBLE, a German Story; to which is added, a Second Version, with the English Interlinear, on the Hamiltonian Method. 2nd Edition. 12mo. cloth, price 2s. 6d.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

German for Beginners.

APEL'S SHORT and PRACTICAL GERMAN GRAMMAR for BEGINNERS, with copious Examples and Exercises. 12mo. cloth, price 2s. 6d.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

German Dramas for Schools.

DEUTSCHES THEATER. MODERN GERMAN PLAYS for Schools. 1. Eigensinn (Obstinacy), Dichter und Page (The Poet and the Page), with Idiomatic Notes and complete Vocabulary, by Dr. BUCHHEIM. 12mo. cloth, 2s. 6d.

The object of the Editor has been to select a couple of easy German Dramas, at the same time interesting and free from anything that might make them objectionable for School use.

IFFLAND. DAS GEWISSEN, a Drama; the German Text, with copious Grammatical and Explanatory Notes, and a complete Vocabulary, by J. W. FRAEDERS-DORFF, Taylor Inst. Oxford. 12mo. cloth, 2s. 6d.

LESSING'S MINNA VON BARHELM, the German Text, with Explanatory Notes for Translating into English, and a complete Vocabulary, by J. A. F. SCHMIDT. 12mo. cloth, 2s. 6d.

SCHILLER'S NEPHEW AS UNCLE, the German Text, with Explanatory Notes for Translating into English, and a complete Vocabulary, by Dr. BUCHHEIM. 2nd Edition. 12mo. cloth, 1s. 6d.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Second Edition, 12mo. cloth, price 3s.

GOETHE'S FAUST (the first portion), with an Analytical Translation and Grammatical and Explanatory Notes, by Dr. E. FEITHMAN. 12mo. cloth, 3s.

. This contains that portion of Faust which can be read in Schools.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

In square 12mo. cloth, each 2s. 6d.

Bertrand's French School Classics.

VOLTAIRE'S HISTOIRE de CHARLES XII. A New Edition, for the Use of Schools, with an English Vocabulary, by M. BERTRAND. 12mo. cloth boards, 2s. 6d.

VOLTAIRE'S HISTOIRE de PIERRE LE GRAND. A New Edition, for the Use of Schools, with an English Vocabulary, by M. BERTRAND. 12mo. cloth boards, 2s. 6d.

FÉNELON. Les AVENTURES de TÉLÉMAQUE, fils d'ULYSSE. A New Edition, for the Use of Schools, with an English Vocabulary, by M. BERTRAND. 12mo. cloth boards, 2s. 6d.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Just published,

BUCHHEIM'S NOUVEAU THÉÂTRE FRANÇAIS. Modern French Plays, edited for Schools, with Idiomatic Notes and a complete Vocabulary. Part I. Les Deux Petits Savoyards—le Mousse. 12mo. cloth, 2s. 6d.

By the same Author,
BUCHHEIM'S FRENCH READER. Selections in Prose and Poetry, edited, with Explanatory Notes. 12mo. cloth, 1s. 6d.

. The Two Works are companions to the Author's Edition of Ahn's French Method.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Ahn's Easy French Method.

1s. 6d. each Course.

AHN-BUCHHEIM'S FRENCH METHOD. A Short, Practical, and Easy Method of learning the French language. The first Complete Edition, adapted for the use of English Students, from the 100th original edition, with additions by Dr. A. BUCHHEIM. First and Second Course. 2nd Edition. 2 vols. in 1. 340 pp. 12mo. Cloth boards, 3s.

AHN'S FRENCH METHOD [Buchheim's Edition], &c. First Course, preceded by a Guide to Pronunciation. 2nd Edition. 173 pp. 12mo. Cloth, 1s. 6d.

AHN'S FRENCH METHOD [Buchheim's Edition], &c. Second Course. Exercises, Dialogues, Tales, Letters, a Play, and Vocabulary. 168 pp. 12mo. Cloth, 1s. 6d.

AHN'S Key to the Exercises in Course I. II. each 6d.

AHN'S FRENCH METHOD. Part III. A FRENCH Prose and Poetical READER, by Dr. A. BUCHHEIM. 156 pp. 12mo. Cloth, 1s. 6d.

. As there are many so-called 'Ahn's French Method,' the Publishers request that Ahn-Buchheim's Method may be distinctly specified.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

Ahn's French School Grammar.

AHN-BUCHHEIM'S Complete FRENCH SCHOOL GRAMMAR and Exercises, specially adapted for the Use of English Schools, by Dr. N. BUCHHEIM. 338 pp. crown 8vo. Cloth boards, price 4s.

Or separately—
— French School Grammar. 218 pp. crown 8vo. Cloth, price 3s.

— Exercises for the School Grammar. 172 pp. Cloth, price 2s. 6d.

. This is an adaptation for English Schools of the celebrated French School Grammar of Ahn, which in Germany has reached 22 large Editions. It is not to be confounded with the 'Practical and Easy Method,' nor with the many spurious so-called Ahn's Grammars. In ordering it, 'Ahn-Buchheim's French Grammar,' published by W. & N., should be specified. It is used at Rugby and many other public schools.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

2 vols. 8vo. cloth, price 21s.

SOPHOCLES TRAGŒDIAE, the Greek Text, Edited, with Annotations, Introductions, &c. by EDWARD WUNDER. A New Edition, with the Notes translated into English, and a collation of Dindorf's Text. 2 vols. 8vo. Cloth boards, 21s.

Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh; and D. Nutt, 270, Strand, London.

The Second Edition, 8vo. price 3s.

SOPHOCLES OEDIPUS REX, the Greek Text, edited, with Annotations, Introductions, &c. by EDWARD WUNDER. A New Edition, with the Notes translated into English, and a collation of Dindorf's Text. 2nd Edition. 8vo. 3s.

By WILLIAM DAWBARN. London: Arthur Hall, Virtue & Co. 30, Parmenter-row. Liverpool: James Wollard, 54, Castle-street.

Just published,
"THE CLERICAL JOE MILLER."
A VOICE FROM A MASK.
By DOMINO.

"Vox et præterea nihil."

"A collection of laughable stories about the Church and Clergymen. It recalls the stock jokes of the 'Epistolæ Obscurorum Virorum' of the Reformation time, and the good stories about the monks which Reuchlin and Erasmus delighted in."
—*Saturday Review*, June 1.
"A picture of everyday clerical life, they portray persons in gown and mitre."
"It is just such a book as Rabelais or Sydney Smith would have been proud to own."
"A collection of amusing stories, and can be opened at any page, and laid down at any moment."
—*Morning Post*.
London: Walker & Co. 128, Strand.

NOW COMPLETE IN ONE VOLUME.

Elegantly bound in cloth, gilt edges, price 5s. 6d.

THE GENERA AND SPECIES OF BRITISH BUTTERFLIES. Illustrated and Classified according to the System now adopted in the British Museum.
By H. NOEL HUMPHREYS.

This work includes every known Species, in a series of carefully coloured Plates, in which these beautiful insects are represented in their successive stages of Caterpillar, Chrysalis and Butterfly, with the Plants on which they feed in the larva state. With Descriptive Letter-press. Uniform with the 'Genera of British Moths,' by the same Author.

Sent post free on receipt of a Post-Office Order for the amount.
London: Paul Jerrard & Son, 170, Fleet-street, E.C.

NOW COMPLETE IN TWO VOLUMES.

Elegantly bound in cloth, gilt edges, price 5s. 6d. each vol.

THE GENERA OF BRITISH MOTHS. Classified according to the System now adopted in the British Museum.
By H. NOEL HUMPHREYS.

Illustrated by a Series of Picturesque Groups of Moths, accompanied by their respective Caterpillars, and the Plants on which they are found.

The Plates are drawn and coloured from Natural Objects, with Descriptive Letter-press. The volumes contain a popular account of each genus of British Moths, with a notice of every Species it contains. All the novelties added to the Catalogue of British Species up to the present time described, and a large proportion of them are selected to illustrate the Genera in which they belong. The work is of handsome size (imperial octavo), and printed on thick paper. It is to form a handsome drawing-room book, as well as one of instruction and useful reference on the subject.

Sent post free on receipt of a Post-Office Order for the amount.
London: Paul Jerrard & Son, 170, Fleet-street, E.C.

Seventh Edition, fcap. 8s. 6d. sewed; or 3s. cloth.

THE WATER CURE IN CHRONIC DISEASE: an Exposition of the Causes, Progress, and Termination of various Chronic Diseases of the Digestive Organs, Lungs, Nerves, Limbs, and Skin; and of their Treatment by Water and other Hygienic Means. By JAMES MANN GULLY, M.D. L.R.C.S. and F.R.P.S. Edinburgh, F.R.M.C.S. London, &c.

"Dr. Gully has published a large and elaborate work on the Water Cure, which is, we think, the best treatise on the subject that has yet appeared."
—*Westminster Review*.

"Dr. Gully's book is evidently written by a well-educated medical man. This work is by far the most scientific that we have seen on hydropathy."
—*Athenæum*.

"Of all the expositions which have been published respecting the Water Cure, this is the most tangible and complete."
—*Literary Gazette*.

London: Simpkin, Marshall & Co. Stationers' Hall-court.

TEXT-BOOKS ON ENGLISH HISTORY.
By Mr. ROBERT ROSS, Lecturer on History, Normal College, Cheltenham.

1.

MANUAL OF ENGLISH HISTORY for SENIOR CLASSES IN SCHOOLS; or, a Second Book for Pupils preparing for Public Examinations. Crown 8vo. 5s. 6d. cloth. [Just published.]

—*Athenæum*.

3.

OUTLINES OF ENGLISH HISTORY for JUNIOR CLASSES IN SCHOOLS; or, a First Book for Pupils preparing for Public Examinations. Second Edition, revised and enlarged. Fcap. 3s. 6d. cloth.

"There is life and symmetry here, which are so often sacrificed in the process of abbreviation."
—*Papers for the Schoolmaster*.
London: Simpkin, Marshall & Co. Stationers' Hall-court.

THE SYSTEM OF THE WEATHER.

Just published, in cloth, gilt, elegantly printed, price 10s.

ELEMENTS OF THE WEATHER, including a Synopsis and Defence of the 'Cycle of the Seasons,' by the late Lieutenant GEORGE MACKENZIE, of Perth; with an Analysis of all the Recent Discoveries in Atmospheric Phenomena promulgated by the Board of Trade and the Royal Society. By JAMES WOODS.

In this Treatise is a Diagram of the Periods composing the 'Cycle of the Seasons' for 108 years, from 1801 to 1908, including an authentic record of the Prices of Wheat from 1801 to 1855.
Hodson & Son, 22, Portugal-street, London; and all Booksellers.

Just published, post 8vo. 7s. 6d.

TEUTON: A POEM.
By CHRISTOPHER JAMES RIETHMÜLLER.

"Teuton" is a poem, and written by a poet."
—*Athenæum*.
"It is, in fact, a production full of ripe thought and vigorous writing."
—*Literary Gazette*.

"A really good poetical work is not a thing of every day's occurrence, and 'Teuton' will therefore be gladly welcomed."
—*Observer*.

"The thoughts, the sentiments and the convictions, which are gracefully and often eloquently expressed in this little volume, are valuable, laudable, and often noble."
—*Spectator*.
"We hesitate not to say that the volume contains passages, even whole pages, that would do honour to any living poet."
—*Glasgow Herald*.

Bell & Daldy, 126, Fleet-street.

BEWICK'S HISTORY OF BIRDS.

London: sold by Longman & Co.; Simpkin, Marshall & Co.; and all Booksellers.

Second Edition, post 8vo. cloth, 5s.

HYDROPATHY; or, HYGIENIC MEDICINE. By EDWARD W. LANE, M.A., M.D. Edin. Physician to the Establishment at Sudbrook Park, Richmond, Surrey.

"This is by far the clearest and most rational exposition that has yet been given to the English public of the principles of the method of medical treatment which owes its origin to Vincent Priessnitz."
—*Examiner*.

"A book of consummate ability."
—*Press*.
London: John Churchill, New Burlington-street.

Just published, 18mo. cloth, price 1s. 4d.; paper covers, 1s.

DAILY SERVICES for CHRISTIAN HOUSEHOLDS. Compiled and arranged by the Rev. H. STOBART, M.A.

It may also be had bound with the Prayer-book Version of the Psalms, price 3s. cloth.
"We commend Mr. Stobart's 'Daily Services for Christian Households' on account of their fullness of provision for 'special occasions,' as well as for general excellence of arrangement and soundness of principle."
—*Guardian*, June 19, 1861.
Oxford and London: J. H. & Jas. Parker.

Just ready, post 8vo. limp cloth, price 2s. 6d.

PETER the APOSTLE NEVER at ROME, SHOWN TO BE AN HISTORICAL FACT: with a Dissertation of the Apostolic Authority of the Symbol or Creed of the Church. By J. H. BROWN, M.A., Rector of Middleton-in-Teesdale.

Oxford and London: J. H. & Jas. Parker.

LIBRARY OF THE FATHERS.

Just published, 8vo. cloth, price 5s.

THE WORKS OF S. JUSTIN MARTYR, Translated, with Notes and Indices.

This volume completes the series of English Translations. A very few complete sets may still be had, price 18s. 11s. the 41 volumes. But several of the volumes are nearly out of print, and will not be reprinted. Persons wishing to complete their sets are recommended to make early application.
Oxford: J. H. & Jas. Parker. London: F. & J. Rivington.

NEW NOVEL BY THE REV. J. PYCROFT, Author of 'Twenty Years in the Church,' 'Elkerton Rectory,' &c.

AGONY POINT; or, the Groans of Gentility.

Now ready, 3 vols. post 8vo. price 5s.
"The sketches of character and the general remarks throughout the book are decidedly clever; and 'Agony Point' must be pronounced a good novel, both for and of the times; very good, both as regards design and execution."
—*Globe*, June 17.
"This is a capital story, with an excellent and useful moral.... Mr. Pycroft has, in a series of admirably-drawn pictures of social life, taught, or we should rather say illustrated, the wisdom of the apostolic advice, 'Grieve no man anything.'"
—*Observer*, June 22.
"Mr. Pycroft's former works have already obtained for him a high reputation, which the work before us, with its sound sense, animated style, and keen perceptions of the follies and fallacies of our social existence, will probably increase."
—*Sun*, June 27.
L. Booth, 307, Regent-street, W.

This day is published, in crown 8vo. price 6s.

THE PAST AND PRESENT LIFE OF THE GLOBE:

Just published, 18mo. cloth, with Fifty-two Illustrations, price 2s.

STREAKS OF LIGHT; or, Fifty-two Facts from the Bible for the Fifty-two Sundays of the Year. By the Author of 'Peep of Day,' 'Near Home,' &c.

London: Hatchard & Co. 187, Piccadilly.

THE COMET.

GUY'S ELEMENTS OF ASTRONOMY possesses a better Description and History of Comets than any elementary work published. The last edition, edited by JOHN RIDDLE, Master of the Royal Naval School, Greenwich, brings the interesting subject down to the present times; he observes that the last ten years have been more prolific of discoveries among the distant world of stars than the whole previous periods from the creation of the world. The work contains 18 fine Plates, is neatly bound, price 5s.

London: Simpkin, Marshall & Co. Stationers' Hall-court.

In a few days, in fcap. 8vo. price 5s.

OBSCURE TEXTS OF SCRIPTURE ILLUSTRATED. BY MARY C. HUME.

London: George Manwaring, 8, King William-street, Strand.

In a few days, in post 8vo.

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 2 vols. with Portraits. 21s.

"Miss Freer's ability and research have raised her to a conspicuous position among our historical writers. Among the most prominent of her qualities is a rare spirit of moderation and impartiality. Important and eventful as the reign of Henry IV. was, its details are little known by general readers among us, and therefore, in presenting so complete and interesting a narrative, Miss Freer has done good service to the public, besides enhancing her own well-earned reputation."—*Sun*.
"This is the greatest work to which Miss Freer has dedicated her powers. She draws her materials from sources mostly original, and she has selected for illustration a period the interest of which can scarcely be said to be second to any in modern times. There was romance in Henry the Fourth's character, and in his career, and events of importance were grouped around his life. Miss Freer writes only after the most conscientious research, and with a mastery of the subject which will go far towards explaining the vitality and animation which so distinguish her productions. Where a style of such supreme attractiveness is combined with such accuracy in detail, it is impossible not to give the work a high place in the literature of the day."—*Sunday Times*.

A SAUNTER THROUGH THE WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"The title of this work is unexceptionable: it is happily and appropriately chosen to denote the gossiping contents of the book—light, chatty, and amusing. The author quietly puts his arm in that of his reader, and, as he passes on from Hyde-park Corner down Piccadilly or Pall Mall to the Haymarket and Soho, points out the anecdotes connected with each locality. Touches of quiet, genial humour, playful interruptions and amusing stories told in a quaint, unaffected style contribute to the attractive conversational tone adopted, as he saunters along with his friend of the hour. The reader will find himself agreeably carried on from the first to the last page of the 'Saunter' by its cheerful tone and entertaining gossip."—*Literary Gazette*.

THE OKAVANGO RIVER. A Nar-

ative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s. bound. (Just ready.)

JAVA; or, How to Manage a Colony:

Showing a Practical Solution of the Questions now affecting British India. By J. W. B. MONEY, Esq. 2 vols. 21s.

NOTHING NEW. By the Author of

'JOHN HALIFAX, GENTLEMAN.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of Hurst & Blackett's STANDARD LIBRARY OF CHEAP EDITIONS OF POPULAR MODERN WORKS. 5s. bound.

"'Nothing New' displays all those superior merits which have made 'John Halifax' one of the most popular works of the day."—*Post*.

RECOLLECTIONS of a FOX-

HUNTER. By "SCRUTATOR." 1 vol. with Illustrations.

"This is Scrutator's best work. It is a sort of memoir of the hearty and accomplished writer, including pleasant notices of sporting celebrities, such as Ascheton Smith, &c.; but the real burden of the volume consists of experiences in the hunting field—real truths conveying excellent lessons as to horse and hound, and insuring for the volume an honoured place in every sportsman's library."—*Nra*.

A BOOK ABOUT DOCTORS. By

J. C. JEAFFRESON, Esq. New, Revised, and Cheaper Edition, in 1 vol. 10s. 6d. bound.

"This is a rare book: a compliment to the medical profession, and an acquisition to its members: a book to be read and re-read: fit for the study and the consulting-room, as well as the drawing-room table and the circulating library."—*Lancet*.

THE NEW NOVELS.

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONEY,' 'WILDFLOWER,' &c. 3 vols.

"This is the best story hitherto written by a very pleasant novelist. It is essentially, and throughout, a good story—rapid and rich in incident—that nobody will leave unfinished. The book asserts a high standard of right, but it nowhere preaches, and is full of the cheerfulness and tolerance of Christianity. It is one of the pleasantest and wholesomest of the novels of the season."—*Examiner*.

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

HOMELESS; or, a Poet's Inner Life.

By M. GOLDSCHMIDT, Author of 'JACOB BENJAMIN.' 3 v.

"There is much that is eloquent and beautiful in this book. The whole aim of the work is elevated and noble."—*Athenæum*.

THINKING and ACTING. By a

CLERGYMAN'S DAUGHTER, Author of 'HELEN LINDSAY,' 'OUR HOMELESS POOR,' &c. 2 vols.

"There is a charm about this tale which immediately captivates the reader."—*Messenger*.

WHEEL WITHIN WHEEL. By the

Author of 'ALICE WENTWORTH,' 'THE LEES OF BLENDON HALL,' &c. 3 vols.

NO CHURCH. By the Author of

'HIGH CHURCH.' THIRD EDITION. 3 vols.

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON.' 3 vols. [Just ready.]

NEW GENERAL ATLAS.

This day is published, in imperial folio, half bound in russia or morocco, price 5l. 15s. 6d.

THE ROYAL ATLAS OF MODERN GEOGRAPHY:

LITERATURE

An American Dictionary of the English Language. By Noah Webster, LL.D. Revised and Enlarged by Chauncey A. Goodrich, Professor in Yale College. (Springfield, Mass.; London, Longman & Co.)

A Dictionary of the English Language. By Joseph E. Worcester, LL.D. (Low & Co.)

Two exotic words have been introduced into English for what, if the analogy of most of its kindred languages had been followed, would have been called a "Word-book." The two are so alike in signification that Johnson and Webster define a "Dictionary" as a "Lexicon," and a "Lexicon" as a "Dictionary." It would perhaps be an improvement if, as in the case of many other terms originally synonymous, each of these words were used to convey a different shade of meaning. There are, in fact, two classes of Word-books of different character and uses: the book of hard words, mainly devoted to explaining what is technical and scientific; and the book which aims at explaining also the easy, familiar words—by far the harder task of the two. There are such works as that of Nathan Bailey, in which, while the pages bristle with terms which an Englishman hardly recognizes as English, the word "for" is summarily and luminously disposed of as "a causal particle"; and there is the great work of Samuel Johnson in which the shades of meaning assigned to "for" amount to forty. Such a work as Bailey's might be called a "Lexicon," and such a one as Johnson's a "Dictionary."

For the compilation of a good "Lexicon," the requisites are sound learning, unwearied diligence, and plain common sense—a combination not often met with; for that of a good "Dictionary," taste, acuteness, and a host of qualities are also required, the union of which may deserve the name of genius. So many and so various, in fact, are the indispensable qualifications, that in many countries it has been thought impossible to find them united in one man or to perform the task except by the combined forces of an Academy. In Italy, in France, in Spain, in Portugal, in Russia, in Denmark, in Hungary, in Holland, dictionaries have been made, or are making, by this instrumentality. In Portugal, indeed, the Dictionary of the Academy, the first volume of which appeared in 1793, has never advanced beyond the letter A, and in Denmark, where the first volume appeared in the same year—sixty-eight years ago—the Academicians are still, we believe, in the letter S; while, after years of discussion, nothing of the great Dutch and Hungarian dictionaries has as yet appeared in print. On the other hand, the dictionaries of Italy, France, and Spain have had a vogue of a century or centuries, have passed through numerous editions, and amid all the criticism with which they have been assailed, have exercised an important influence on the languages they represent. In England, a proposal has been made, and is now in course of execution, to adopt a principle of division of labour in the construction of a Dictionary, which may possibly lead to our obtaining something more complete in its way than has ever hitherto been produced. An invitation has been addressed by the Philological Society to the English-speaking public at large—and it has been largely responded to on both sides of the Atlantic—to join in performing an operation in lexicography, analogous to what the Highlanders call the "Tinchel" in the operations of the chase—to surround and drive the whole herd of English

vocables from their places of resort or concealment to pass before a select band of lexicographers, who are to bring down the game. There is something of the Academy and something of the Joint-Stock Company combined in this proposal, to which we heartily wish success.

Whatever may be the advantages of Academies, there can, however, be no doubt that the great Dictionaries which have been produced by individuals, from the time when Johnson was said to have vanquished single-handed his forty French competitors, have taken a place in that class of literature second to none. The great masterpieces of Johnson for English, of Adelung for German—we may add of Linde for Polish, and of Jungmann for Bohemian—will apparently always remain the foundation of the standard lexicography of their respective languages, unless, indeed, that of Adelung is superseded by the as yet incomplete Dictionary commenced by the brothers Grimm. Even now, a new edition of Johnson is promised, under the able editorship of Dr. R. G. Latham; and the Philological Society announces its intention of retaining everything of the chief of English dictionary-makers which it finds conducive to the execution of its own more extensive plan.

The two volumes before us are rather of the class of "Lexicons" than of "Dictionaries," but they also bear in every page traces of their obligations to Johnson. They are both of American origin, a fact which does credit to America as showing the enlightened interest it takes in our common language. The best Dictionary of Portuguese is, it may be remarked, of American origin,—that of the Brazilian, Moraes Silva. The most popular English Grammar—that of Lindley Murray—is the production of an American, but of an American settled in England,—while, as appears by the biography of Dr. Webster, he only came to England at the age of sixty-six, and spent but nine months here, eight of which he employed at Cambridge in completing the manuscript of his Dictionary. His work, which was published in 1828, had an immense success at its first appearance, a success which appears, in fact, to have given birth to Dr. Worcester's. Both of the Doctors seem to have pursued lexicography for many years as a profession, diversifying their more ambitious labours with the occasional production of such lighter works as grammars and spelling-books. In 1806 Webster issued a 'Compendious Dictionary of the English Language,' and in 1807 a 'Dictionary for the Use of Common Schools'; in 1829 and subsequent years he followed up his great work by four different abridgments for the use of the primary schools, the counting-house, &c. &c. No less than seven dictionaries of the English language bearing his name appear to have issued from the press during his lifetime. Dr. Worcester, according to the 'Catalogue of English Dictionaries,' published by himself, is equally prolific, the one now before us being also the seventh of his family of dictionaries; and as he, no doubt, meditates abridgments and compendiums, we know not by how many he may ultimately surpass his model.

Each of the Dictionaries is contained in one ponderous and, to say the truth, somewhat unwieldy quarto volume; Dr. Webster's extending to seventeen hundred and fifty, and Dr. Worcester's to eighteen hundred and fifty-four pages. Most of these pages are, like those of the *Athenæum*, divided into three columns with the object of using a type so small that each page contains the matter of five or six of an ordinary octavo. The advantage of possessing the whole of a book of reference in one volume

is certainly great, but this advantage, like all others, may be bought too dear. The whole of the 'Encyclopædia Britannica,' or the whole of the contents of an ordinary bookcase, might be crammed into a single volume of the size of the *Times*, with a proportionate number of pages: but who would not prefer to have his encyclopædia or his bookcase as they are? There was an enterprising Parisian publisher who, some years ago, managed to compress the seventy volumes of the ordinary editions of Voltaire into a single tome, such a miracle of typography that the person who could read it without injuring his eyes would have been a miracle of eyesight. It found so few purchasers that it has found no imitator.

One of the most prominent features of both the Dictionaries, in their present state, is the introduction of illustrative woodcuts, very neatly executed. In Worcester's, they are, as usual with woodcuts, dispersed over the pages in close connexion with the letter-press they are intended to illustrate; in Webster's, they figure in a body at the commencement of the volume. So unusual an arrangement at once suggests the notion that the pictures of the new "Pictorial Edition" were an afterthought; and this, on examination, turns out to be the case. The more than thirteen hundred pages of the dictionary-part of the London edition of 1861 correspond with those of the Massachusetts edition of 1848 except in one particular. At the bottom of each page are now the standing references,—“* See Pictorial Illustrations”; “† See Table of Synonyms”; and, of course, in the page above, the * and † are also introduced where requisite. The new edition is thus, in the main, only a new re-issue of the old stereotype. The notion of illustrations might be supposed to be immediately taken from the rival work of Worcester; but the representatives of Webster state, in their Preface, that they have borrowed it from Ogilvie's 'Imperial Dictionary,' an improved edition of Webster, published in 1850, at Glasgow. The idea is, at least, a hundred and twenty years older than Ogilvie. The title of the first edition of Bailey's Dictionary, published in 1730, runs thus:—'Dictionarium Britannicum; or, a more Compleat, Universal, Etymological English Dictionary than any Extant, illustrated with near Five Hundred Cuts, for giving a clearer Idea of those Figures not so well apprehended by verbal Description.' The plan is so remarkably well adapted for conveying real information on technical subjects to the mind of a learner, that it might be a legitimate matter of surprise that, once introduced, it should ever have been allowed to drop out of use and memory. It is a token that it has, that, in a 'History of English Lexicography' and a 'Catalogue of English Dictionaries,' which we find among the preliminary matter of Dr. Worcester, though Bailey is mentioned at some length in both, this feature of his plan is unnoticed. It would seem, indeed, from some confusion in the Doctor's account of Bailey, that he had never seen the original editions, which were, probably, inaccessible to him in America. Both writer and reader are sure to suffer when such a subject as the history of English Lexicography is treated of out of reach of the great libraries of England.

The illustrations to Dr. Webster's "Pictorial Edition" illustrate, among other things, not only the use, but the abuse, that may be made of the plan. A series of representations of the "coats of arms" belonging to different kingdoms and states, with their mottoes in Latin, French and Spanish, can hardly be considered as belonging to a Dictionary of the English, or,

indeed, any other language. In thus stepping out of their province, the editors of the illustrations have chanced to step into some mistakes. They tell us of the motto "*Honi soit qui mal y pense*," that "it is said to be the expression employed by the nobleman"—we presume the nobleman who founded the order—"on tendering to the Countess of Salisbury her garter." The motto of the state of Oregon—"Alis volat propriis"—is rendered "*I fly with my own wing*." That of Minnesota is, it must be acknowledged, couched in such Minnesota Latin that it almost requires a Minnesota scholar to construe it. "*Civitas successit barbarum*" is given as the original, and "*Civilization succeeds barbarism*" as the translation. The motto of Michigan is, we observe, taken from the celebrated inscription to the memory of Sir Christopher Wren under the dome of St. Paul's—"Si monumentum queris circumspecte." This the men of Michigan have improved into "*Si queris peninsulam amœnam circumspecte*"—"If you seek a beautiful peninsula, look around you." How felicitous!

Another prominent feature of one of the Dictionaries—but of one only, Dr. Webster's—is an elaborate Introduction, of such dimensions that, if separately printed, it would of itself fill an ordinary octavo volume. For this Introduction a particular value is claimed, from the light it throws on the composition of languages and the derivation of words. In the Author's Preface the author's own statements on this head are of a very positive and of a somewhat self-complacent character:—

"I found myself embarrassed at every step [he says] for want of a knowledge of the origin of words which Johnson, Bailey, Junius, Skinner and some other authors do not afford the means of obtaining. Then laying aside my manuscripts and all books treating of language, except lexicons and dictionaries, I endeavoured, by a diligent comparison of words having the same or cognate radical letters in about twenty languages, to obtain a more correct knowledge of the primary sense of original words, of the affinities between the English and many other languages, and thus to enable myself to trace words to their source. I had not pursued this course more than three or four years before I discovered that I had to unlearn a great deal that I had spent years in learning, and that it was necessary for me to go back to the first rudiments of a branch of erudition which I had before cultivated, as I supposed, with success. I spent ten years in this comparison of radical words and in forming a *Synopsis of the principal Words in twenty Languages, arranged in classes under their primary Elements or Letters*. The result has been to open what are to me new views of language and to unfold what appear to be the genuine principles on which these languages are constructed."

Alas! an examination of Dr. Webster's Introduction leads to a conviction that Dr. Webster might again have found "a great deal to unlearn" in what he had spent so many years in teaching himself. It is, indeed, not easy to conceive how, with any attention to the history of language at all, he could have fallen into some of the blunders in very important branches of the subject which meet us at almost every turn. Take, for instance, his account of the composition of one of the most prominent languages of the world:—"It must be observed further that the Spanish language contains some words of African origin, introduced by the Carthaginians before the Roman conquest of Spain, or afterwards by the Moors, who for several centuries were masters of that country." Could Dr. Webster have forgotten that it was the Arabs who conquered Spain and introduced into it the Arabic language, or did he suppose that the Arabic

language was of African origin? A reader unacquainted with the subject might suppose that the "Moors" spoke "Moorish." He might also suppose that the present Spanish language was in existence in some shape before the Carthaginian conquests, and, of course, therefore, before the Roman conquests in Spain. These are only legitimate inferences from Dr. Webster's statements, and they are as utterly opposed to unquestionable facts as would be the assumption that English was spoken at Boston before Columbus discovered America.—

"The German, Dutch or Belgic, Anglo-Saxon, Danish and Swedish languages are [says Dr. Webster] of Teutonic or Gothic origin. They are all closely allied, a great part of the words in them all being the same or from the same roots, with different prefixes or affixes. There is, however, a greater difference between the Danish and Swedish, which are of the Gothic stock, and the German and Dutch, which are of Teutonic origin, than between two languages of the same stock, as between the Danish and Swedish."

The information that there is less difference between languages of the same stock than between languages of different stocks is surely no more required than that there is a closer relationship between persons of the same family than persons of different families. Dr. Webster proceeds:—"The Norwegian, Icelandic, and some of the languages or dialects of Switzerland, belong to the same stock, but of these I have no particular knowledge." The latter clause of the sentence is the only one to which unconditional assent can be given. What is the "same stock" referred to? If Teutonic, the "Norwegian and Icelandic" do not belong to it; if Gothic, the "languages or dialects of Switzerland" do not. If the "same stock" is here meant to signify both the Teutonic and Gothic combined, a distinction which appears to be drawn in one sentence is obliterated in that which follows. What, moreover, are the languages that Dr. Webster means to point out? The "Norwegian" language does not exist distinct from the other languages referred to in his list. The modern Norwegian is the same language as the modern Danish; the ancient Norwegian is the same language as the ancient Icelandic. How is it, also, that he places Icelandic where he does, at the end of his list of Gothic languages, in a position as incongruous as if he had placed Latin after French and Italian in a list of the languages of the Romanic family? What does he mean by "some of the languages or dialects of Switzerland"? The only distinct language of Switzerland is the so-called "Romansh," spoken among the Grisons, but that language is neither Gothic nor Teutonic. The other languages of the country are French, Italian, and German, of which French and Italian are not Gothic or Teutonic, and German has been already mentioned as belonging to the Teutonic stock, so that to mention it again is a useless repetition. That many of "the dialects of Switzerland" are dialects of German is certainly a fact, but if that is all which Dr. Webster means to convey, it must be acknowledged that his mode of making the communication is anything but lucid.

"The Basque, or Cantabrian, in Spain, the Gaelic in the north of Scotland, and the Hiberno-Celtic, or native language of Ireland, are," pursues Dr. Webster, "the purest remains of the ancient Celtic." The Basque, or Cantabrian, in Spain, is a language as thoroughly distinct in grammar and vocabulary from Gaelic and Irish as it is from English, and the notion that it had any connexion with them has long been an exploded error. That it should be repeated by Dr. Webster, and repeated without a shadow

of qualification, as if it were a well-known and established fact, instead of being precisely the reverse, only shows that Dr. Webster, as he had "no particular knowledge" of the "languages or dialects of Switzerland," had, also, "no particular knowledge" of this other subject, on which he unfortunately wrote with an air of authority.

The Doctor proceeds, in the next paragraph but one, to enlighten his readers as to the constituents of English, the object of his lifelong study. "It retains," he says, "a great number of words from the ancient languages of Britain, the Belgic, or Lloegrian, and the Cymraeg, or Welsh, particularly from the latter, and some from the Cornish." The Cymraeg, or Welsh, is still pretty tangibly extant, and not on our side of the Atlantic only, for by a recent Census of the American press we learned with some surprise that five Welsh newspapers are published in the United States. But how did Dr. Webster acquire a knowledge of the Belgic, or Lloegrian, to which he so familiarly refers, as if, at all events, it were one of the twenty languages of which he had turned over a lexicon. Is there in existence a single manuscript in the language? Is there a single memorial? Is there a proof that such a form of speech ever existed? Our best living Cornish scholar, indeed our only one, Mr. Edwin Norris, shows himself inclined, in his *Cornish Grammar*, to suppose that the language was formerly spoken over a large extent of country, and hence it might merit the name of Lloegrian, from Lloegr, the Welsh name for England; but Dr. Webster speaks of his Lloegrian as distinct from Cornish, and, indeed, an unsuspecting reader might imagine that it was a perfectly well-known tongue, that, perhaps, American newspapers were published in it, and that Dr. Webster was able to read them.

These are not mere questions of detail; an author who, after spending years in the investigation of language, could put upon record such statements as these is on a par with one who, treating of the history of England, should speak of the Reformation as preceding the Norman Conquest, or of the English as colonizing South America. A writer who commits such oversights may make, on other points, very happy and sagacious observations; and those who have an acquaintance with the subject, and are able to separate his corn from his chaff, may use him with advantage, but woe to the learner who falls into his hands. After such statements as these with regard to the languages of Spain and Switzerland, what amount of reliance should be placed in his speculations on Ethiopic and Syriac and Samaritan?

The uncritical habit of mind which is shown in the Introduction pervades the body of the Dictionary. In this case the exhibition of a single brick will be the best method of showing the nature of the building; and a comparison of the word we take with the same word in the Dictionary of Dr. Worcester will exemplify compendiously the differences and resemblances between the two. For a reason hereafter to be mentioned, the extract from Dr. Worcester may take precedence:—

From Dr. Worcester's Dictionary.

"ROMANCE, *n.* [Italian, *romanzo*, *romanza*; Spanish, *romance*; French, *roman*; *romance*, a ballad.]

"1. A work of fiction, in prose or verse, containing a relation of a series of adventures, usually of love or war, either marvellous or probable; a novel,—so called because this species of composition was first written in the *Romance* language.

"The earliest modern *romances* were collections of chivalrous adventures, chiefly founded on the lives and achievements of the warlike adherents of two sovereigns, one of whom, perhaps, had only a fabulous existence,

while the annals of the other have given rise to a wonderful series of fables.—Arthur and Charlemagne.—*Brande.*

"2. Any wild or extravagant story or invention of the imagination; a fiction, a falsehood.

A staple of romance and lies,
False tears and real perjuries.—*Prior.*

"3. (*Music.*) A small song-like piece of vocal or instrumental music, somewhat in the character of a ballad; a *romanza*.—*Warner.*"

So far Dr. Worcester.

From Dr. Webster's Dictionary.

"RO-MANCE' (ro-mans'), n. [French, *roman*; Italian, *romanzo*; Spanish, *romance*, the common vulgar language of Spain and *romance*; Portuguese, *idem*, any vulgar tongue and a species of poetry. Welsh, *rhym*, a rising over; *rhymant*, a rising over, a vaulting or springing, an omen, a figurative expression, *romance*, as an adjective, rising boldly, *romantic*; *rhymanta*, to rise over, to soar, to reach to a distance, to divine, to romance, to allegorize; *rhymanta*, to use figurative or high-flown language, &c. The Welsh retains the signification of the Oriental word from which *Rome* is derived; and, indeed, the sense of *romance* is evidently from the primitive sense of the root rather than from the use of the Roman language. The Welsh use of the word proves, also, the correctness of the foregoing derivation of *Roma* [from the Oriental name *Ramah*, elevated, that is, a hill], and overthrows the fabulous account of the origin of the word from Romulus or Remus. It is probable that this word is allied to *ramble*.]

"1. A fabulous relation or story of adventures and incidents designed for the entertainment of readers; a tale of extraordinary adventures, fictitious and often extravagant, usually a tale of love or war, subjects interesting the sensibilities of the heart or the passions of wonder and curiosity. *Romance* differs from the *novel* as it treats of actions and adventures of an unusual and wonderful character; that is, according to the Welsh signification, it vaults or soars beyond the limits of fact and real life, and often of probability.

"The first *romances* were a monstrous assemblage of histories, in which truth and fiction were blended without probability,—a composition of amorous adventures and the extravagant ideas of chivalry. *Encyclopædia.*

"2. A fiction."

We have taken Dr. Worcester's article first because it has the advantage of bringing before the reader the ordinary and received account of the origin of the word "Romance," before he directs his attention to the very original views of Dr. Webster on the subject. It is impossible to avoid a smile when, in perusing the Websterian article, we come to the passage that the word he describes is probably "allied to *ramble*." The statements it contains "soar" indeed "beyond the limits of fact and real life," and are themselves a "monstrous assemblage in which truth and fiction are blended without probability." There are few words of which the genealogy can be so satisfactorily traced as that of "Romance." Dr. Worcester gives clearly and correctly the usual narrative, that the first compositions of the kind were in the "Romance" language, so called as being derived from the language of the Romans, and gives some of the different forms in which the word exists in the Southern languages, from which it passed into ours, at least as early as when Chaucer translated the 'Romaunt of the Rose.' What authority has Dr. Webster for supposing that the Welsh, whose literature is singularly and remarkably poor in romances or novels, or tales of any kind, gave rise to the name by which they are known in languages that teem with them? The only volume of mediæval tales that is known in Welsh is called 'Mabinogion.' "We find in the 'Mabinogion,'" says Lady Charlotte Guest, who has edited them, "the evident counterpart of the continental Romance." To the first "Mabinogi" that is printed in her edition she appends a French '*Romans dou*

Chevalier au Lyon.' The word "Rhamant" does not appear in the sense of Romance in Davies's Welsh Dictionary of the seventeenth century or in Walters's Welsh Dictionary of the eighteenth, but is in both explained as "Omen," "Token," &c. It is assigned the sense of "Romance" apparently for the first time in Owen Pughe's Welsh Dictionary, which is notorious for the number of words it contains of Owen Pughe's own manufacture. He appends some extracts to show the use of the word "Rhamant"; but in none of them does it bear the meaning of "Romance." It has since been given in the dictionaries of Evans and Spurrell, and would thence appear to have made its way into modern Welsh. It is on the authority of a word of yesterday that Dr. Webster proceeds so confidently to overthrow the philological traditions of centuries.

The definitions of Dr. Worcester will not suffer in comparison with those of Dr. Webster, which are indeed faulty and feeble. "A fabulous relation or story of adventures" and "a tale of extraordinary adventures," two definitions in immediate sequence, seem to aim at pointing out a distinction, but convey no difference; and further on, the clause of the sentence, "subjects interesting to the sensibilities of the heart or the passions of wonder and curiosity," might be omitted without loss to the reader. The quotation given is too laxly described as from the "Encyclopædia," for there are more Encyclopædias than one; and they are apt to be in more volumes than one. The definition numbered 2, "A Fiction," is, we suppose, intended to convey the same meaning as the definition numbered 2. by Worcester,—but if so, it is as faulty from over-conciseness as definition numbered 1. is faulty from want of conciseness.

On the whole, it is far from a recommendation of the new edition of Webster's Dictionary that it is, as it professes to be, "Unabridged." One of the greatest improvements to be effected in it would be by abridging it of a quantity of the philological matter with which it is filled. In the comparison of the two articles in the two Dictionaries, the strongest advantage of Dr. Worcester's article is, that it does not contain a great deal that is given in the other. The Welsh and Romulus and Remus "shine by their absence."

The number of words added to the stock of Johnson and Richardson in both of the Dictionaries is very great, but the words have mostly been added to the language, if indeed they can be said to have been added to the language, since Johnson's time. They are chiefly scientific terms which are created by the mere extension of scientific discovery and by the arbitrary rule which has been adopted of using Latin or Greek derivatives for naming substances. A new acid is discovered, extracted from apples. If it were called "acid of apples" nothing new would be added to our dictionaries on that score; if it were called "apple-acid," still our dictionaries would not be swelled, unless all compounds were inserted. As the practice now is, we find in Webster's Dictionary, "Malic, adjective [Latin, *malum*, an apple], pertaining to apples, drawn from the juice of apples; as *malic acid*. *Chemistry*," and in Worcester's, "Malic, adjective [Latin, *malum* (Greek, *μηλον*), an apple]. (*Chem.*)—noting an acid obtained from the apple and several other fruits." Of course, if to-morrow a chemist obtains a peculiar acid from pears he may call it "Pyric acid," and with the same effect of adding a word to our lexicons and those of several other languages, for "malique," and "pyrique" are as easily produced in French as "malic" and

"pyric" in English; but words of this kind which are as much French and Italian as English, and more Latin than either, are merely part of the chemist's dialect of the various languages. They "may flourish or may fade" in thousands in the laboratory, without ever emerging into the fresh air. While they exist, however, it is perhaps necessary that they should be "registered"; that some notice should somewhere be taken of their existence; and this is done most amply, and, apparently, with considerable care, in both of the volumes before us. They thus, as we have said, supply the want of a modern Lexicon, but still leave unsupplied the want of a modern dictionary.

Hitherto we have had to speak of points in which the new Dictionaries surpass, or claim to surpass, the old; but there is one feature in which the advantage is decidedly on the side of the seniors. Compared to Johnson's or Richardson's, the works of Webster and Worcester are by no means "Dictionaries of Quotations." The extract that has been given of the article "Romance" conveys too favourable a notion of them in this respect; for the article being an elaborate one, some quotations are inserted; and this is the exception, not the rule. Great would be our regret if a work of the nature of a Lexicon, however well executed and however useful, should ever succeed in banishing from our bookcases, by the substitution of itself, a Dictionary on the model of Johnson or Richardson, teaching by example as well as precept, furnishing, by its array of well-chosen quotations, a miniature series of "elegant extracts," and, instead of fatiguing us with scanty notices of uninteresting strangers, enlivening us with anecdotes of the words and phrases most familiar to our lips. Nathan Bailey justly characterized his array of "Cuts" as giving a "clearer Idea of Figures not so well apprehended by verbal Description"; and what he did for figures by his five hundred cuts was done for ideas less tangible by Johnson's fifty thousand quotations. It would be a serious loss for literature if this method of illustration, no less pleasant than profitable, were ever allowed to fade away and be forgotten.

We must not omit to mention that in addition to the main body of matter, the volumes before us contain a variety of auxiliary information which has a separate value. In both, we have Tables of scriptural, classical and geographical Names, and a pronouncing Vocabulary of Proper Names of distinguished individuals of modern times. In Webster we have, also, an extensive list of Synonymes, and in Worcester, a History of English Lexicography, a Catalogue of English Dictionaries, Observations on "Archaisms, Provincialisms and Americanisms," &c. Throughout the whole of both, much attention is paid to questions of pronunciation, with such effect as to rectify, in many cases, the statements made by Walker, even with regard to English usage.

To conclude, the volumes before us show a vast amount of diligence; but with Webster it is diligence in combination with fancifulness; with Worcester in combination with good sense and judgment. Worcester's is the soberer and the safer book, and may be pronounced the best existing English "Lexicon."

Great Expectations. By Charles Dickens. 3 vols. (Chapman & Hall.)

WHETHER the library of English fiction contains a romance comparable with 'Great Expectations' is a matter which admits of doubt—because with the breathless interest of a tale of mystery and adventure, with descriptions in which familiar and tame scenery is wrought up so as to

exceed in picturesqueness the Apennine landscapes of a Radcliffe, or the deep-sea storms of a Fenimore Cooper, are combined such variety of humour, such deep and tender knowledge of the secrets of a yearning human heart, as belong to a novel of the highest order. Grant the two leading inventions of the tale as romantic, but not impossible; grant a certain exaggeration, so artfully distributed over the whole work as to amount to nothing more than a high tone of colour, and 'Great Expectations' can be charged with only one fault;—that of being too short. It stands the test of collection, too, as few tales published in its fragmentary fashion can. Every week almost, as it came out, we were artfully stopped at some juncture which made Suspense count the days till the next number appeared,—again to be baulked, and anew to count.—Yet, on reading through the romance as a whole, there is no feeling of shock or spasm, still less any impression of "dropped stitches," but a sense that we have to do with a work of Art arranged from the first moment of conception with power, progress, and a minuteness consistent with the widest apparent freedom. Trying Mr. Dickens by himself, we find in this his last tale as much force as in the most forcible portions of 'Oliver Twist,'—as much delicacy as in the most delicate passages of 'David Copperfield,'—as much quaint humour as in 'Pickwick.' In short, that this is the creation of a great artist in his prime we have felt from the very first moment of its appearance, and can deliberately sign and seal the conviction, even though the catastrophe is before us, and though we have been just devouring the solution of 'Great Expectations.'

It is not lost time, neither a case of "painting the lily," to insist on certain details and characteristics of a tale already in thousands of hands.—No scenery could be imagined less romantic than the marshes in which the romance begins and ends; the soaking flat country, with its pollards,—with its "broads," in the furthest of which lie moored the convict hulks, the old churchyard on the verge of this district, the sluices, and the limekiln.—But out of such common materials a Cuyper, or a Ruysdael, or a Hobbina makes a poetical landscape; and so with his pen does Mr. Dickens. The scene holds the reader from the first; the boy, born to be tormented by his "great expectations," is as much a dreamer, in right of his natural surroundings, as if he had been born at the feet of the Jungfrau, or bred in that Paradise of heaven, earth and sea, "the Golden Shell" of Palermo.—That Nature has influences apart from her sublimities, and that these speak to all who have ears to hear, is told with the decision of a key-note clearly touched, in the very first lines of this strong story. The return to the key, from time to time, is masterly, in the fullest sense of the word, because never monotonous.

The hero of the tale,—a dreaming, ambitious boy, with a grain of genius in him, and flung out by Fate into a narrow and cramping existence, which in no respect contents his yearnings,—may interest few people; and yet he is true to a life with which many have struggled, and to dreams which have put right, or put wrong, many a better man than himself. His shrewish guardian sister, with her perpetual apron (a household ephod of self-defence and assertion), and her sycophants, may be, we trust, more shrewish than are the sisters of many child-dreamers; but how admirably is her bitterness and vulgarity (fed by parasites) balanced by the sweet, truthful nature of Joe, with his dull wits and his meandering speech, and his huge hands like two forge hammers, and his

tender, loving heart. If we take the following scene of his farewell appearance in the story, it is not because it is the best in which he figures,—but because his discourse on the expediency of offering a present of blacksmith work to Miss Havisham—his visit to the thankless boy in London in the hour of his prosperity—above all, the scene of his wife's burial (which is like one of Hogarth's best pictures put into writing), have already been got by heart by thousands on thousands of readers. What is offered will enlighten some by a few days in advance. Pip's "great expectations" have landed him in a violent fever—and the faithful, neglected friend tends him as under:—

"Joe's eyes were red when I next found him beside me; but, I was holding his hand, and we both felt happy. 'How long, dear Joe?'—'Which you meantersay, Pip, how long have your illness lasted, dear old chap?'—'Yes, Joe.'—'It's the end of May, Pip. To-morrow is the first of June.'—'And have you been here all the time, dear Joe?'—'Pretty nigh, old chap. For, as I says to Biddy when the news of your being ill were brought by letter, which it were brought by the post and being formerly single he is now married though underpaid for a deal of walking and shoe-leather, but wealth were not a object on his part, and marriage were the great wish of his hart.'—'It is so delightful to hear you, Joe! But I interrupt you in what you said to Biddy.'—'Which it were,' said Joe, 'that how you might be amongst strangers, and that how you and me having been ever friends, a visit at such a moment might not prove unacceptable. And Biddy, her word were, "Go to him, without loss of time."—That,' said Joe, summing up with his judicial air, 'were the word of Biddy. "Go to him," Biddy say, "without loss of time." In short, I shouldn't greatly deceive you,' Joe added, after a little grave reflection, 'if I represented to you that the word of that young woman were, "without a minute's loss of time." There Joe cut himself short, and informed me that I was to be talked to in great moderation, and that I was to take a little nourishment at stated frequent times, whether I felt inclined for it or not, and that I was to submit myself to all his orders. So, I kissed his hand, and lay quiet, while he proceeded to indite a note to Biddy, with my love in it. Evidently, Biddy had taught Joe to write. As I lay in bed looking at him, it made me, in my weak state, cry again with pleasure to see the pride with which he set about his letter. My bedstead, divested of its curtains, had been removed, with me upon it, into the sitting-room, as the airiest and largest, and the carpet had been taken away, and the room kept always fresh and wholesome night and day. At my own writing-table, pushed into a corner and cumbered with little bottles, Joe now sat down to his great work, first choosing a pen from the pen-tray as if it were a chest of large tools, and tucking up his sleeves as if he were going to wield a crowbar or sledge-hammer. It was necessary for Joe to hold on heavily to the table with his left elbow, and to get his right leg well out behind him, before he could begin, and when he did begin, he made every down-stroke so slowly that it might have been six feet long, while at every up-stroke I could hear his pen spluttering extensively. He had a curious idea that the inkstand was on the side of him where it was not, and constantly dipped his pen into space, and seemed quite satisfied with the result. Occasionally, he was tripped up by some orthographical stumbling-block, but on the whole he got on very well indeed, and when he had signed his name, and had removed a finishing blot from the paper to the crown of his head with his two forefingers, he got up and hovered about the table, trying the effect of his performance from various points of view as it lay there, with unbounded satisfaction. Not to make Joe uneasy by talking too much, even if I had been able to talk much, I deferred asking him about Miss Havisham until next day. He shook his head when I then asked him if she had recovered. 'Is she dead, Joe?'—'Why you see, old chap,' said Joe, in a tone of

remonstrance, and by way of getting at it by degrees, 'I wouldn't go so far as to say that, for that's a deal to say; but she ain't'—'Living, Joe!'—'That's nigher where it is,' said Joe; 'she ain't living.'—'Did she linger long, Joe?'—'Arter you was took ill, pretty much about what you might call (if you was put to it) a week,' said Joe; still determined, on my account, to come at everything by degrees.—'Dear Joe, have you heard what becomes of her property?'—'Well, old chap,' said Joe, 'it do appear that she had settled the most of it, which I meantersay tied it up, on Miss Estella. But she had wrote out a little oodleshell in her own hand a day or two afore the accident, leaving a cool four thousand to Mr. Matthew Pocket. And why, do you suppose, above all things, Pip, she left that cool four thousand unto him? "Because of Pip's account of him the said Matthew." I am told by Biddy, that air the writing,' said Joe, repeating the legal turn as if it did him infinite good, "account of him the said Matthew." And a cool four thousand, Pip!' I never discovered from whom Joe derived the conventional temperature of the four thousand pounds, but it appeared to make the sum of money more to him, and he had a manifest relish in insisting on its being cool. This account gave me great joy, as it perfected the only good thing I had done. I asked Joe whether he had heard if any of the other relations had any legacies?—'Miss Sarah,' said Joe, 'she have twenty-five pound perannum fur to buy pills, on account of being bilious. Miss Georgiana, she have twenty pound down. Mrs. ——— what's the name of them wild beasts with humps, old chap?'—'Camels!' said I, wondering why he could possibly want to know. Joe nodded. 'Mrs. Camels,' by which I presently understood he meant Camilla, 'she have five pound fur to buy rushlights to put her in spirits when she wake up in the night.' The accuracy of these recitals was sufficiently obvious to me, to give me great confidence in Joe's information. 'And now,' said Joe, 'you ain't that strong yet, old chap, that you can take in more nor one additional shovel-full to-day. Old Orlick he's been a bustin' open a dwelling-ouse.'—'Whose?' said I.—'Not, I grant you, but what his manners is given to blusterous,' said Joe, apologetically; 'still, a Englishman's ouse is his Castle, and castles must not be busted 'cept when done in war time. And wotsume'er the failings on his part, he were a corn and seedman in his hart.'—'Is it Pumblechook's house that has been broken into, then?'—'That's it, Pip,' said Joe; 'and they took his till, and they took his cash-box, and they drank his wine, and they partook of his wittles, and they slapped his face, and they pulled his nose, and they tied him up to his bedpost, and they giv' him a dozen, and they stuffed his mouth full of flowering annuals to prevent his crying out. But he knowed Orlick, and Orlick's in the county jail.'"

Most admirable is the manner in which the plot of the tale winds round the wretched hunted jail-bird. Those who from the first understood the delusion of the boy's great expectations,—who felt or saw that they had nothing to do with the ghastly recluse in the deserted house, and her brooding revengeful sense of the wicked wrong which had laid her woman's life waste—were, therefore, all the more terribly held in thrall by the knowledge that the convict would return some day, and the air-castle be blown into fragments as by a whirlwind.—It is much to say, that the suspense so strongly excited is followed by a catastrophe as fearfully and forcibly outdoing expectation as if it had not been foreseen. There is nothing in English fiction, not even "the print of the man's foot in the sand" in 'Robinson Crusoe,' fuller of engrossing and legitimate terror than the night scene of the convict's return, dogged from its first moment by Death.—From this point to its close, the interest of the romance increases with a resistless and steady power never before attained by Mr. Dickens. Nor has he ever used his own language with such poignant muscular force as here. Not an epithet is lost; not a touch is

laid on carelessly; not a sentence is mannered. Adventure follows adventure—each one more riveting than the last—each one, too, adding some softening and redeeming light to the character of the poor hunted “warmint,” without making the close of his sad story maudlin or sentimental. • Everything is as it should be, great and small;—from the tremendous murder-scene in the limekiln down to Wemmick’s lamentation over “the portable property.”

There are those who will say that Miss Havisham’s strange mad life is overdrawn; but such have not been conversant with the freaks and eccentricities which a haughty spirit in agony can assume: nor the manner in which a resolution once taken becomes a law never to be broken. We have no doubt, that, even now, in remote places of England, rich old mansions might be found as strangely peopled as the deserted brewery—with its spectre in white. Satis House, with its dank and weed-grown garden and the mouldering bridal feast, is as real, to us, as the lonely church on the marshes,—or as the wonderful estate in Walworth, with its works of art and ingenuity—the original of which, by the way, we have heard claimed for half-a-dozen different localities.

One word more. In no late fiction has Mr. Dickens been so happy in his group of what may be called accessory characters. Mr. Jaggers, with his handkerchief; Mr. Wopsle, with his dramatic instincts,—the greedy, sycophantish seedsman,—that wonderful thorn in everyone’s side, Trabb’s boy—are all capital. We fancy that at the outset he may have meant to make more of Mr. and Mrs. Matthew Pocket,—but they are not missed—Herbert is as fresh and genial an *Horatio* as a hero could desire; and most particularly are we grateful for the uncertainty in which the tale closes, as we interpret it. We do not believe that Pip did marry Estella, though there are two opinions on the subject.

We part from this tale with as much reluctance as if we had never before known the dear delight of reading a romance. So strong a sensation of pleasure is too rarely received in this wilderness of dubious literature of ours. ‘Great Expectations,’ we are satisfied, will add to Mr. Dickens’s reputation, and is the imaginative book of the year.

Henry IV. and Marie de Medici. Part II. of *The History of the Reign of Henry IV. King of France and Navarre.* By Martha Walker Freer. 2 vols. (Hurst and Blackett.)

AMONG the earliest acts of Henry the Fourth, after he had re-assembled the splendid court of his predecessor, third of the name, were those of homage to the beauty of Gabrielle. He first presented to her not only the Hôtel Schomberg, but also the revenues of St. Cornouaille de Compiègne, a benefice appertaining to his wife. The lady carried matters with a high hand at the Louvre. The king carried them, of course, still higher, especially towards the Jesuits, who held part of the regalia, a ruby, two sapphires, and eight large emeralds. Miss Freer suggests no favourable view of his character at this epoch. He was losing the manly good humour which made him popular at Navarre, and became particularly surly towards his political secretaries. “One,” he said, “is a boaster, the other is a fool, and the third is a thief.” Very likely. The names of Forget, the Sieur de Beaulieu, and Louis Potier are not totally unknown. Meanwhile, when Villeroy took the place of Revol, great was the storm, and Diana of France declared that the king had appointed a regicide to be his minister. D’O, again, insulted every one by his gluttony, and “ran through” four millions sterling with artistic ease. Such were

the little vexations accompanying the commencement of the new reign. The demands of the Reformed Church and the menaces of foreign powers were comparatively trifling. Gabrielle atoned for them all, and when she appeared at a ballet so sumptuously arrayed that she “could scarcely stand from the weight of stars and jewels with which she was adorned,” what would ten wars have been to Henry of Navarre? She was reclining, just then, upon the crown of the golden lilies to be worn upon her own pretty, insolent, and graceless head. But the king’s troubles were beginning in earnest. The ghost of Pierre Barrière arose in the person of Jean Châtel, the clothier’s son, who stabbed His heretical Majesty through the upper lip. “Since I have entered Paris,” he exclaimed, “I have heard of nothing but murderous schemes against my life.” He soon heard of invasions and revolts; but they troubled him little. It was a signal relief from ordinary anxieties to win the battle of Fontaine-Française. Henry could be softer than a woman in his palace; on the field, he tilted with bloody lance through rank after rank of enemies. Miss Freer is somewhat lavish of detail in this part of her narrative, and expatiates much upon wardrobe treasures and other topics, which would certainly have wearied the monarch himself, to judge by his demeanour at Amiens:—

“The king arrived on the 16th of October, 1595, fatigued, and not in the mood to listen to the tedious harangue which it was then the fashion to inflict on monarchs when they entered a town. The municipality were, however, at the gate waiting with their oration. The provost advanced, and commenced, ‘King! most mighty, clement, benign!’—‘Stop!’ cried his majesty, ‘those titles suffice; add only, “and very weary!”’ The authorities, not taking the hint, prosed through their harangue, and then escorted the king to his abode. A repast stood ready, and Henry was about to sit down to table, when a second deputation entered to bid his majesty welcome. ‘Sire,’ commenced the spokesman of the new comers, ‘Agesilaus, king of Lacedæmon—’ ‘*Ventre St. Gris!*’ exclaimed his majesty, whose irritation and hunger had become irrepressible, ‘*j’ai bien ouï parler de cet Agesilaus; mais il avoit diné, et je n’ai pas diné moi!*’”

Better for him a feast of peaches; he cared more for them than for municipal flatteries. Better still the pettings of Gabrielle d’Estrées; but, in spite of both, there were drawbacks to the royal felicity. Writing, in 1596, he complains, “I have not a charger that I could ride in battle; my armour is incomplete; my shirts are ragged; my doublets out at elbow; my camp kitchen is worn out, so that every two days I am obliged to dine with my officers.” Yet, the great lords lived daintily, and the favourite did not want for gems. At the same time, or rather later, Queen Marguerite was pledging her jewels to the Republic of Venice, and humbling herself most ignobly to the King’s mistress, to procure aid in her pecuniary troubles. Nevertheless, when occasions for excess occurred, there never seemed any stint of money:—

“Henry participated, with much apparent joyousness, in the diversions of the carnival of 1597. Indeed, his majesty’s pastimes recalled the riotous forays of Henry the Third and his *mignons* in the streets of Paris. The king, accompanied by Madame la Marquise, and by a great company of cavaliers, perambulated the streets in disguise, and entered unexpectedly the houses of several distinguished citizens. No violence was committed, however, as in olden times; when the frolics of the courtiers were anything rather than pastimes to the unfortunate householder doomed to such visitation. The king was invariably unmasked by the fair hand of la Marquise on entering a mansion. Henry was not, however, strictly orthodox

in his frolics. On the first Sunday in Lent the king, to the extreme scandal of the legate, organized a procession of ‘sorcerers,’ which his majesty joined, disguised by a long beard, and his apparel adorned with various diabolical emblems. Thus attired, the king showed himself in the streets, and ended the frolic by a revel at the hôtel of Zamet. An entertainment of the most superb description was also in preparation, to be given by the constable de Montmorency, to celebrate the baptism of his son and heir, whom the king was to present at the fût as sponsor. The hôtel de Montmorency, the abode of Madame de Montpensier during the days of the League, now cleansed from its democratic pollutions, was magnificently refurnished and decorated for the occasion. Eight days previous to the *fête*, all the cooks and confectioners of Paris were pressed into the service of the Montmorency. Money was lavishly supplied to purchase rarities for the banquet. Envoys were despatched to London, Madrid, and to Naples, to buy rare viands, flowers and fruits. Two sturgeons were purchased for 100 crowns each; 350 crowns were spent on fruit; and as many *poires de bon Chrétien* bought as could be found, at the price of a crown each pear.”

It was not enough for Gabrielle that she should be the acknowledged favourite. She insisted upon being drawn in a gilded car through the park of Monceaux, attended by the King and a train of bare-headed courtiers: “The king, to familiarize the people with the extraordinary honour paid to her, conversed with Gabrielle publicly, and was often seen to kiss her hand.”

In the camp the great banner of the lilies waved above her tent. But she was not queen. Her own ambition and Henry’s idolatry were not yet satisfied. He wanted to divorce Marguerite; but how to let out the secret of his next marriage project? He would not refuse the Infanta of Spain; he might accept Arabella of England; the sisters of Prince Maurice were Huguenots, though daughters of a nun; the young Duchess of Florence was beautiful, but, eighty years previously, her ancestors had been burghers; as for the German Princesses, “I do not fancy any one of them, and would always imagine that I had a skin of wine by my side.” He went on, “I should prefer a flirting wife to an ill-tempered one,” which was a point in his character:—

“In the plenitude of his victories and his power, Henry imagined that his will could elevate Gabrielle d’Estrées to the throne; and, blinded by her ambition, the duchess used the unbounded influence which she possessed over the king to strengthen this determination. The careless indifference with which the rumours, long pervading the court, had been treated, fatally deluded Madame de Beaufort: the project, however, was not credited—or, at any rate, it was deemed more politic to wait until facts confirmed the reports, before opposition was manifested. Yet the manner of Gabrielle’s friends and adherents, when the secret was intrusted to them, might have warned the duchess. Cheverney suggested delay and circumspection; Sancy, by the bitterness of the censure which his impetuous nature could not repress, had forfeited at once the favour of the duchess; Roquelaure incurred temporary disgrace by the obscene jest he thereupon uttered in the presence of Angélique d’Estrées, abbess of Maubuisson, and which the latter repeated to her sister. Du Perron penned verses in which his semi-satirical allusions while lauding the future royal state of the favourite, rendered Madame de Beaufort doubtful whether to frown or to commend. The duke de Mayenne, with his phlegmatic though positive temper, did much to encourage the hopes of the duchess; but Mayenne had a place to win at court; an influence to establish in the council; wealthy alliances to negotiate for his daughters—in all which the promised aid of Madame Gabrielle was, in fact, the accomplishment of the duke’s designs. Queen Marguerite faithfully interpreted the sentiment of Henry’s courtiers, when she averred that the

nobles and ladies of France would rather incline before herself, all sullied and ruined as was her repute, than accept the sovereignty of Gabrielle d'Éstrées. Unhappily, the duchess heeded not the indications of the coming storm: she forgot that there were those at court—men of strong political passions, inured in crime—who would remorselessly strike to the ground her loveliness and grace, like any noxious thing fatal to the glory of their royal master, or to the welfare of his realm."

The grand-daughter of Louis the Twelfth was lady of honour to this imperious beauty; but there were limits to her exaltation. Marguerite was not unwilling to be divorced, provided that Gabrielle did not succeed her. No wonder that the Duchess was taken ill; the marvel is, that she had not long before been touched. During a religious festival early in 1599,—

"A fine citron was brought by her host in person, which was eagerly accepted by the duchess. She had no sooner partaken of the fruit than Gabrielle complained of a sensation of heat in the throat, and of spasms in the stomach. The duchess retired to her chamber, and was under the hands of her women when M^{lle}. de Guise arrived. 'I found la Duchesse,' relates she, 'attended by her women, who were undressing her: she complained to me of violent head-ache. A few minutes elapsed when she fell forwards, her limbs at the same time being convulsed.' On recovering, the unfortunate duchess, with tears, uttered the word 'poison,' and declared that she had been assassinated. She rose, and insisted immediately on leaving the abode of Zamet, for the house of her aunt Madame de Sourdis, in the Cloître St. Germain, with the intent, on the following day, of removing to the Louvre. Whilst her litter was being prepared, the duchess sat down and wrote to the king. When so employed a letter was presented to her from his majesty, which had just arrived by express. Gabrielle eagerly opened the missive; but whilst she was perusing it her face was observed to become slightly suffused, and the next moment she fell into a second syncope. The duchess, on her partial recovery from this seizure, was carried to her litter, and transported to the house of Madame de Sourdis, on her own peremptory bidding. From thence she despatched a messenger to summon her aunt. The night passed in anguish—sickness and convulsions returned; but, subsiding towards morning, were succeeded by an interval of repose, which gave her attendants hope. The next day, however, the sufferings of the duchess were excessive: fainting fits and convulsions continued without abatement. The doctors summoned gazed on in helpless wonder."

In April, all her visions were over, and she was dead. Mezerai says that the devil killed her; others allege that it was M. de Sancy. Aubigny is the only contemporary writer who speaks boldly of poison:—

"Not the slightest record of the autopsy is extant—but great trouble was taken to allay the suspicion of poison."

No one ever knew what the King really thought upon the subject. It was clear, however, that many were interested in Gabrielle's death:—

"The satisfaction of the princes of the blood may be illustrated by the conduct of their chief, the young Condé. When the intelligence first reached St. Germain, Madame de Condé entered the apartment, and seeing her son sitting apart in a corner, his face partly covered with his mantle, *et faisant le dolent*, asked what ailed him? For some time the prince kept his woful countenance, and, shaking his head, refused to answer. At length, on being pressed by his mother, Condé burst into a fit of laughter, and rising, exclaimed joyously, '*Madame! la Duchesse est morte!*'"

After losing Gabrielle, Henri seemed to lose much that was estimable in his character.

In 1600, Marie de Medici comes upon the scene, to the confusion of all the Henriettes in France. The King sent her a chain of emeralds, and she sent the King a horse, which was a

pleasant variety in love-making. At the Church of S. Lorenzo in Florence the marriage was celebrated, amid ecstasy and displays of splendour. But we draw upon Miss Freer's narrative for only one more sketch; it is the execution of Biron:—

"Five o'clock, the hour fixed for the execution of Biron, at length gloomily tolled—and as the last stroke of the great clock of the Bastille sounded, M. de Rumigny, M. de Vitry captain of the royal guards, and the lieutenant of Montigny governor of Paris, followed by a company of soldiers, entered the chapel. 'Monsieur,' said one of these personages, 'it is time now to descend with us, that you may ascend to God!' The duke stepped forward with dignity and declared himself ready to follow them. He wore a suit of grey satin, a cloak of black velvet, and carried a hat adorned with white and black plumes. On the green before the Bastille a scaffold had been erected five feet high: it was undraped, and approached by rough steps. Around troops were drawn up in close rank; while strong bodies of arquebusiers occupied the green under arms. The chapel bells tolled mournfully; while many prisoners and officials watched the advance of the procession, shedding tears for the approaching miserable fate of so valiant and popular a nobleman. The duke was received, close to the scaffold, by the provost of the high court, who was on horseback, bearing in his hand his wand. On the scaffold stood the executioner and his assistants, the notary of the high court, and the curé de St. Nicholas. As Biron gazed on these ghastly preparations his fortitude forsook him. He, however, knelt at the foot of the ladder, and thus received final absolution. On rising, the eyes of the unfortunate man wandered wildly round. 'Oh!' exclaimed he, pointing to the companies of musketeers—'Oh! for a musket-ball through my body! Is there no mercy?' He was then assisted to ascend the steps on to the scaffold. The warrant for execution was next produced and read by the notary Voisin; the marshal again fiercely denying that he had conspired against the life of the king. Biron then joined in prayer with the curé Magnan. A handkerchief being then given to him by the executioner, he bound it round his eyes and knelt. On hearing the swift step of the headman behind him, the marshal started from his kneeling attitude, and tearing the handkerchief from his eyes, exclaimed, 'God! is there no pardon—no mercy?' and in his agony Biron commenced repeating rapidly to himself the word, 'Minime! Minime!' which was supposed to refer to his confessor at Dijon, a monk of the order of Minimes; who told the marshal that if Lafin revealed that which they had, with such awful oaths, sworn to keep secret, the fate of the former would be eternal perdition, and that of Biron salvation. Anxious to terminate so harrowing a spectacle, the authorities present conferred together, and calling the executioner, authorized him to bind the criminal, to cut the collar of his doublet, and to force him into the requisite posture to receive the stroke—the former being preliminaries usually adopted, but which, in the case of the marshal, had, at his own earnest prayer, been dispensed with. The face of Biron, however, glared with fury at the approach of the headman and his assistants: for the terror and excitement of his position were evidently fast depriving him of reason. 'Ah! who dares approach me?' said he. 'A finger shall not be laid on my person! or I swear I will strangle every person present!' After an interval of silence, the marshal called to M. Barenton, the officer to whom he had intrusted his message to Rosny, and, with a face still vividly suffused, requested him to bind his eyes. Barenton complied; but the duke again snatched the handkerchief from his brow, exclaiming, 'Heaven! let me gaze on the sky once more!' When the handkerchief was re-adjusted, Biron called impetuously to the headman, 'Haste! haste!' In a second the sword of the executioner was poised, and just as the unhappy marshal was again rising, the blow fell, and the head rebounded from the scaffold, and dropped into the midst of the horrified spectators. The body was immediately covered with a pall of black cloth: the same evening, at

dusk hour, it was placed in a leaden coffin, and at midnight interred in a vault constructed in the nave of the parish church of St. Paul."

We have principally noticed incidents bearing on the personal life and character of Henry the Fourth; but Miss Freer is diffuse upon political and military events, which she arrays in appropriate order, and treats with animation and intelligence.

The History and Antiquities of the Parish of Blyth, in the Counties of Nottingham and York. With Introduction, Notes, and Appendix of Documents. By the Rev. John Raine, M.A. (Nichols & Sons.)

THE name of Raine is one well esteemed by those who take interest in local histories, and we find pleasure in asserting that the reputation of Dr. Raine, the historian of North Durham, suffers no disparagement when his peculiar work is taken up by his brother. The latter does not select for his subject half of one county, but a single parish lying in two counties. He writes like a scholar, yet sometimes errs, as even scholars must do occasionally. He deals with monastery, chapel and hospital, castle and honour, ancient families and their possessions, biographical notices, antiquarian lore of a miscellaneous sort, and details of natural history, which give a value to his book which does not often distinguish topographical volumes like the present. That he can treat these details picturesquely let the following passage demonstrate:—

"Our mountains are only hills of red sand, and our rivers are small and sluggish streams; and yet nature has left behind her some characters which will amply repay our study and investigation. Whoever will take his station upon the hills near Styrrup, or Everton, or Gringley, will at once perceive that the whole of the level ground now known by the names of Gringley, Everton, Misson, and Styrrup Cars—the latter extending through the lands of Tickhill, Stancil, and Hesley, to Rossington and Doncaster—has at one time been covered with water, which, divided by the high grounds of Plumtre, Bawtry, Martin, and Shooter's Hill, has to the north-east of Rossington Bridge formed one immense lake or estuary, covering the localities where now stand Haxey, Thorne, and Hatfield, and, as we may reasonably conjecture, communicating with the Humber or the sea. The soil of these cars is all essentially of the same character—black bog, and is filled with trees, generally speaking pine, oak, and yew, which have evidently stood very thick on the ground, and, having fallen off at the base, and leaving their roots *in situ*, are buried about a foot deep, although in some instances much deeper. They have fallen in every direction. Wherever any unusually large tree has been successfully exhumed, its trunk and limbs look like the mighty carcase of some antediluvian megatherium. The tenants of these lands are gradually reclaiming them by extirpating these old occupants of the soil, which are converted to the practical purpose of fuel, or the more ornamental of garden fences and gateways. It is found, however, that after one or two crops the land becomes highly pulverised, and resembles dry soot, and the farmers are obliged to change the cultivation from arable to pasture land. When undergoing the process of paring and burning, the cars have been known to ignite to the depth of six feet, and therefore proportionate care is required on such occasions. Sometimes as many as six horses are found necessary for the removal of one tree. Horses dislike all novel work; but on such occasions as these a fertile imagination would be tempted to suggest that their fears arose from apprehension that they were disinterring some mysterious creatures of a bygone age."

There is, as yet, no good county history of Nottinghamshire, but if there be many men with Mr. Raine's qualifications, willing to do for their respective deaneries or hundreds what

he has effected for the parish of which he is vicar, this want will be gradually but effectually supplied. From the days of De Builli the Norman, the original Norman proprietor and founder of the monastery, down to the Lumleys, who now hold De Builli's old castleground of Tickhill, sub-letting the modern residence thereon to a man of war, like its first Norman lord, Capt. Bower, the author renders elaborate account of all the more important incidents connected with the parish. There, Queen Eleanor enjoyed many a queenly privilege; and there, was part of the dowry of that pretty Mary Hewet who brought greatness with her to the House of Osborne. Mary was the Clothworker's daughter whom her father's apprentice, Edward Osborne, gallantly saved from drowning, when she fell out of a window of the paternal residence on London Bridge into the Thames. The heart of the young girl became tenderly affected towards the brave and handsome lad who had rescued her from death. Shrewsbury's Earl wooed the citizen's daughter, but her father, then Lord Mayor, put her hand into that of his late apprentice, and therewith a dowry which would have exceedingly well graced a Countess of Shrewsbury. But she was to be the mother of greater than Countesses. The Osbornes passed from city to court, and the representatives of the dashing young clothworker are now to be found in the Duke of Leeds and in the Baron Osborne.

The Priors of Blyth had their own gallows to hang other folk from, a privilege which they often exercised. Among other incidents, we meet with a prior surrendering his office, but who "is allowed by the ordinary, for meat and drink, as much as two monks"—which indicates no great infirmity of appetite or digestion in the outgoing official. For the old times when these transactions took place, Mr. Raine seems to have more than an antiquary's affection, and he does not even hesitate to say that "sieges conducted in person by the bishops of their church" were "transactions which made the very heart of England to beat with a quicker pulse,"—perhaps so, quickened by the conviction that the prelates might have been better employed.

If our Vicar has much in him of the affectionate zeal of the antiquary, he combines therewith a very excellent appreciation of modern pleasures and privileges. For instance:

"The vicar of Blyth it appears has the right of hunting through the parish. My noble neighbour, and, if I may be permitted to call him so, friend, the lord of Serlby, now takes my domain as part of his country: and I have no wish to disturb one who is so much and so deservedly respected and beloved in this as indeed in every other field of duty. An amicable and equitable adjustment of our respective claims may easily be effected by his conferring upon me the office of chaplain to the Serlby Hunt, in which situation I shall have the honour of treading, at however humble a distance, in the footsteps of many eminent ecclesiastics of ancient times, among whom ought specially to be recorded the name of the illustrious Anthony Bek, Bishop of Durham, patriarch of Jerusalem, and King of the Isle of Man, who was passionately fond of the chase, kept excellent horses and hounds, and, if he had lived in these days, would have been a most popular prelate."

Let us here remind Mr. Raine that good old hunting Anthony,—who proved himself to be the only man of pure life among the bishops who attended the translation of the bones of St. William of York—the prelates were all afraid to touch them, save Anthony,—was not King of Man. He simply enjoyed the privileges of principality, which he held by permission of the English sovereign. This prelate proves the late Duke of Wellington to have been a

plagiarist. Often has the Duke's *original* assertion been quoted, that "when a man thinks of turning in bed, it is time for him to get up." Anthony Bek said the same thing long before the Duke, "Dixit illum non esse hominem qui in lecto de latere in latus se verterit."

Reverting to modern subjects and the acuteness of perception which marks the Vicar when examining them, the following remarks on Bishop Horsley's denunciation of the policy of commuting tithes for land will be read with interest:—

"With great deference to the authority of this very eminent and able prelate, I would submit that it by no means followed that the clergy should become farmers, (for of course they might have let their glebe lands either voluntarily, or, as at present, under legal compulsion, to tenants,) or that their estates should necessarily be converted into 'huge dilapidated farms.' But now, at all events, since the commutation of tithes and the establishment of free trade in corn, it cannot I think be denied that it would be for the advantage of the clergy if their endowments consisted in land instead of rent-charges. As matters stand at this day, their benefices are dependent entirely upon the price of grain; and it has frequently happened that when corn has been low, other commodities, such as wool and cattle, have commanded high prices. And hence landlords, since the days of free trade commenced, have been enabled to let their farms at as high, nay in many cases higher, rents than before. Of course a landed benefice would share in the advantages of a landed estate."

Sometimes the Vicar is not so clear in his illustrations, as when he remarks that "the pride of ancestry is inherent in the human breast. The late Mr. O'Connell used to declare of a living statesman, that he was lineally descended from the impenitent thief." If the genealogy could have been established, does Mr. Raine conclude that the statesman in question would have been proud of the pedigree? Again, the Vicar remarks, "There is, or was, living somewhere in the midland counties, a person who claimed descent from one of the murderers of Becket, and prided himself on the connexion." One person! why there is no lack of well-known descendants of De Morville and his fellows, whose representatives have no reason to be ashamed of their descent, however stoutly they may be disposed to denounce the crime of their respective ancestors. Nothing is more completely exploded than the old fable, which told of the speedy death at Jerusalem of all those men, described as being lone and childless. Not only did De Morville live in very excellent style at Kirk Oswald, in the reign of King John, but his two daughters married as became their rank. From Ada, the younger of these, who had two husbands, De Lacy, Lord of Egremont, and Lord de Multon, of Gillesland, there are many descendants. By the first marriage, the descendants are to be met with in the Fitzwalters, Haringtons, and Lucys, who are the posterity of the three sisters of the last Lord de Multon, of Egremont, who died in 1334, leaving his title in abeyance among those heirs to this very day.

The second marriage of De Morville's daughter, that with Lord Multon, of Gillesland, has left other inheritors of the blood of one who spilt the archbishop's. Ada's great-great-grandson, Thomas, left an only child—Margaret, who was carried off, and married by Ralph, first Lord Dacre. He not only obtained a charming wife in the lady, but the fair barony of Multon of Gillesland, which is at this time vested in the present, the twenty-second, Baron Dacre, and the sole heir of the ancient barony of Multon of Gillesland.

It would, perhaps, be more difficult to trace the progeny of the hunchbacked son of the other criminal, De Traci; but the heirs of the three sisters of the last Fitz Ranulph might, probably, be traced if some little care were given to the search. Fitz Ranulph, it will be remembered, took no active part in the fatal fray. The family of Fitz Urse were settled in Ireland, and assumed the name of M'Mahon. It is probable that a descendant of the murderer of the archbishop would be found in the Duke of Magenta, Marshal M'Mahon. Of Brito's descendants we acknowledge our ignorance, but as the others are accounted for, we may fairly conclude that these were of the Gloucestershire families, of whom Spelman speaks as being connected with one of the assassins, in dreadful memorial of which circumstance they never went abroad without having the wind in their faces!

Mr. Raine's allusions to the possible descendants of men who clearly never *intended* to murder, but only to arrest à Becket, occur in the description of the division of Bilby. In the same chapter he speaks of the Vanes, who were landholders in the parish, and adds,—*"The Vanes were originally a Kentish family, and purchased the confiscated estates of Ralph Neville, Earl of Westmoreland, in the county of Durham, in the beginning of the seventeenth century."* There is here an error in name. The last of the four Ralph Nevilles died in 1549; and none of them had been disturbed in the possession of his inheritance. The fourth was succeeded by Henry, and *he* by Charles, who was attainted in 1570, when all his honours were forfeited;—the penalty for his share in the attempt in favour of Mary Stuart.

Gilbert Vane, who established himself at Bilby, was the second Lord Barnard, and father of that too famous Anne Vane, who was content to enjoy the infamy of the protection of Frederick Prince of Wales; and on whose story Smollett founded his *'Memoirs of a Lady of Quality.'*

The family histories in this volume, although necessarily but sketches, comprise a large amount of useful information, and are made, by the historian's art, to point many a moral. They are accompanied by carefully compiled pedigrees, and form, to general readers at least, the most attractive portion of the volume. They afford, however, less matter for extract than the details connected with the law and custom of names. Mr. Raine, after deriving the name Olcotes from *Hullcote*, the sty for swine, proceeds:—

"This *a priori* hypothesis is converted into certainty by reference to such names as Swinburn, Swindon, Swindell, Sugden, Sowerby, Swinnerton, and others. Dr. Leo observes, 'that an estate is hardly registered as complete in the Anglo-Saxon charters without including one or more hog woods.' The addition of *cote* or *cotes* at the end of the name *Olcotes* forms no fatal objection to this etymology, inasmuch as a second word is perpetually added to explain the first in our local names—e.g. in Skelbrook, *Skel* meaning precisely what *brook* means, and again in our own district in Blyth Law Hill, where the second word Hill is simply a repetition of *Law*, which is of equivalent import; and at a more remote distance from us, in Lancashire, in the name of Pendle Hill, where *hill* has been added in explanation, or perhaps in ignorance of the original *Pen*, which has the same signification, and which we find in Penrith, Penrhyn, and in the Pennine and Apennine mountains."

An allusion to the place named Bassettlaw is backed up by a note containing some interesting information in reference to our new and decaying Houses of Parliament:—

"It is known to most of my readers that from the quarries of the Duke of Leeds and of Charles

Wright, Esq., adjoining the village of North Austan, in the west riding of the county of York, and touching each other, was obtained the stone with which the new Houses of Parliament were built, and that it is beginning to perish. Mr. Wright gave me recently, on the spot, the following explanation of this fact. In the first place the contractors took stone from quarries of the Duke which was visibly unsound and of inferior quality, although soft to work. 2. They won stone too near the *basset-edge*—to use Mr. Wright's own expression—that is, they won it from the surface forwards, driving, so to speak, the quarry before them, instead of working deep from the first: and 3. The quarries of the Duke were, in several instances, marked by fissures which had become filled with soil, and the consequence was, that the stone in contact with these fissures was soft and bad. Mr. Wright's quarries were deep, perfect, and sound, and the stone thence taken good. This explanation of a practical man, in itself interesting, will, I think, answer the purpose for which I give it, and elucidate the word *berset*, *basset*. It must mean *sloping*, and this interpretation corresponds with the actual character of our Bassetlaw."

This explanation is worthy of being remembered; but it does not tell the entire story as it may now be had by the addition of the information afforded at the recent Meeting of the Institute of British Architects. The building Commissioners accepted, as the proper material for the edifice, a specimen dolomite,—an imperishable stone, composed of lime and magnesia, rendered perfectly indestructible by its perfect crystallization. The dolomite actually used, however, was different from the crystalline sample. It was amorphous. Nature had not completed her work in it. The combination being imperfect, crystallization had not ensued, and thence have we a Palace of Westminster, the river frontage of which is slowly crumbling away into the Thames. From the Institute, we learn, that the material supplied was not, in all instances, according to sample; and in Mr. Raine's volume we are informed how and where the two different qualities of stone were taken from the respective quarries.

We close the volume with grateful feelings towards a man whose patience, research and industry, whose affection for old things, sympathy with new, and earnestness in all, may be traced in every page, from the Introduction to the Appendix.

Præfationes et Epistolæ Editionibus Principibus Auctorum Veterum Præpositæ. Curante Beriah Botfield, A.M. (Cantabrigiæ, e prelo Academico.)

As the accumulation of literature goes on, there arises a question of very great interest. An immense number of old books contain each its something of lasting value, mixed up with much which must needs fall into oblivion and drag the rest with it. How are we to provide for the preservation of the portions which ought to be preserved? One answer is, Collect the desirable parts, and publish them together, subject by subject; and the three difficulties are,—first, who is to decide upon the selection; secondly, who is to take the trouble; thirdly, who is to bear the expense?

There is one case in which the selection makes itself. When the *permanencies*, as we may call them, consist in the parts which are peculiar to old editions the text of which is no longer wanted, we know of course that we have to collect prefaces and comments. When there are no comments, as usually happens in the oldest editions of great works, there remains only the preface. In the case of the Greek and Latin classics, the prefaces of the original or *principes* editions are of a very peculiar interest. They are indispensable parts of the literature

history of their time; they are often the only personal remains of scholars who were the Scaligers and the Casaubons of the period in which the materials necessary to the existence of Scaligers and Casaubons were elaborated and collected.

It has of late years been the fashion for Societies to undertake the trouble of republication, and to collect the funds by subscription. These Societies have, beyond question, been of use; but, on the whole, they have illustrated our assertion, that the mass which is destined to oblivion will drag what ought to be permanent with it, if the two things be not separated. We know how strongly the two, three, or four men,—two or three by itself may mean a dozen, but we make our stand at four,—who want the whole of a particular book will protest against the partial republication. But, while very desirous that complete reprints should exist, if possible, for those who want them,—we appeal to fact as to the reprints which are made every day. Have they any such circulation as shows that the whole will be sought by all to whom the part will be useful? We believe they have not; of nine out of ten we believe that, as the Irish arithmetician said of his contemporaries,—

Neglected and despised, they sink in shame,
To that oblivion whence, unsought, they came.

It is a bull to say that new authors *came* from the oblivion to which they are obliged to retreat; but, in our present case, the description is correct. Nevertheless, we approve of the Societies, and of their plan. It is good that the few who really want and use forgotten celebrities should be furnished with the means; and even though many of the subscribers may be brought in by nothing but the vanity of having books to show which are not to be bought,—many more are probably well aware that they are laying out money usefully for literature. And perhaps some are far-sighted enough to apprehend that the circulation among subscribers is but the dawn of their day of utility, the full light of which will shine when the inquirer who could not have afforded the subscriptions begins to find their books in the secondhand catalogues and on the higher stalls.

The Societies may republish, at pleasure and with advantage: they could hardly be trusted to select. No body will work together usefully to such an end; if perchance a committee should happen to contain the right man, the rest will combine to make him the wrong one. The task of selection requires one purpose, one judgment, one mind, and even one taste. When therefore a person of the requisite literary qualities and desires has the pecuniary means necessary to the execution of a good plan, work for which hardly any one else is armed at every point is easily cut out for him. He is the proper collector of the dispersed valuables which, though they need hardly be anything but *rara*, have become practically useless as *rarissima*.

But it does not follow that any one with money and knowledge and zeal for letters can, as of course, be a useful collector; such a person must combine singleness of purpose with multifarious judgment. The late Baron Maseres was an instance of a liberal, energetic, and well-informed reprinter; but his six bulky volumes of '*Scriptores Logarithmici*' do not fulfil the promise of their name. Though widely dispersed, and easily to be got, there is not sufficient unity of purpose in the execution. And the consequence is that those to whom one of the Baron's interlacing plans would be useful enough to demand shelf-room cannot encumber themselves with the rest. At the same time Maseres, perhaps unintentionally, hit upon a method by which, had it been seen,

his bulky volumes might have been, and may be, made to suit their purpose. It is just this: every new subject begins upon a new leaf, so that the whole can be separated into parts without the necessity of splitting the paper. This plan should be carefully considered by all who publish miscellanies of value. It should be done in all scientific Transactions, many volumes of which are ultimately cut to pieces by secondhand booksellers, to be sold as separate tracts; so that the inferior memoirs lose their heads and tails, and are sacrificed.

To return to our subject. Mr. Beriah Botfield has presented to the scholar a collection of the Prefaces of the *principes* editions of the classics. It is a work of great trouble, much cost, sound scholarship, and decided utility. It would be valuable as a work of reference, even if every scholar had all the original editions in his own library: for there are various historical inquiries in which a run through these prefaces would be desirable. But, looking at the rarity of most of the editions in question, the gift is vastly beyond a convenience: it is a collection of impossibilities made possible. There is also a Preface of the character which might be expected from an editor whose taste leads him to the compilation of such a work. This preface might itself be detached, enlarged, furnished with notes, and separately published.

The work opens with the prefaces of the oldest editions of the Old and New Testaments. The famous Mazarine Bible (*circa* 1455) has for its introduction the epistle of Jerome to Paulinus, on the history of the sacred books. The sight of it brought to our mind, by contrast, the cringing eulogy of James the First—the "Great and manifold were the blessings, most dread sovereign, . . ."—which defaces our own version. This paltry preliminary is never objected to, probably in pure contempt. There are sixty-four prefaces of the fifteenth century, seventy-six of the sixteenth, and two of the seventeenth.

When old Troughton had finished the model of an astronomical instrument he would say to his workmen "Now let us find fault with it." We should be hard put to it to find any fault with the work before us which would imply that we are seriously at variance with the editor. The nearest approach we can make is to regret that those editions of Greek writers are not included which appeared in Latin before the original text was published. But we shall not commit ourselves to a criticism on this point, as we do not know with precision what extension of matter such an introduction would have required.

We see that Mr. Botfield is somewhat inclined to follow others in apologizing for the amount of attention paid to Latin and Greek writers in the fifteenth and sixteenth centuries. Hallam actually states it as a fact, that all the lettered, even the poets and dramatists, repaired to these languages for the materials of their knowledge and the nourishment of their minds. The statement is true, unless it be meant to imply that they had some other choice. Again, Mr. Botfield quotes Prescott to the following effect, that the scholars *disclaimed* all but the Latin tongue as the medium of publication and correspondence; that they wrote in Latin because they thought that lasting reputation could not be otherwise attained; but that they are not therefore to be despised as a race of unprofitable pedants. They wrote in the language they had learnt, the only language in which they *could* write literature. Those who have made themselves familiar with the oldest attempts at vernacular writing must have remarked the not unfrequent cases in which the poor author gets into the middle of a sentence which he finds he cannot finish, so that he

ends it in the Latin which really was in his mind. We are wrong in calling them learned merely because they wrote Latin. Therein we bear some resemblance to the gentleman ridiculed by Hutten, who declared that he could not believe Cæsar wrote the Commentaries, seeing that a man who was absorbed in politics and war could never have found time to be a scholar, and learn Latin; or to the worthy citizen who observed that education must be flourishing in France, for that even the children spoke French fluently. Our learned language was the literary vernacular. And if any one wished, at the smallest cost of time, to gain acquaintance with the higher and lower life of the educated man in, say, the year 1500, we do not see what he could do better, not having rarities at command, than direct his attention to the work before us and to the Colloquies of Erasmus.

Java; or, How to manage a Colony. Showing a Practical Solution of the Questions now affecting British India. By J. W. B. Money, Barrister-at-Law. 2 vols. (Hurst & Blackett.)

WE are indisposed to dwell upon the question whether Mr. Money succeeds in establishing his view or getting at his "practical solution" of Indian problems. It is at once apparent, from the tone of his Preface, that he has set himself to the task of "vindicting" Dutch policy and glorifying General Van den Bosch. No doubt there are many excellencies in the new Dutch system, and they were wanted, to atone for the barbarities of bygone times; but a hundred important differences might be pointed out between Java and India, most of which would have a bearing on the necessities of government in the two regions. Mr. Money is too confident at starting. We may believe General Van den Bosch to be an eminent man, but it is rather too much to speak of him as inferior to no statesman living. However, there is much to be learnt from these volumes; and, no doubt, an attentive study of them would be beneficial to an Indian administrator; but we prefer, for the moment, some sketches of the country, which Dumas has so wildly pictured in 'Dr. Basilus.' There is a great charm in Java, notwithstanding that the manners of its European community have sometimes offended strangers, albeit our English voyagers have of late been wonderfully enraptured with the nudities of Japan, and seldom fail to take photographs of nature unadorned in the streams and creeks of the South Sea Islands. Mr. Money was not long in the island; but he saw sufficient of it to claim the authority of personal experience, and his investigations into its scheme of government seem to have been extensive. Batavia he found to be among the cleanest, prettiest and most flourishing of cities; its old reproach has vanished; it is at last healthy; the canals are pure; sweeping and draining have done their work; every house and wall, including the native mat huts, must be whitewashed twice a year; police regulations enforce the constant purification even of unoccupied premises; the streets are swept and watered three times a day; the sewers are continually flushed; Batavia, in consequence, claims not one of the stench attributed to Cologne. It is not, however, an imposing or stately capital. The houses, being built in fear of earthquakes, are only one story high; but the Dutch, in compensation, have brightened the city with clear canals, bordered with trees:—

"The villas are low, tile-roofed, one-storied houses, as bright and dazzling as green paint and whitewash can make them. The gardens are generally laid out in plots of beautiful flowers, set

in emerald-green turf, the rich and variegated colours of which are brought out by contrast with the bright yellow of the neatly-kept gravel drives. The houses and gardens are not shut in by high walls of masonry, as in Indian towns, but are open to the road, from which they are only divided by a ditch, and by a low, well-clipt Hibiscus hedge, or by a light railing of small posts, with pendent black chains."

There are sundry enticing glimpses of Dutch life in the Archipelago:—

"The European houses in Java are all built with deep front and back verandas, joined, through the centre of the house, by a wide open gallery, with rooms on each side. The usual sitting-room in the evening is the front veranda, in which, always brilliantly lighted up, the family collect after dinner to receive visits. The whole interior of the house is lit with argand lamps, an unusual number of which give light to the apartment in which the family are sitting, eight hanging and four moderator lamps frequently burning in the front veranda alone. Driving at night along the streets of Batavia, in the European quarter, you are carried past a succession of such houses, lighted as if for an illumination, with the family visible in the front veranda, a short distance from the road, all, quite regardless of lookers-on, engaged in their usual occupations, some reading, some working, and others talking. The usual dinner hour is half-past six, and from eight till eleven are the visiting hours. At certain houses there are fixed evenings in the week for general reception, but a visit is always welcome on other days, when the family are at home. The custom is for young men, after dinner, to drive along the streets, whence, observing which of their friends' houses are lighted up, they are enabled, without the trouble of previous inquiry, and without giving offence to those whose houses are passed by, to determine where their evenings may be spent."

The English in Batavia appeared satisfied with their residence, which rather astonished Mr. Money, after all he had heard. Some declared even that for a Dutchman, who is privileged, it was an earthly Paradise. It has always struck us, however, that Paradise is not the thing for men in their mortal state. A little bit of lunch in the country does, at any rate, as well:—

"The large wooden table which stands at one side was soon decked by the willing natives, with the large, clean, freshly-cut leaves of the plantain tree. On these the fresh bread, the hard-boiled eggs, the cold chicken, and the bottle of claret, which we had brought from our last night's resting-place, made a tempting display. The post-master's cottage supplied milk and hot water for the tea, and generally also fresh eggs for an omelet."

There is one bad institution in the island, Mr. Money admits. It is the native cook; but what of that?—

"The morning journeys in the open carriage over the mountain passes, stamp on the memory many a picture of gorges and of towering crags to mingle with and to rival the recollections of Switzerland. The former, however, far exceed the latter, in the beautiful accessories of dense Eastern foliage, and of bright tropical flowers, sparkling in a far more pearly dew, and in the magnificence of a far more lordly sun, throwing the first rays of his rising power over chequered field and broken valley below. The merry gallop of the horses gladdens the heart, and calls back colour and brightness to the faded cheek and eye that so lately seemed as if never to bloom again. The beautiful scenery and the fresh crisp air add zest to returning health and to reviving hope."

Then the dances, concerning which French authors are so rapturous:—

"The nautch was danced by six of the Regent's private Bayadères, in a manner differing from that of the dancing girls in India, slower, and chiefly consisting of a series of graceful positions and of movements of the arms and hands. Instead of remaining on one spot, they moved slowly in two bodies about the room, performing a series of panto-

mimic dramas. Of those we saw, the prettiest was a scene representing six brothers, who in one of the civil wars had taken opposite sides, and who, meeting in battle, described their contending emotions of brotherly love and duty to their respective parties. The manner in which they pointed their arrows at each other, and then let them drop from natural affection, would not have discredited the boards of Her Majesty's Theatre. The dress of these Bayadères is pretty; a kind of gold tiara is worn on the head; a gold corset, tight over the hips, drawn in at the waist, and crossing the breast just under the arms, leaves the shoulders and bust free; the Malay petticoat or sarong, folded close round the body, shows the movements of the lower limbs, and falls below the calf, and the naked feet and arms are set off with a few bracelets and bangles."

The Dutch have inoculated the people with habits of order and cleanliness. They would pave all the globe with coloured tiles, and clip the primeval forests into conventionality, if it were possible. As we now come upon the political economy and other gravities of Mr. Money's work, we bid him farewell.

NEW NOVELS.

Loving, and being Loved. By Annette Marie Maillard. 2 vols. (Saunders, Otley & Co.)—There is incident enough in this novel, with its sentimental title, to set up a dozen romances of real life. The complications and the mysteries baffle all comprehension. Readers will find themselves in the situation of the bewildered Irishman, who rushed up to a man walking quietly along Dame Street with the startling apostrophe, "*My dear fellow, are you yourself, or somebody else?*" The thread of mystery is very tangled, but it runs all through the story. The reader will in all probability read it quite through to the end, as he will not be able to flatter himself that he can see how things will turn out.

Under the Spell. By the Author of 'Grandmother's Money,' &c. 3 vols. (Hurst & Blackett.)—This novel begins extremely well, and the promise holds out for the first volume and half; the interest then becomes confused. The author attempts to drive a team of characters too many in hand; and the story becomes vague and perplexed. Characters in whom the reader has been interested disappear suddenly, and when they return their place has been filled up. There is an ambition to draw character, but a want of power to give vitality and action. There is great evidence of painstaking and care in writing the book—indeed, it is over-elaborated; the result being a woolliness and indistinctness of effect which detract from the interest of the work. The intention is to show the evil of selfishness, and how completely it undermines all that is noble and honourable, as well as generous in a man's character. The history of Edmund, the eldest son, is very unhappy, and the solution at the last is not very satisfactory to the reader's sympathies. The work is clever and thoughtful, but it wants brightness and lightness.

Baby Bianca; or, the Venetians. By Mrs. Richard Valentine. (Parker, Son & Bourne.)—'Baby Bianca' has a charming subject, and ought to have been a very interesting story, but it is a heavy one instead. The period of the story is the time of Henry the Eighth in England. The author lacks the magic touch which brings back the times and scenes that are past, making them as real as though they concerned ourselves of to-day. She is destitute of the necessary graphic power to make her descriptions interesting. The story is very disappointing, for it is only a modern Protestant tale, with the characters dressed in the costume of the period. All who have read Mr. Froude's History, will feel surprised that an author of such moderate powers should have attempted a story of that time, or that having Mr. Froude's book for a quarry she should not have succeeded in making something more entertaining from it. The dispute which King Henry the Eighth held personally with the schoolmaster, Lambert, in Westminster Hall, on points of doctrine, which resulted, as all know, in the martyrdom of the poor school-

master, one of the most pitiful and tragical stories in the annals of Martyrdom, is one of the incidents in Mrs. Valentine's story, but it is deprived of all colour and interest. The author speaks of "tickets for reserved seats," as though it had been a modern concert or an Exeter Hall meeting.

Side Winds. By Morton Rae. (Saunders, Otley & Co.)—"Side Winds" is a story which will promote softening of the brain, and we should warn readers from attempting it, were it not that it carries its own safeguard with it. No reader will be likely, of his own unassisted inclination, to read more than a few pages of 'Side Winds.' More than any tale we have seen for a long time, it merits the praise bestowed by Mrs. Wittiterly in 'Nicholas Nickleby' on her favourite novel—"It is so soft!"

Retribution: a Novel. By Mrs. Augustus Peel. 3 vols. (Newby).—"If I were lieutenant of the police, there should be no cabriolets," was an observation of King Louis the Fifteenth, as he looked out of his window one day and saw the dangers to which his poor subjects who had to go on foot were exposed; and we say, if we were a despotic monarch nobody should write a novel who, in the first place, was not able to be amusing,—and who, in the second place, had not enough common sense to be capable of making the tale probable. 'Retribution' is as foolish and ill written as any novel we have met with for a long time; it is not amusing, and there is a small amount of consolation in the thought that it is not a picture of life and manners, for although men and women do foolish, mad and wicked actions often enough, still they are not like the "characters" in the present novel.

Edmondale; or, a Family Chronicle. (Saunders, Otley & Co.)—This is a chronicle of the smallest of small beer; it has not, however, the virtue of small beer, which is briskness—it is very flat. The young lady, for very young we hope she is, who has put forth this novel, writes with a school-girl flippancy which we hoped had been exploded, and the incidents of her story are so trivial that it is an impertinence to set them before the public. The author shows no sign of a vocation for writing a book of any description whatever.

The Tablette Booke of Ladye Mary Keyes, owne Sister to the Misfortunate Lady Jane Dudley. Writt in the Yeare of Oure Lorde 1576. (Saunders, Otley & Co.)—This 'Tablette Booke' is an attempt at an historical story, but the writer knows very little, if anything, about the period. She is deficient in the common reading which she was bound to get up before she set pen to paper. The imitation old spelling is wonderfully like the orthography of the celebrated Jeames, in the 'Yellow Plush Diary.' The story has a mild interest, in virtue of the subject, but anything like truth of character or authentic facts is entirely wanting.

OUR LIBRARY TABLE.

Sketching Rambles; or, Nature in the Alps and Apennines. By Agnes and Maria E. Catlow. 2 vols. (Hogg & Sons.)—These are two thick volumes, containing the experiences of two English gentlemen in Switzerland and Italy, among the marvels of Nature and Art which are within the reach of ordinary tourists. We have not fallen in them on a single new remark, nor met the description of an object which probably has not been described five hundred times before. The writers, already pleasantly known to us by their works on Natural History, are most interesting, perhaps, when treating the minute aspects of Nature; but in their notices of familiar pictures, architecture, music or manners, of which the larger part of their book consists, the absence of anything like novelty or originality is indeed curious;—especially when the statement of such fact is followed by the assurance that we have gone through the book, not merely without weariness, but with a certain quiet pleasure, hackneyed though the matter and unambitious though the manner of it be. Well was it said by Horace Walpole, when speaking of one of his female friends, "Propriety is a grace,"—not the hollow show thereof, so skilfully satirized by Mr. Dickens in his character of Mrs. General,

but the quiet, womanly common sense of those who will not affect what they do not feel, nor speak to what they do not know,—who, if not very profound, are never pert,—and who leave the heights and the depths of fine or funny writing to others of the sisterhood less skilled in self-knowledge than themselves. The Englishwoman abroad is too often terrible to meet personally or in print, for those who would see our island honoured in its daughters. The taste and temper shown by these two sisters mark them out as belonging to a far different species, and make them agreeable, if not exciting, as companions among well-known scenes and objects.

Sibyl; and other Poems. By John Lyttleton. (Smith, Elder & Co.)—There is something of the power and picturesqueness of true poetry in 'Sibyl,' a wild story of love and hatred told in soldierly blank verse, and with a bitter, biting brevity of expression. The writer can describe, as some lines written at mid-day in the hot weather of Burmah will show:—

Scarcely a foot-breadth lay the line of shade
Before my tent at noon: the tent-ropes only
Threw their thin dusky lines upon the ground.
It seemed as if the earth had died: the wind
Breathed not upon the hot death of the ground:
I had not wondered if huge cracks had opened,
And flames burst forth to burn the useless body.

One thing only
Played as in mockery o'er the ghastly scene
(As a long trail of ants upon a grave).
The sunlight showered a noiseless golden rain
From where I sat, right over the broad river;
Fiercely it seemed to fall, that muffled hail
Of molten gold-dust, as the dread largesse
Of day's strong tyrant king.

—Here is a short, sharp "War-cry," sword-like to the point:—

Work we want—not words;
Arms that will not tire;
Men who will out and hew the wood,
Ere they warm themselves at the fire.
Children to feed, and fathers to slay for them!
This is our life, and we must not shirk,—
Men to fight, and women to pray for them!
Unclass their necks then: women! make way for them!
Let them do their appointed work!
And yours (Oh, weep not, but be ye proud,
Mothers and wives of God-made men!)
Is to deck the cradle, and weave the shroud.
Yet let not your weeping be long or loud,
But pray unto God that ye be allowed
To welcome them back again!

—Our last quotation from this little book is a song strictly irregular in measure and philosophy, but characteristic and piquant:—

SONG.

Love sets one thinking—
Well-a-day:
Thinking sets one drinking—
Well it may!
Drinking brings on headache,
Sad to say!
Sadder still that dead ache,
Where our lost heart lay.
For the one is gone to-morrow,
Gone—for aye!
But love leaves doubt and sorrow
Many a day.
Hence I find 'tis wiser
Deep to drink;
Than, like fool or miser,
Deep to think.
But if you'd be clever
Other wights above,
Take my counsel, never
Know what 'tis to love:
For the drinking may pass off merrily,
And the thinking you may not rue:
But love, alas! necessarily
Entails the other two.

Prometheus' Daughter: a Poem. By Col. James Abbott. (Smith, Elder & Co.)—Here is another proof that the gallantry of British soldiers is equal to any need. Men who would lead a forlorn hope at St. Sebastian,—face death darkly at Inkermann,—stem the stern sunburnt swordsmen with Napier at Meenae,—charge the guns at Balaclava, or gallop through the death-gaps with Hodson and Havelock, might have quailed before writing these 378 pages of verse on such a subject. As a matter of course, with such abounding bravery, some of it is pretty sure to be wasted, and we are not able to chronicle a success commensurate with the daring. Still we are compelled to speak with all respect of Colonel Abbott's poem for its sustained purpose and fine stately verse. It is often classic in manner, and felicitous in fancy. Take this per-

sonification of Nature as a specimen, though selected at random:—

Nature hath risen from her trance, and joy
Still marks her rising; is her first employ.
Nature awakes in loveliness confessed,
As late she sank in loveliness to rest.
The languor soft enshrouding her repose
Like elfin robes fell from her as she rose,
Radiant in life and smiles, and every vein
Bend'ring the heart its full thro' back again:
As the pure tide recruited by her rest
Runs its glad round and sparkles thro' her breast.
In all her smiles, her freshness, and the might
Of heaven-born beauty, as she meets the sight
Of Man, she calls him with her gentle voice,
Diffused thro' earth, air, ocean, to rejoice!
For him, her smile doth beam, her song doth rise:
For him—Love's lustrous beacon, her pure eyes
Are lighted up to lure him with their ray
To peace that blooms where her sweet footsteps stray.
So broke the morn: so Nature wooed to bless,
And vainly tempted Man to happiness.

Philo-Socrates: a Series of Papers, wherein Subjects are investigated which there is reason to believe, would have interested Socrates, and in a Manner that he would not disapprove, were he among us now, gifted with the Knowledge, and familiar with the Habits and Doings of our Times. Part II. *Among the Boys.* By William Ellis. (Smith, Elder & Co.)—The conversations of Philo-Socrates and his young friends in the present number of this educational series turn upon labour-selling, labour-buying, interchange, weights and measures, money and price. On the whole, Part II. is a decided improvement on Part I., both as regards the selection of subjects and their treatment. As a guide to boys designed for industrial and commercial pursuits, Mr. Ellis merits commendation. He must, however, not forget to amuse his youthful disciples, while he aims at instructing them.

The Practice of Hand-turning in Wood, Ivory, Shell, &c. With Instructions for Turning such Works in Metal as may be required in the Practice of turning in Wood, Ivory, &c. Also, an Appendix on Ornamental Turning. By Francis Campin. (Spon.)—Although Mr. Campin touches on the other departments of turning, he says the object of his "present treatise is to lay before the uninitiated in mechanical manipulations a concise and practical account of those processes which are connected with the art of wood-turning." In achieving this object, Mr. Campin has succeeded admirably, and we have pleasure in recommending him as an instructor to amateurs and apprentices.

Village Sketches, Descriptive of Club and School Festivals and other Village Gatherings and Institutions. By T. C. Whitehead, M.A. (Bosworth & Harrison.)—We do not like Mr. Whitehead the less for portraying the bright side of humble life,—for his bright side is a real and not an imaginary bright side. If his village is better and fairer than any hamlet prosaic experience can point to, it is still only what a village ought to try to be, and what nearly every English village in part is. Much sound good sense and noble feeling are displayed in these sketches. We cordially wish them a wide circulation.

Of serials in progress of publication we have, from Messrs. Chapman & Hall, Part IV. of Mr. Trollope's *Orley Farm*,—from Messrs. Bradbury & Evans, Part LV. of Mr. Knight's *History of England*, and Part XXX. of *The English Cyclopædia of Arts and Sciences*,—from Messrs. Chambers, Part VI. of *The Works of Shakespeare*, and Part XXVI. of *Chambers's Encyclopædia*,—from Messrs. Groombridge, Part XXXVI. of *Bree's Birds of Europe*, Part XII. of *Love's New and Rare Ferns*, and Part X. of *Couch's History of the Fishes of the British Islands*,—from Mr. Van Voorst, Part I. of *Soverby's British Wild Flowers*,—from Messrs. Routledge, Part III. of *Arthur Young's Farmers' Calendar*, and Part XXVIII. of *Routledge's Illustrated Natural History*,—from Messrs. Blackie, Part XL. of *A Comprehensive History of India*,—from Messrs. Cassell, Petter & Galpin, Part XXVI. of *Cassell's Illustrated Family Bible*, Part XXVIII. of *Cassell's Popular Natural History*, and Part XVIII. of *Cassell's Illustrated History of England*,—from Messrs. Ward & Lock, Part LIII. of *The Ladies' Treasury*,—from Mr. Beston, No. III. of *The Boy's Own Library*, and No. XV. of *The Englishwoman's Domestic Magazine*,—from Messrs. Griffin, Bohn

& Co., Part I. of *Bowdler's Shakspeare*, Part I. of *Hogarth's Works*, and Part I. of *Bryce's Family Gazetteer*.—Part III. of *Gamgee's Domestic Animals in Health and Disease* (Jack).—No. XXIX. of *Kington's Magazine for Boys* (Bosworth & Harrison).—and Part II. of *The Flowering-Plants of Great Britain* (Christian Knowledge Society).

HAMILTONIAN LOGIC.

I intend briefly to point out two remarkable things in the logical writings of the late Sir William Hamilton: the first, in this letter, relating to the common system; the second, in another letter, relating to his own. Why I have never touched on these points till now is of no moment; but my own reasons suggest the following questions, which I ask of any one who shall take up the defence. Did Hamilton, in any publication other than the oral publication of his own classroom, previously to 1852, ever announce that he had discarded the meaning of the word *some* which all logical writers adopt? And if so, where?

With logicians the word *some* has in all time been no more than a synonym of *not-none*: it has stood for *one or more, possibly all*. With the world at large it is sometimes *possibly all*, sometimes *certainly not all*, according to the matter spoken of. But with the logician "*some are*" is merely and no more than the contradiction of "*none are*." Of these two one is true and the other false; and *some* equally contains *some-certainly-not-all* and *some-possibly-all*.

But there is one point of meaning in which all sorts and conditions of men are of one tongue with the logician. Everyone who is promised *some* of anything which he has a mind to, thinks himself wronged, deceived, and cheated if he get *none*; and most of all if the word of promise were "*some at least*." The law most expressly recognizes this exclusion of *none* from the meaning of *some*. Not long ago a criminal had been sentenced by a Court to imprisonment, accompanied by what a logician would call "*some whipping*." The gaoler forgot the poor fellow's vested interests, and gave him *none*. The criminal, feeling that he had been deprived of part of his means of reformation, brought his action against the gaoler, and gained a verdict.

But Hamilton affirms that the logician, under "*some at least*," includes "*possibly none*." This the following quotation will establish ('Discussions,' 1st edit., page 635; 2nd edit., page 690):—

"But, in the second place, in point of fact, the Aristotelian contradiction only proceeds on a certain arbitrary hypothesis of particularity: to wit, that '*some*' is to mean only '*some at least*,' (possibly, therefore, all or none) thus constituting, both in affirmation and in negation, virtually

a double proposition,—a proposition comprising, in effect, two contraries."

There is no ambiguity here. Hamilton clench his assertion that "*some at least*" may be *none* as well as *all*, by affirming that under "*some are*" the logician gives a possibility of either of the logical contraries "*all are*" and "*none are*." But for this, it might have been thought that the words "*or none*" came by mere slip of the pen.

I say no more until I see what defence or extension can be given. Should no one among those who are known to cultivate logic attempt an explanation of this remarkable passage, I shall myself endeavour to show that the slip is not of that very gross and illiterate character which at first sight it appears to deserve. There is a long note to the passage, but it is avowedly on Hamilton's own use of the word *some*, as distinguished from that of the Aristotelians. My criticism refers entirely to Hamilton's view of the Aristotelian meaning.

A. DE MORGAN.

THE GORILLA WAR.

July 6th, 1861.

Mr. Murray accuses me of "virulent persecution of a foreign traveller." I deny the charge altogether. I bear not the slightest ill will to Mr. Du Chaillu, whom I regard throughout as more sinned against than sinning. I have merely shown (and in this I know that I have the vast majority of competent judges on my side) that Mr. Du Chaillu's merits have been grossly exaggerated; and that the man whom some unwise friends still venture to exalt above Livingstone and Barth, has no title to be placed in competition, and will, in fact, not bear the slightest comparison with Wallace, Bates, Fraser and many other scientific travellers, whose Zoological Collections have been infinitely superior, who have made large and accurate and trustworthy notes, and whose names are, nevertheless, utterly unknown to the non-scientific world.

In regard to the figure of the skeleton of the Gorilla at p. 370 of Mr. Du Chaillu's work, I still maintain that, if not taken from Mr. Fenton's photograph, the coincidence between the idea and execution of the two is little less than miraculous. On the day the book appeared, and before any discussion concerning it had arisen, I was turning over the leaves, when one of our most distinguished Comparative Anatomists, who had long made the Gorilla his special study, declared this figure to be "an exaggerated copy of Fenton's photograph." In this light I have always spoken of it. I have never stated it to be an accurate copy; but have always maintained it to be slightly altered and exaggerated with a view to contrast with the human skeleton placed by its side. I have since seen the Photograph and the Plate pinned up, side by side, at a Scientific *Soirée*, and did not hear a single doubt expressed as to the one being copied from the other. If, therefore, I am really in error on this point, my error has been very generally shared. Mr. Murray himself has taken nearly three weeks, and states that he employed compasses and tracing paper, and made the most minute examination before coming to the conclusion that the two figures were absolutely distinct. It is obvious, therefore, that the resemblance must, to say the least, be very striking.

With the exception of certain strong expressions, which I (who am continually accused of using strong and "virulent" language) will neither imitate nor notice, there is nothing else in Mr. Murray's letter to call for a reply. He accuses me of not "waiting" for evidence; but I have waited long and vainly for any evidence that would justify the many inaccuracies, or reconcile the extraordinary contradictions which I and so many others have pointed out in Mr. Du Chaillu's work.

JOHN EDW. GRAY.

* * We have omitted from Dr. Gray's letter a paragraph which would have brought us a reply on grounds outside the argument proper. We think our readers will be content to leave this controversy where it now stands,—and unless some special reason should present itself for its renewal, we must ask permission to close, at this stage, the discussion of M. Du Chaillu's travels.

THE INTERNATIONAL EXHIBITION BUILDING.

SOME weeks ago we called attention to the fact that much criticism which was being expended upon the popularly received representations of the Great International Exhibition Building for 1862 was unjust: because not only were the engravings published incorrect, but even the originals themselves were not decided on. We deprecated criticism on the form of the domes, which are to hold a central place at the intersection of each transept with the great naves, and urged upon the designers the immense importance of giving mature consideration to the form of works which could not but be most conspicuous objects in our London landscape. The plans have been decided on, and from an inspection of the sketches we are enabled to report something more about them. As far as we are enabled to judge from these rudimentary, so to speak, representations, there is not the slightest ground for apprehension that the domes will be less elegant in their proportions than magnificent in bulk and altitude, far surpassing in these respects any England has yet seen, as they will unquestionably be.

The design for the east and west fronts, that is, the façades, which extend along the Exhibition Road to the east and Prince Albert's Road to the west, are definitively settled, that is, as far as the constructive character and general disposition of the masses of brickwork to be employed go:—what decorations shall be imposed upon this massive skeleton, whether of stone, marble, coloured earthenware, tinted cement, or white stucco, has been wisely left for an after-consideration—to be decided when a knowledge of the funds disposable has been obtained. Mosaics are spoken of by the aspiring, tinted cements by those who are inclined to moderate their hopes to the certainly practicable. With allowance for this circumstance, which must influence every opinion, the design must be received. Not only have the east and west façades been decided on, but what, unless we are much mistaken, will please all parties, i. e., the northern façade, overlooking the Gardens of the Horticultural Society, has been definitively settled. This last portion is indeed already far advanced, and some idea of its general appearance may be obtained from the Garden itself—the lower end of which, as our readers know, is inclosed by the advance of the transepts of the Exhibition building some seventy-five feet to the northward of the line formed by the southern boundary of the Society's grounds. An element of great picturesque value is obtained thus, further improved by the line of the façade in question being broken by two long and deep bays and their corresponding three advanced fronts, the centre of which is 290 feet long—almost the length, within ten feet, of the King's Library at the British Museum. Retreating bays on either side of 200 feet, each set 27 feet back, and two minor advanced fronts on the angles, of 50 feet each, give us 800 feet of garden frontage, to which may be added another 108 for the return angles of the recesses, amounting to twice the greatest width of the Exhibition building of 1851. This is exclusive, of course, of the width of the transepts themselves, adding which we get 1,150 feet—the length of the south front, which extends along the Cromwell Road,—the façade of the Great Picture Gallery,—an extent more than 100 feet longer than twice the admeasurement of Westminster Abbey from the great western door to the apse of Henry the Seventh's Chapel.

As the northern or garden front of the design may be said to have been the last considered, and least known to the public, we shall describe its aspect in the first place. It will be understood that this façade is divided into two floors; indeed, it has, as will be seen, a mezzanine flat interposed. The lowermost of these consists of the actual corridor of the arcade of the Horticultural Gardens themselves, already described by us as having been designed by Capt. Fowke, after the cloisters of St. John Lateran at Rome, a work of the twelfth century, and presenting an appearance of extreme and striking elegance and beauty of character. The success of the adaptation is really perfect. It will be borne in mind that the whole of the front

we are now considering may be divided into five faces, similar in character, but upon different lines of advance, owing to the introduction of two deep bays.

A still greater variety and relief of design is obtained by the central and most important mass into three sections. Thus the middle of the whole front is occupied, on the ground line, by the entrance from the building to the garden—a wide and handsome doorway, divided into three openings by intervening columns, upon plinths, with round-headed arches between them. The wide opening thus gained has been cleverly taken advantage of to afford a view of the entire length of the Gardens themselves, terminated by the cascade near their northern extremity, which the visitor of the Exhibition will obtain on entering the great entrance on the south front of the Exhibition building. It needs but a moment's consideration to recognize how eminently valuable this picturesque advantage will be. Across the gorgeous courts, catching glimpses of innumerable colours, and through rich belts of light and shade, enlivened by throngs of gay dresses and moving thousands, the eye will penetrate on to the rising green banks and verdurous alleys of the pleasure-garden, fairy-like with flowers, and basking in the sun, to where the great cascade pours itself into its wide and glittering basin, girt about with statues that watch the stream, and backed, above all, by the conservatory's walls of glass and the sweeping colonnades Mr. Smirke designed from the Villa Albani, which inclose and curve round the head of the garden.

Taking a view of the façade in its five divisions, horizontally, we find the central mass to consist of three levels; the arcade of the gardens, a shallow mezzanine, the course of which is interrupted by the elevation of the central entrance to the gardens above referred to, being carried higher than the ordinary level of the arcade to that which embraces the height of the mezzanine floor also. From this last level an uninterrupted line runs along, filled with glass, of an arcade; in front of which will be balconies, we believe, from which a charming view of the gardens may be obtained. Here will be the principal refreshment-room. Over this, the roof will be seen, of a good pitch, broken, of course, in accordance with the ground-plan of the façade. Over the entrance will be a line of five lights to the arcade. In the wing masses of this central division will be, on each, two, and two blanks of wall (pilasters, to be decorated). Then, on the third section, will be four divisions (separated by pilasters) of three lights each. In the fourth section, one light. All the blank masses of wall are broken with panneling and enriched with pilasters. All the arched openings are semi-circular headed—a character which is maintained throughout. In the recesses, which are set back 27 feet, and are 200 feet long each, are eleven lights, similar to those in the third division of the central mass. This extends to where the arcade returns into the garden again, 27 feet; and in the 50 feet which completes the length to the angle are two lights, similar to those in the third division. Without describing the special characters of each section, which, indeed, differ only in disposition of constructive elements, it will be seen from this that much diversity has been obtained in the arrangement of masses; while general uniformity and repose, as well as elegance, have been successfully sought. The whole is in perfect keeping with the garden arcades on either hand.

Let us now consider the east and west fronts or ends of the building; that on the north we have above described; that on the south we described some weeks ago. It is here, or we are much mistaken, that the public eye will rest with the most certainty and with the most satisfaction. Here are the enormous domes, 250 feet high, that is, 48 feet higher than the Monument; they are 135 feet in diameter; the sustaining walls are about 12 feet thick of solid brickwork, at the level of the flooring. These domes spring 107 feet above a light iron gallery which surrounds them outside and is placed on the top of the wall. Above the cupola a spire or finial springs 50 feet higher into the air. The gallery is 15 feet above the roof-ridge of the building itself. To the eye the proportion of each

dome will be pretty nearly that of a semicircle, but rendered much taller in appearance than that would imply by the division of its exterior into bands or faces, which diminish upwards. Its vertical height being 14 feet more than its semidiameter at bottom, the loss by perspective diminution will be more than rectified. Add to this the brilliancy of the glass, which the twenty-four ribs of iron sustain, and we believe that the general appearance of the whole will be highly satisfactory. In plan it is octangular, those faces which turn towards the cardinal points being twice the width of the intervening four. The light gallery, which will be of iron, has ornamental castings, or open pannel work on its front; at the angles, facing the angles of the dome itself, will be effective mouldings of iron, which serve to break the line of the parapet. The gallery will be supported from below by brackets or cantilevers. The crown of the dome above will be opaque for a certain distance; from this arises the finial, an ornament we cannot style elegant in form as at present designed, although the elements of a belted globe and huge spear-head for termination may be characteristic and even effective,—but united, as these are, with a variety of ugly and flat forms, such as a Bath bun suggests, the whole does not come up to its pretensions or position, being exceedingly common-place.

The dome occupies the centre of the east (or west) façade; its own centre is placed on the central line of the transept, therefore, the front of the building is advanced from it, and immediately before the dome; accordingly, we find the great porches, elements of the designs in which, beyond all question, the architect has been most successful. The front of this is 41 feet before the exterior sustaining walls of the dome; it is formed of three deep recesses, the middle and largest being 90 feet in span, the minor ones to the right and left 36 each. These are recessed with a deep covering capable of receiving infinite decorations by way of colour, mosaics, or even paintings, if such be desired, or, if allowed to retain the simple forms now intended, valuable for richness of effect of reflected light and bold shadow. In the tympan of the recess is placed the great rose window, which will be visible from end to end within, the window in one tympan closing the vista, as the spectator looks from a standing point beneath the other. This central recessed porch is nearly 100 feet high, or almost that of the grand middle nave behind it. What may be styled a pedimental gable rises over the centre of the middle recess, the ends of which rest on the roof of the piers which contain the minor porches. A bold line of balustrade on the top suffices to give lightness without being large enough to destroy the massing of the front. The actual entrances beneath each recess is inclosed with a frame of iron and glass, filling up the recesses about one-fourth of their height, having a balcony over each. In the minor porches the tympan are entirely filled in with glass, a happy thought enough. Much elegance of design is given by these advanced entrances, balconies and glass tympan. The flat brickwork of the wing-masses or piers, as we have above styled them, are relieved by pilasters, one on each side the minor porch; these carry a light cornice moulding, and above that a base, dado, &c. of panneling; at the angles of each wing-mass are standard holders for banners. A hood moulding is bent over each porch, which in the central one is tripled, but left perfectly plain, of unbroken mass, and susceptible of any ornamentation.

The whole of this central mass is advanced 18 feet before the general line of the façade, which thus much recessed, runs 235 feet to the north and south, with an arcade of double lights, each round-headed, divided by pilasters of brickwork. The extremity of this brings us to the grand masses of brickwork which form the angles of the entire building. As these, it is anticipated, will be thoroughly completed before any other portion of the building, we will examine them carefully. On the east (or west) the frontage is 59 feet 6 inches; on the return faces, looking south, 50 feet. The whole is divided into three masses, two at the angles, with roofs somewhat elevated over the

general line, and a minor centre: each contains a porch or entrance of similar character to those which are subordinate in the grand central mass above referred to. The tympan are to be filled in with glass, an advanced screen-porch, as before, and similar balconies. A pilaster occupies each side of each mass, by way of decoration; there is a cornice also of light character, similar to that before spoken of, and a balustrade above; but in the place of the pediment, or rather gable pitch, is to be placed a hideous oval light, or dormer window, with bold mouldings round it. This, being quite out of character with the whole of the rest of the design, and anything but beautiful in itself, we trust will not be constructed, feeling sure the architect will be able to supply the place it holds in the design with something more beautiful, of equal function and greater originality.

OUR WEEKLY GOSSIP.

THE President and Fellows of the Royal College of Physicians have issued cards for an evening reception on Wednesday next, July 17, at the rooms in Pall Mall East.

Under the sunny skies of Wednesday the public seemed to feel itself more at home in its lovely Italian Gardens at South Kensington. A very gay and numerous company gathered under the arcades and in the conservatory; but the show of roses, brilliant as it was, and the decorated tables, ornamental as they were, exercised less attractions for the general public than the promenades upon the arcades, the long sweep of ornamented walk, and the pictures formed by the abundant flowers and their richly-coloured settings. The roses, sunshine, and company composed into a rare and brilliant scene. Every one felt, we think, that the fortunes of these west-end gardens are now made.

Sir Francis Palgrave (whose proper name was Cohen, which he changed to Palgrave on his conversion from Judaism and his appointment to office), died on Saturday last, at the age of seventy-three. He was a good scholar and a clever writer. His works are numerous and voluminous; but his fame will mainly rest upon his contributions to early English History. His 'History of Normandy and England,' with some conspicuous faults, is a very able and valuable book.—The Master of the Rolls has appointed Mr. T. Duffus Hardy Assistant-Keeper of the Public Records, in the place of Sir Francis Palgrave.

Twenty-six Members of the Ray Society have requested the President to summon a Special General Meeting of the Members, to be held in London as early as possible, to inquire into the financial condition of the Society; and also to take into consideration the propriety of holding the Annual General Meetings of the Ray Society in London for the future. The President, in compliance with the foregoing requisition, has summoned a meeting for Monday next.

Verdict for the defendant—is the answer of twelve British jurors to the question of injury raised by Mr. Turnbull against the Secretary of the Protestant Alliance. After a very favourable hearing of the witnesses, and a most patient consideration of the evidence, the jury declared that the objections made to Mr. Turnbull's appointment as Calendarer of State Papers were reasonable objections, and that the pressure which compelled Mr. Turnbull to resign his post was a legitimate public defence against such evils as might be reasonably feared from his appointment.

The City of London has again rejected the proposal to establish free libraries for the people.

We hear from Liverpool that a duplicate of Mr. Baily's splendid bust of Admiral Blake has been placed in the library and museum of that town.

One or two minute points in our notice of Mrs. Browning we may extend and amend for the use of future biographers of the poetess, on the authority of one who cannot be mistaken as to the facts. Mr. Barrett, her father, we learn, was a country gentleman, not a merchant; and though he was not a learned man, we are told that his sympathy for intellectual cultivation and literary exercises was greater than is generally supposed. Some

time after leaving Cambridge Mr. Barrett purchased an estate in Hertfordshire, on which he resided for many years. Our authority is of opinion that Mrs. Browning owed less to the influences of Mr. Kenyon the poet and Mr. Boyd the Grecian than many persons believe. She had no correspondence with Mr. Kenyon until she was thirty years old,—and Mr. Boyd was so entirely a Greek scholar that he neglected all other forms of literature—a failing which most certainly could not be charged upon Mrs. Browning. It is claimed for the deceased poetess that she was essentially a self-taught and self-sustained artist, and the substance of this claim must in justice be allowed to her, even by those who trace in the utterance of her genius the pleasant and graceful effects of sympathy, companionship and admiration.

Jopling—Rifle King! A day singularly bright and clear allowed the selected forty riflemen to try their skill under favourable circumstances. Three ties of eighteen, three ties of seventeen, and four ties of sixteen, prove a high level of competency, and also a remarkable progress from the point attained last year. On the whole, the scores were about 10 per cent. higher than when Mr. Ross took the Queen's Prize. Mr. Ross himself has not fallen off; but Mr. Jopling, Lord Bury, Mr. Bingham, and a host of others have greatly advanced. It was stated on the ground that Mr. Jopling sighted his rifle below the indicated mark to the extent of a hundred yards, and thus obtained a safer line of fire. This question, whether all the rifles are not oversighted for the long ranges, is well worth the consideration of General Hay. We understand that the General was much impressed with the result of Mr. Jopling's practice.

Prof. Babington, the newly-elected Professor of Botany, in the room of Prof. Henslow, is not, it seems, the Rev. C. Babington, the well-known botanist, but Mr. C. C. Babington, author of 'The Manual of British Botany.' This 'Manual' was the first publication in which our Flora took its proper place in relation to the botany of the European Continent. About twenty years ago, when any difficulty occurred, scarcely any British botanist ever thought of doing more than consulting an English or a British Flora; but now, in a similar case, the different authors of our own country, and the pages of half the best botanists of the Continent, are eagerly turned over, and for this change we are mainly indebted to Prof. Babington. The same gentleman also, in his 'Primitivæ Floræ Sarnicæ,' introduced that system of subdivision into districts which has been followed, with so much advantage, in almost all the local Floras which have since appeared. In the more recent 'Flora of Cambridge,' another improvement is introduced; the local history of each species is traced up to the earliest period in which there is any certain botanical knowledge of its existence. We sincerely hope this practice will be followed by the writers of future Floras, and we anticipate from it most important results. We have been led to make these observations because we do not think they have been sufficiently remembered even by persons much accustomed to the writings of Prof. Babington. In all of them, both those mentioned above and others scattered over numerous periodicals, quantity of matter is not so much their characteristic as the large amount of new, valuable and thoroughly reliable information they contain.

A remarkable return has been published, in connexion with the Census of 1861, showing the wonderful increase of exports from Great Britain since 1845. The population has increased during the two decennial periods, 1841-51—1851-61, 14 per cent.; and the increase in the principal exports has been as follows:—Apparel, 286 per cent.; beer and ale, 316; brass and copper manufactures, 76; coals, 242; cotton, 120; hardwares, 246; leather, 361; linen, 60; machinery, 325; silk, 412; woollen manufactures and yarn, 280.

A Scottish Correspondent informs us that the amusing lines on John, Provost of Dundee, which we lately quoted, should be read as two distinct epitaphs. The facts are said to have been these. John died in office, and his fellow citizens offered a prize for the best epitaph contained in a couple of lines. Two of the candidates produced

lines of such point and beauty that the judges, unable to decide between them, put them both on the stone. The correct readings, we are now assured, are:—

Here lies John, Provost of Dundee,
Here lies him, here lies he.

Here lies John, Provost of Dundee,
Tweedle dum, Tweedle dee.

To the same Correspondent we are obliged for this additional "reading in graveyards":—

Here lies interred a man a' micht,
His name was Malcolm Downie:
He lost his life as market night,
By fa'in off his pownie.

This pathetic bit of personal history is recorded in one of the Highland graveyards.

When the Siamese ambassadors came to England, some three or four years since, they brought with them about fourscore boxes containing specimens of the produce of their country. This precious cargo was stowed most carefully away in the cellars of the Foreign Office, where, a few weeks ago, the boxes giving unpleasant indications of their existence, they were examined, and found to contain various food and animal products. This has led to their transference to the South Kensington Museum. No room at present exists for the exhibition of the whole of the collection, but a few specimens of the food products are exposed in a case in the food department. They consist of elephants' trunks, rhinoceros' hide, sharks' fins, deer's tendons and gelatinous delicacies of that kind, and also of edible birds'-nests, dried fish, betel nuts, tobacco, and various unknown seeds. These are only a small portion of the collection, which has suffered a good deal during its seclusion, especially the tubs containing varieties of "bêches de mer," sea slugs, dried cockles, and other marine delicacies of a perishable nature.

We have to correct a slip which occurred in our "Gossip" of last week. Herr Hermann Grimm, the son-in-law of Bettina, is not, as indicated there, the son of Jacob Grimm, but of the late Wilhelm Grimm.

When M. Thiers had the prize of 20,000 francs awarded to him by the French Academy, a rumour was circulated, at Paris, that the Emperor had tried to compensate George Sand, who was so near winning the prize, by presenting her with a sum of equal amount, and that the celebrated writer had accepted the gift. Madame Dudevant writes to a friend on the subject:—"A rumour is circulated, which I beg you to contradict. It is true that gracious offers have been made to me, but I did not think myself justified in accepting them, as I feel neither the desire nor the want to be rewarded or distinguished in any way, by whatever Government it may be.—George Sand." If we applaud Madame Dudevant for her independence of character, we must give credit to the Emperor for his courtesy. His uncle was not famous for his politeness to clever and book-writing women; the nephew in this respect is more fortunate, for however much opposed literary men in general are to his Government, we know more than one female writer who is his enthusiastic friend. Is this one of the perversenesses of the fair sex, or its amiable quality to see only the good in man? The Emperor ought to be aware by this time, that the authors whom he can buy are not worth having, and that those only who refuse his money will add to the "gloire" of his Empire. "Give us liberty of thought," says Marquis Posa to Philip of Spain, in Schiller's 'Don Carlos.'

The following amusing communication is taken from the Paris Correspondence of the *Vossische Zeitung* of Berlin:—Last year there appeared, published by Gide, a work, splendidly printed and expensively illustrated, entitled 'Manuscript pictographique américain, précédé d'une Notice sur l'idéographie des Peaux-Rouges, par Em. Domecch. Ouvrage publié sous les auspices de M. le Ministre d'Etat et de la Maison de l'Empereur.' The editor gives an account of the MS.; it has been for about a century in the Bibliothèque de l'Arsenal, and is described in the Catalogue as the 'Book of the Savages.' It was said to have been acquired, with other books, from the collection of the Marquis de Paulmy, who received it from some

traveller from North America. The published book contains 119 pages of letter-press and 228 engraved plates, in royal 8vo. The plates are fac-similes of the MS., and contain a great number of "rude figures and hieroglyphics" in coarse lead-pencil and red chalk, and the paper evidently of a coarse Canadian make. M. Paul Lacroix says, in the Preface, that not being acquainted with the hieroglyphics of the Red-skins, he does not pretend a translation; but will endeavour to explain their meaning as nearly as he can. The book got by chance into the hands of a German, whose astonishment one may imagine when he discovered that the pretended hieroglyphics of the Red-skins turned out to be nothing more nor less than the sketch-book of a child, probably of a German emigrant, of from five to seven years of age, proved by the writing in German current hand, such as a child would write when beginning to write—a genuine German schoolboy hand. The Correspondent gives a few amusing specimens:—Plate 47, under a figure of a woman, delineated by a small circle, with two dots for eyes, and a larger one under it, the word "Anna,"—Plate 144, a couple of red lines, described by the learned editor as "Emblem of lightning, symbol of Divine wrath," the young author has written "Wursad" (Wurst=sausage),—Plate 145, two figures holding a body, supposed to be a loaf of bread, he has written "Faasdag" (Fast-tag=fast-day),—Plate 148, several figures holding up their line-like arms towards heaven, we read, "Gott mein Zeuge" (God my witness),—Plate 119 has a rude representation of a honeycomb, and the youth has written three times "Honig" (honey). On almost all there are, besides the figures, rude childish representations of guns, church-steeple, a pyx and other utensils of Roman Catholic worship, with words from the Romish Catechism, all in the juvenile German current hand. The absurdity of the whole production has probably never been equalled. There are many German compositors engaged in the French printing-offices; had one of them but by chance seen the plates before they were issued, he would at once have recognized the fatherland of the author, and thus saved the 'Ministre d'Etat et de la Maison de l'Empereur' the disgrace of having published, at the expense of the State, a fac-simile of the "scribbling-book of an infant," and issuing it as the hieroglyphics of the Red Indians.

Will Close on Saturday, the 21st inst.

ROYAL ACADEMY of ARTS, Trafalgar Square.—The EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admission (from Eight till Seven o'clock), One Shilling; Catalogues, One Shilling.
JOHN PRESCOTT KNIGHT, R.A., Secretary.

Will Close shortly.

SOCIETY of PAINTERS in WATER COLOURS.—The FIFTY-SEVENTH ANNUAL EXHIBITION, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.
JOSEPH J. JENKINS, Secretary.

THE NEW SOCIETY of PAINTERS in WATER COLOURS.—The TWENTY-SEVENTH ANNUAL EXHIBITION is NOW OPEN, at the Gallery, 53, Pall Mall West.—Admission, 1s.; Catalogue, 6d.; Season Tickets, 5s.
JAMES FAHEY, Sec.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN daily from Ten to Six.—Admission, 1s.; Catalogue, 6d.
GEORGE NICOL, Secretary.

WILL OPEN THIS DAY, EXHIBITION of the EIGHT HISTORICAL PICTURES, painted by WILLIAM BELL SCOTT for Sir W. Calverly Trevelyan Bart., illustrating the History of the English Border, 'Building the Roman Wall,' 'St. Cuthbert the Hermit,' 'Venerable Bede,' 'The Descent of the Dove,' 'The Spur in the Dish,' 'Bernard Gilpin,' 'Grace Darling,' and 'Our Own Day.'—French Gallery, 130, Pall Mall.—Admission, One Shilling.

ROME will be CLOSED IN A FEW DAYS, at BURFORD'S PANORAMA ROYAL, Leicester Square, the entire of which world-famed Exhibition is NOW OPEN at a reduced charge of 1s., including ROME, MESSINA, and SWITZERLAND. Daily, from Ten till Dusk.

SCIENCE

Edinburgh Papers. By Robert Chambers. *Ice and Water: a Review of the Superficial Formation.* (Chambers.)

ICE and water are both acceptable things just now, and are likely to be still more so as the season advances; but Mr. R. Chambers here brings before us in imagination ice long since melted and water long since dried up. Like nearly all amateur geologists, he has his

favourite branch of inquiry. Formerly it was ancient sea-margins, and then he was ever discovering old sea-beaches in the oddest places for such antiquities; amongst others, if we remember rightly, even in old Camden Town as well as in old Edinburgh. Where men and women have been living and dying quietly for many generations, our worthy amateur was peering about for a watery line, a bed of pebbles, and the *débris* of a primeval shore, upon which the monotonous murmur of the waves of most ancient seas preceded the present roll of rumbling omnibuses, the daily patterings of ten thousand human feet, and all the humble offices of trade and servitude, and the changes of numberless human births, lives and deaths. The pebble now being crushed beneath the wheel of a cab was once rounded by the waters of those oceans, and in the very line of that road which it is now so dangerous to cross in mid-day, the winds and the waves had it all to themselves—if you will only let Mr. R. Chambers have all the talk and all the theory to himself. There were those who thought he had brought the old seas too far, and fancied the old beaches too often; but a theory of this kind is pleasant enough when an intelligent man fondles it and dresses it in good verbiage, whatever you may think of its truth, and of those so-called "Memorials of Changes in the Relative Level of Sea and Land."

From ancient sea-margins to glaciers and ice-work is not a surprising interval. Superficial formations are concerned in both cases, and in treating of glacial phenomena the author has only to descend a little lower in the earth's crust. What is technically known as the Pleistocene Era comprises in Scotland, according to Mr. Chambers, seven different kinds of deposits, of which the third in descent is described as "Ancient Valley Glaciers and Moraines," and the fifth and seventh imply glacial conditions. If you will follow and confide in Mr. Chambers even only in the Valley of the Forth, he will show you every suitable piece of surface which is laid bare, smoothed and marked with striae or scratches directed to a point 15° north of east. You shall find, under his guidance, the surface of the country variegated with hills of a longitudinal form, and many of them having hollows or troughs between,—such as the Dalmahoy Hill, the hill on which the Old Town of Edinburgh is built, and the Garleton Hills, in East Lothian; and you shall discern that all these hills and hollows lie precisely in the direction of the striae on the subjacent surfaces, showing that such hills and hollows derived their mould and general form from the same agent as smoothed and scratched the surfaces. Take the lately-published Survey Map of Edinburgh, and it will readily show (or Mr. Chambers will) that the district is wholly composed of ridges and troughs all of which lie in the direction indicated. Moreover, the very direction of some main streets of the city has been determined by this primeval agent, because a line of buildings like that of Princes Street is naturally laid down along the front of such a ridge and in the direction which it takes. In this view, then, Ice was the great and ancient planner of proud Modern Athens, or its principal streets; and the fair city now teeming with life and adorned by Art stretches out along a once cold, glistening line, when man was not, and cities had not risen from the dust.

Further still—let us on some such sunny afternoon as the present summer presents, direct our eyes to the face of the Pentland Hills; and while scanning them as they rise up some sixteen or seventeen hundred feet above the sea, we may discern great flutings or mouldings,

forming nearly horizontal bars of alternate light and shade along the mountain slopes (although the like may, indeed, be found on almost all the Scottish hills). These all fall into conformity with the lines of striation, and may consequently be ascribed to the same agency. "It is a startling deduction to come to," says our author, "yet the steps are clear and irresistible: that the same power which grazed, smoothed and scratched the beach rocks at Granton and Joppa, and the hollow way at Samson's Ribs and the Windy Gowl on Arthur's Seat, moulded not merely the low hills of the district, but the Pentland and Fife hills, which form the sides of the Forth Valley,—consequently, can only be conceived of as a vast mass of ice—vast enough to envelope lofty hills and fill deep valleys,—fluid enough to move over and along such a country, yet tenacious enough to hold firmly the grazing blocks and gravel by which it moulded, smoothed and incised the surface."

With such theories uppermost in his mind, Mr. Chambers can see everywhere enough to confirm the now increasingly entertained idea of glacial agency in superficial formations. On a large scale, for fifty miles along the west coast of Sutherland and Ross, there is a range of isolated mountains, of from 3,000 to 3,500 feet in height, standing widely apart from each other, and yet it is evident that they have all, at some time, been parts of one continuous formation. The large interspaces having been subsequently formed, the question is, by what destroying force? and the answer is *Ice*. Ample memorials of its agency exist along the mountain-sides, and on the platform of gneiss-rock whereon the mountains rest. These memorials consist of longitudinal hollows, containing lakes, all in the same direction as the major axes of the hills; and also of smoothings, scratchings, and transported boulders. Hitherto denudations of this kind have been attributed to water in its ordinary state; but it is evident that here (and elsewhere, as we can personally testify), to denude so vastly and so massively, the increased mechanical powers which water derives from congelation are necessary. There is, too, a marked difference between the dilapidations effected by water and those produced by ice. Water leaves all shattered and rough, confusedly scattered and wildly devastated: Ice cuts sharply through mountain-sides, saws them down, as it were, with its keen-edged scimitar, or wearing and wasting by stone-gatherings it makes clean work in opening mighty gaps. But an undoubted proof of glacial agency is that blocks are carried up-hill, contrary to gravitation, lifted above their original seats, and left oftentimes, as may be seen in the Welsh Pass of Llanberis, almost toppling over edged eminences, or standing alone, like huge nine-pins, as if they had been set up by sportive Titans, and needed but one Titanic bowl to hurl them down. Water-currents would never effect such transportations upward; whole cataracts could not have moved some of those glacial blocks one yard towards their present positions.

We strongly recommend to all summer and autumn tourists in mountainous regions the careful study of these phenomena. They impart a never-failing interest to scenes otherwise the most desolate and sterile. The pedestrian can climb and creep up to trace striae and note their directions, to scan oddly-poised blocks, to sit upon smoothed and mammillated surfaces and to sketch and measure and theorize on these things at his pleasure. When the mind is properly informed on such matters, even a party of pleasure may be pleasantly diversified by observations of this kind. Mr. Chambers

has an observation to this effect:—"I was accompanying a party of pleasure to the celebrated Bullers of Buchan; and, when in the midst of the gaiety of the hour, my eye accidentally and unexpectedly detected the boulder clay in the ancient *geo* (a narrow inlet for the sea) near by, I could not but appreciate the power of even such a slight knowledge of science as had fallen to my share, to give a charm to situations where no such thing is looked for."

There are several interesting particulars illustrative of these views in the 'Edinburgh Paper' which Mr. Chambers has now issued. He might have given many more; and it would have been as well if he had limited himself strictly to glacial phenomena, without touching on the as yet incipient questions connected with the flint implements found in gravel, and assumed to be of human workmanship, prior to the generally received chronology of man. The tokens of glacial agency are manifest, and are hardly capable of being misinterpreted, although possibly sometimes taken for granted a little too eagerly; but the supposed tokens of human handiwork in flint are at least *adhuc sub judice*, and should be separated from what is capable of ocular proof and sound geological reasoning.

The treatment of one branch of scientific inquiry in so simple and so accessible a form as this Paper presents is an advantage to the general reading public, who would certainly be grateful for additional papers of a like character. The present tractate would form a pleasing accompaniment for any tourist's carpet-bag or knapsack.

FINE ARTS

THE WALLINGTON PICTURES.

Mr. W. B. Scott has executed, as we have before stated, eight large oil paintings, now in the French Gallery, to be placed in the hall at Wallington, near Newcastle, the residence of Sir W. C. Trevelyan, Bart. These works being commissioned by the last-named gentleman to illustrate the history of the border counties, afford an example which many of our noblemen and gentlemen might worthily follow,—of having large, boldly executed, and characteristic pictures placed in their houses, which should represent the most important incidents in the localities to which so many of their names are attached. 'Chevy Chase' would surely be appropriate at a Percy's seat, and 'The Landing of William the Third' at that of a Bentinck. The Wallington pictures will occupy spaces on the walls of a handsome hall, the centre of which will be held by a group of sculpture, the work of Mr. Woolner. We will take the subjects separately, and say at once that the artist has dealt with them most vigorously and boldly, evincing the possession of immense power of dramatizing his successive themes: it is impossible to look at these productions and come away unimpressed with the variety, interest, character and largeness of treatment which he has given to them. It may be that the boldness and effective display are in each of these pictures carried rather too far, at least, in execution, for nothing could be less effective in the sense we are all liable to attach to that word, *i.e.*, showily meretricious, than the designs here referred to,—these are, indeed, expressive in the best sense, and while full of action fitly restrained. But it is possible to find faults of drawing:—here and there immense errors in the proportion of almost every figure; the handling is too often thin, without being "scamped," and there is a tendency to exaggeration of colour, which time may overcome, as, indeed, the dash of execution may be mellowed by the distance at which the paintings will be from the eye when placed in their intended compartments of the hall. On the whole, these works are worthy of admiration, and seem suited for their destinations.

Mr. Scott has begun with the *Building of the*

Roman Wall (No. 1), "*Hadrianus murum duxit qui barbaros Romanosque divideret.*" Right in the front is pitched the red-painted staff and brazen ensign of the cohort of the second legion, to which was given the charge of building, or rather superintending and aiding the builders, of that portion of the wall which stands near to Craig Lough, midway from sea to sea,—the scene chosen for the background, wherein is the long line of the wall running over hill and dale and along the edge of the beetling cliff, which looks over the waters of the mere. In front of the standard lie two Britons, too lazy to work without compulsion, and idling away the day at dice and cooking. The tools with which they should labour in their own defence lie upon the neglected work, even while below the fosse a party of Caledonians, led by a shrieking propheteess, assail the Roman auxiliaries who defend the walls. A swarthy Spaniard has an arrow in his shield as he looks down upon the savages. To the gambler and the glutton has come a tall Roman centurion, stepping over the unfinished work, his brazen helmet flashing in the sun, the black plume tossed in the wild norland wind and the tiger's skin flapping on his shoulders. He has in his hand a peeled wand, ensign of authority, and points therewith angrily to the stones unplaced, his eyes dilated with bitter wrath. The sulky, half-resentful Briton does not cover before him, but hides with one hand the die he played with. The expressions are perfect, both of action and face. Behind are legionaries of the Moorish, Spanish, and German cohorts at work upon the wall, and a party of recruits at drill.

No. 2, *St. Cuthbert*. The Saint has retired to one of the Farne Islands, and is here seen resisting the entreaties of the young King Egfrid to accept the crook of bishop, which he endeavours to place in his hand, so that he might not be compelled to leave his hermitage, which was said to be as full of devils as it was empty of men. Ultimately he took the charge, spent four years in the utmost usefulness, and then returned and died at his retreat. This picture is bright and vigorous. The figure of the Saint, owing to a want of careful drawing, loses much of its expressive action, consequently looks dislocated, broken-backed, awkward and clumsy. Those of the King and Bishop, who accompanies him, are good. The party has entered the inclosure of the Saint's garden, where he has been about to dig up onions for his frugal dinner. Around them go circling the wild sea-swallows, which tradition says Cuthbert tamed. Below lies the turbulent sea, bright in the sunlight and breeze, and, near the shore, the galleys of the king, with their monstrous carved sterns, the royal seat on the poop of one of them, with the body-armour and shield placed upon a staff, as if His Majesty were there.

No. 3 shows the *Death of the Venerable Bede* at Jarrow, in his own cell, while he was seated at the writing-table dictating to an acolyte the translation of the Gospel of St. John. "Take thy pen quickly, and write what remains," was the request of the dying man, and when the boy had completed his task, and told him so, he said, "Thou sayest well; it is ended. Glory be to the Father, and to the Son, and to the Holy Ghost!" and expired. As a work of Art, this picture is the best composed of the series; but it exhibits many of the faults and shortcomings above alluded to, nor does the expression seem to us to have been so carefully attended to as in most of the others.

No. 4, *The Descent of the Dances*, pleases us best, not only on account of its greater fidelity to Nature in the background, and the immense variety of incident introduced as occupying the figures, but because the scene is not without humour in conception, and seems more original in its very nature than any of the others. Tynemouth Rock, at the mouth of the Tyne, forms the background, hazy in the mists of a spring morning. The boats and galleys of the invaders are approaching the beach; while the first party has landed, and is scrambling up the cliff laden with all the paraphernalia of a quiet party of emigrants: ploughs, gardening tools, as well as weapons, in the hands of the men; an old woman laden with her cat and other valuables; the young mother with her child; the elder children with their toys. In short, it is clear the

party has come "to stay." Some men hastily erect a slight place of defence to secure the landing at the top of the cliff.—No. 5, *The Spur in the Dish*, relates to a border custom, that when the stock of the last plundering expedition of a moss-trooping family had become exhausted, the mistress of the house placed a dish upon the dinner-table with a spur in it, as a hint that the gentlemen-thieves must ride for more. Many of the men seem delighted at the chance of an expedition; but a monk on pilgrimage, who is guest for the day, does not either understand the custom or see the joke.—Bernard Gilpin's exploit in taking down the challenge-glove from over the altar in Rothbury Church, where some combative ruffian of a moss-man had hung it, by way of general challenge, forms the subject of the sixth picture, which is by no means up to the mark of the others. The stained-glass window of the church is in the background; Gilpin has the glove in his hand; while beside him stands a doll-like looking man with a simper on his face,—so inane a figure that it ought to be done over again, unless it be intended for a portrait of a 'noodle.' The opposing parties occupy opposite sides of the picture; between them, upon the floor of the church, lie the effigies of a knight and his lady. These last figures are well foreshortened.—No. 7, shows Grace Darling going with her father to the rescue of the surviving passengers and crew of the *Forfarshire*. Mr. Scott has placed us upon the deck of the steamer among the passengers, who are anxiously watching the approach of the boat; a sailor attends a sick gentleman; a woman holds a child in her lap; below, among the rocks, the raging sea dashing over, lies a part of the wreck and the bare leg of a drowned man. The faces are full of expression; the actions are characteristic and well given, without any conventional horrors—no small thing to say for such a subject in painting.

No. 8. is immediately of this day—*The Nineteenth Century, Iron and Coal*—a scene at a forge, or great ironworker's shop, on the banks of the Tyne. Some men with hammers labouring at the anvil,—the fire roaring and red,—a pit-boy with his safety-lamp and driving-whip,—a steamer coming alongside,—a photographer with his camera,—a gaily-dressed woman going out for a holiday,—a child seated on an Armstrong gun, holding her father's dinner in her lap, waiting for the hour to strike, and holding her school-book in her lap. We should truly have liked a prettier child for this object, which is unreasonably ugly and vulgar. A strong blaze of sunlight penetrates the dusty glittering atmosphere of the shop, and falls in brilliant beams upon some Armstrong shells that lie beside the gun. There are models of machinery, drawings, the air-pump of a marine-engine, newspapers, letters, anchors, &c. lying about. Without is the grimy and smoky Tyne, the bridges, keels laden with coal, smothering clouds of smoke, and all the proper concomitants of the locality.

WATER-COLOUR DRAWINGS AT MANCHESTER.

THERE is now open at the Royal Institution, Manchester, one of the most remarkable collections of water-colour drawings ever gathered together in this or, indeed, any other country. It is significant in many ways. It is well known that, with the exception of the Exhibitions of the Old and New Water-Colour Societies, it is next to impossible, if not quite impossible, to "get up" a respectable show of drawings, either in London or the provinces, if such getting-up is to depend upon the direct contributions of the artists themselves. The British School is not overstocked with workmen, nay, with the increased and increasing demand for drawings, our artists are overworked. This will be abundantly evident to any one who will visit the galleries east and west of Pall Mall in a week after the private views, when "the little blue ticket" will tell the tale of rapidity of purchase and avidity of purchasers. So completely do the two Associations swallow up all water-colour art, that the miserable attempts at their exhibition at the other galleries might be dispensed with to every one's advantage. In provincial towns this is even more apparent; hence water-colour drawings get, so few is their number, and so poor the quality, crammed into vestibules and

corridors, and mixed up with the vile doings of amateurs, as at Liverpool; or placed round halls and staircases, as we know we have more than once seen them at Manchester. Manchester has now, however, got the better of this state of things, has, by practical action, shown that there is a way of exhibiting water-colour art as it ought to be seen, and has put aside all fanciful notions as to what prudery calls legitimate exhibition, simply acknowledging the one great and only important principle, viz., getting together the largest amount of the highest Art attainable, as a means of public instruction, and quite irrespective of the question of sale. An exhibition cannot be formed by the direct contributions of artists;—there are not six distinguished men in the country with leisure to work for any exhibition after due attention has been paid to the legitimate demands of the Societies upon their members; and the Council of the Manchester Royal Institution, impressed with this fact set about the next best way of placing in these now well-lit galleries, an expressive representative collection, that not only eclipses the annual gatherings of this class of Art in London, but, as we have already intimated, surpasses all previous collections whatsoever. This Exhibition is formed by contributions direct from artists' studios, from private collections for the most part in the county of Lancaster, or from the portfolios of dealers. For reasons given already, the drawings from painters are few in number, but those from private collections in the neighbourhood are numerous and most valuable; and if the Exhibition had no other issue, it would still be valuable as showing the wide-spread taste and judgment of the wealthy in the county, who spend their money so wisely, and exhibit their wealth so bountifully. We have said that this is the finest collection of water-colours ever got together. It is not historically so valuable as the collection in the Art-Treasures Exhibition of 1857, neither is it quite so numerous, but for completeness of realization, for strength of name, it is a greater Exhibition. Even in numbers it suffers but little, when compared with that wonderful display of Manchester spirit. On that occasion we had 969 works exhibited; in the present collection we have 860.

The strength of the collection may be gathered from the following facts, and these facts must suffice, as any notice of individual works is clearly impossible in these pages. There are 10 drawings by Cooper, 34 by W. Hunt, 9 by Haghe, 8 by De Wint, 14 by Pyne, 12 by Stanfield, 7 by Holland, 8 by Richardson, 12 by Duncan, 22 by Cattermole, 5 by Harding, 4 by Gilbert, 15 by Tayler, 9 by Foster, 2 by Sir E. Landseer, 31 by Cox, 10 by Varley, 2 by Girtin, 10 by Fielding, 27 by Prout, 31 by Turner, 1 by MacIise, 11 by Roberts, 2 by Lewis, and similar numbers by nearly all the best men of the present century.

Although we need give no detailed criticism, we may state that, not only have we numerous works from great artists, but, for the most part, we have some of their greatest works. This will be seen when we state that the following are to be seen in the collection:—"Gulf of Spezia," by Pyne; "Interior of St. Peter's," by Haghe; "The Last Man from the Wreck," by Duncan; "A Pine Apple and Grapes," by W. Hunt; "Richard the Third," by Gilbert; "Devotion," by W. Hunt; "Crickeith Castle," by Pyne; "St. Paul's, Antwerp," by Read; "Old English Hospitality," by Cattermole; "The Highland Drover," by Tayler; "Arundel Castle," by Turner; "A Welsh Funeral," by Cox; "Falls of the Clyde," by Turner; "Llanberis Lake," by Varley; "Snowdon," by Fielding; "Boy with Candle," by W. Hunt; "On the Thames, near Streety," by Dodgson; "The Home of the Sea-Fowl," by Whymper; "Benvenuto Cellini," by Cattermole, and others of equal importance by the same painters, and by others, for whose names or works we have no further space.

We lament to add one complaint. The whole collection is hung excessively badly. With so much that was good, it was necessarily difficult to give good places to all; but there is a thorough absence of all Art-knowledge in the juxtaposition of the works as seen here.

FINE-ART GOSSIP.—We recorded some months ago the departure from Malta of an expedition, organized under the Foreign Office, for the purpose of making excavations upon the ancient site of Cyrene. Lieuts. Porcher and Smith were in charge, and their labours have been successful in the recovery of many interesting and valuable statues and other marbles, many of which are in perfect preservation. The most remarkable are—a statue of Bacchus, 6 feet high,—an Esculapius, 8 feet,—a statuette of a female, between 4 and 5 feet,—another of a female strangling a lion,—and, amongst other objects and fragments, twelve heads, notably one of Minerva, in perfect preservation. The Bacchus was found in a temple by itself. The other remains came from the Temple of Esculapius. Further excavations on a third temple are in progress, with good hopes of success. These discoveries already made will shortly be brought to London, and deposited in the British Museum.

The "Old Westminsters" monument in Broad Sanctuary, Westminster, has now been long enough before us to allow the formation of a deliberate judgment upon its (in England) somewhat novel characteristics. Upon the statue of St. George slaying the Dragon, which surmounts the whole, we have already expressed an opinion, and see no reason to alter our conviction, that it needs the elements of energetic action and what is called picturesque boldness. The dragon is a wretched creature, we think, not worth more trouble than the Saint is taking in his mildly represented action of chopping at, with evident intention of missing him. If it would not have been preferable to have imported more "go" into both is a question worth considering; as at any rate the poor beast was to be killed surely he might have been worth the trouble of killing—been "a wightie worm," in short. If the canons of architectonic art demand that no violent action should be displayed in a group placed as this is, lest the passing cab-horses should take fright, and, like Hippolytus, some driver of a Hansom perish because the—

Monster flung

His obscene body in the courser's path, we should prefer to see such groups placed where no such danger is to be feared, i.e., on a lower pedestal, out of the way of mischief. Beneath the group are placed four seated statues of English sovereigns, all more or less connected with the school of Westminster—Edward the Confessor, Henry the Third, Queens Elizabeth and Victoria. The canopies under which these figures are seated are of Early English character, with heavy finials, or rather cusps, on the apex and feet of each canopy, which last rest on small shafts of polished red granite, the caps of which are round. Under these comes the great capital of the column itself, rather clumsy mediævalized acanthus, with a bold cable moulding beneath it, which is in excellent keeping with the general character of the design. The abacus is square, of polished red granite. The shaft of the column is composed of eight pieces of polished granite, red also; these are neatly joined. To the endeavours to obtain the entire shaft in one piece, ultimately found impracticable, the long delay in completing the monument is to be attributed. A twisted band, from which are suspended eight shields with armorial bearings, breaks the line of this shaft. The base mouldings of the columns are of richly floreated character. The plinth itself is octangular in plan. Four of its faces are set in advance, and serve as pedestals for as many little lions, who are represented with each a paw on a Russian helmet or a broken ensign staff. A band of what may be styled nailhead moulding runs entirely round beneath. On the fronts of the little lions' pedestals are placed pilasters with carved caps; these pilasters rest upon the uppermost of those steps which sustain the whole work. On looking at the entire design from a slight distance it is impossible to deny it the merit of considerable picturesqueness and effective character, notwithstanding that the St. George and his dragon, the four sovereigns and their canopies, and the bulky head of the shaft, give somewhat of a top-heavy appearance. What we object to is the poverty of conception displayed

in the sculptor's work. The St. George is tame, and the lions are really funny.

We have before us a photograph from a drawing by Mr. H. R. Newton of his proposed scheme for embanking the river, showing the view as it would appear from the Victoria Tower in the Westminster Palace. The plan is somewhat similar to many others that are proposed—in its merits at least—and would advocate the construction of a long causeway, or rather pier, on either side of the river, at about one-fifth of its width from each bank; within these causeways would remain the shelving shores, whence the mud would be cleared by certain engineering provisions contemplated by the projector, and in the centre, between them, the mass of the stream would flow, as now—but between walls of stone arcades, which look to the eye mechanical and hard-hearted. Provisions for the entry of craft into the side-ways, which might be (if desired), we presume, made still-water at any time of the tide by the use of water-gates, and for the economical arrangement of the great sewers out of sight, are made by the designer. As we understand his explanation, he claims for such a plan as this, not only the above advantages, but that of gaining an immense space of valuable ground from the river, which might be used for the sites of public offices, thereby saving an enormous cost in the purchase of such as are now contemplated. Mr. Newton would have the architectural character of the buildings to be placed on these piers picturesquely varied, so that we need not be tied to any particular style. The conventional look of any such plan of continued arcades, supporting masses of building and a roadway, seems to us the strongest objection that can be made against Mr. Newton's particular version. The characteristic and often eminently effective and picturesque look which pertains to the shores of our dirty Thames would be completely destroyed by the adoption of anything of the sort. From a recent declaration in Parliament it is apparent however that to some such favour must we come, if we are to have anything done at all.

Mr. Mitchell publishes a lithographic portrait, H.G.D.H. Prince Louis of Hesse, drawn from a photograph, by Mr. R. J. Lane. The work, though a little weak, shows a tolerable representation of an intelligent, earnest-looking gentleman in a military coat.

On the 4th of this month, sixty-three years of age, died, at Newcastle-upon-Tyne, Mr. Richard Grainger, well known as the architect and builder to whom that town was indebted for almost all its modern improvements and decorative character. The beginning of his life was in the most obscure circumstances. By his intelligence and activity he rose from a carpenter's apprentice to be able to achieve the results above referred to, and the realization of a large fortune for himself. All his contemporaries bear a high testimony to his nobleness and manliness of character.

MUSIC AND THE DRAMA

ROYAL ITALIAN OPERA.—Midway betwixt Mdle. Piccolomini and Madame Bosio stands Mdle. Patti as representative of "La Traviata." She is generally considered to have made a decided step in public favour by her performance of the repulsive part. From this she expunges the picaresque element,—apparently (who can wonder!) wanting means or will to express it. Rate her where we may, Mdle. Patti is no singer to the stalls, no actress eking out deficiencies, as did the first *Traviata* seen in England, by nods and winks, and an air of sauciness, approaching immodesty, which was all the worse because it was assumed.—But the new *Violetta* in her first act is colourless. In her second and last one there are good moments—in the chamber-scene particularly some of her attitudes are natural and effective. Her acting is spoken of first because we think it better than her singing. It might have been expected that Mdle. Patti would make the most of her one opportunity of *bravura* in the first act; but she gave it feebly, without that sharply-cut accent

by which alone some semblance of character can be imparted to it. Much is said of the youthful promise of her voice. To our ears it is already worn and over-developed to a state when some months of complete rest might be judiciously afforded to it. As it stands, gain of volume would only lessen such charm as it possesses. But it is Utopian to fancy foresight in any one concerned strong enough to withdraw her from present triumphs for the sake of future ones. Mdle. Patti gave on Wednesday a welcome proof of her versatility by singing the verses of "God Save the Queen," with excellent spirit and neatness of pronunciation.

Mdle. Patti's *Zerlina* is also much admired. But to our thinking, the peculiar quality of her voice tells not pleasantly in Mozart's music. This day week the tones sounded more than usually fatigued and thin, although they had the advantage of being grouped with those of a voice beginning to depart in one of her playfellows, and in another with, possibly, the least attractive organ on the stage,—which, to boot, was out of order. The new *Zerlina* sang her duett and her two airs correctly, it is true; but without that mixture of simplicity, elegance and measurement, in right of which Sontag is to be recollected as the best singer of Mozart. "La ci darem," "Batti, batti," and "Vedrai carino" were *encored*, as is canonical; but, in spite of the high reputation of the new *Zerlina*, we believe that the *encores* might not have come to pass, had it not been for the warmth of M. Faure in the duett, and the assistant-singing of *Masetto's* byplay in the airs. Never was anything seen more originally comical than Signor Ronconi in this part on Saturday last. Mdle. Patti's acting was, in our opinion, too old and knowing. We cannot as yet disencumber ourselves from the impression, that there is something in her style of the phenomenon, from whose precocious talent there has passed away a bloom not to return. This is not in the tone of the hour, we are aware,—and shall be too glad if time bring with it cause for change of opinion.—As the young lady stands before the public, she is inevitably exposed to criticisms of a minuteness, which, to those who do not, or will not, think, may for the moment appear only so much cavilling.—She is, unquestionably, ready for various occupation, since to-night she is to appear in "Martha."

Owing to the departure of Mesdames Czillag and Miolan-Carvalho to fulfil Continental engagements, Madame Tiberini has been called on "the double debt to pay" caused by their absence, and has appeared as *Donna Elvira* in "Don Giovanni" and as the *Queen* in "Les Huguenots."

MUSICAL ART-UNION.—Eight years ago [*Athen.* No. 1329] the New Philharmonic Society did its taste and courage credit by bringing forward Cherubini's first "Requiem."—Of the impression made by it on every real lover of music, there could be no doubt. When we are all dead and buried, there is a chance of its being "discovered" by the sympathy of a general public more refined and thoughtful than ours of to-day. In the mean time, solemn and sublime as it is—the noblest "Requiem" in being—no choral society has reproduced it till the other evening, when the *Musical Art-Union* ventured the desperate deed, with an increase of recognition of its grandeur on the part of all who heard it for a second time,—with a new and deep pleasure for those who have been till now too exclusively disposed to consider Mozart's Swan-song as the Requiem of Requiems.—We pay dearly for our adoration of a few names in England when it can shut our hearts against such a work as Cherubini's. Without reprinting what was put forth on the occasion of its last performance, the *Athenæum* could hardly analyze this "Requiem" anew.—Suffice it then to assert, that nothing so superb, so devotional, so satisfying to the artist, of whatever school or creed he be, so sympathetic to the mourner, so unassailable by Time, exists in funeral music. We are satisfied that after a few repetitions it will assume its right proportions, and stand on its own colossal pedestal, even in the eyes of Protestant England. It is not possible for us to receive a deeper impression from Art than such as the hearing of yesterday week stamped anew.

The gravity, the pathos (not excluding variety), the science, as unforced as it is limitless, the thorough adaptation of sound to text and to purpose of this 'Requiem' must grow on every hearer. The *Musical Art-Union* deserves the warmest thanks and the most earnest support for assisting to make such a masterpiece known.—The 'Requiem,' on the whole, was very well performed. Some of the movements, however, were taken by Herr Klindworth, the intelligent conductor, as they were by Herr Lindpaintner in 1853, at too fierce a speed. The fugue *alla capella*, for instance, marked in the full score as *poco allegro*, which means "rather quick," yet metrized as 120 to the minim. These rival directions fly in the faces of the other; and every conductor (as his experience and musical sentiment prompt) should be encouraged in exercising private judgment in all such matters.

It was a mistake, after a performance in every respect so engrossing, to introduce two *solo* pieces, even though the one was as good as Beethoven's Romance in F, played by Mr. Blagrove, and the other, Mozart's *Cantata* (violin *obligato*), with no less clever a singer than Madame Lemmens-Sherington. There should have been a pause, and not a distraction, betwixt a work so splendid but not severe in its pomp as the 'Requiem,' and a piece of fantasy such as the absolute novelty of the evening, Herr Gade's *Cantata*, 'The Erl-King's Daughter.'

If contrast between the two main features of the concert was the desideratum, it could hardly have been more completely attained than by the introduction of the Danish composer's music in neighbourhood to Cherubini's. Of it, we can only speak, for the present, in general terms. Nothing more intensely Northern can be conceived than the legend of the ballad and the humour of its musical treatment. The tale of the knight, who, on the eve of his bridal, is lured back to Elf-land, by remembrance of what he saw on the haunted hill,—who only returns home to die in the morning light—is well known. When treated in a prolonged form, its supernatural ghastliness becomes monotonous; and we consider it, therefore, as difficult for musical illustration as the more tremendous 'Lenore' of Bürger. After such a perfect specimen of a ghost-ballad as Schubert's well-known song has been produced, it might have been more discreet in a younger composer to abstain from any other family subject of the kind. Herr Gade's tendencies, however, have always lain in the direction of a dreamland, lit up (if the fancy be permitted) by the pure and gleaming *Aurora Borealis*; and the prevalence of one tinge of colour in his music has stood betwixt him and the universal success to which one of such original and gracious genius might else have arrived in these days of famine. We prefer this composition to any others by Herr Gade with which we are acquainted; without any sacrifice of individual fantasy, his melody is in 'The Erl-King's Daughter' more distinct than is often the case with him. His writing for the voices is good—in the part-music especially so. A Morning-song is delightful by its simple breadth and tunefulness. In many of the numbers the musical four-line phrase is too often repeated, even though narration be the excuse; but the harmonized tune which opens and closes the legend is graceful and effective. The singers are the Death Spirit, "the Erl-King's Daughter," (*soprano*); the Knight's Mother, (*contralto*); and the Bridegroom Knight, (*basso*). The orchestra is richly and ingeniously handled, with a fair regard to variety. The *Cantata*, in brief, is one which we would gladly hear again, though its picturesque and refined beauty may not be appreciated as it deserves by our matter-of-fact audiences. On some future day, then, we may advert to certain details which set it above the generality of contemporary works. It was performed in a manner creditable to the young society. The *solo* parts were taken by Mesdames Lemmens-Sherington and Laura Baxter, and by Mr. Santley, who sang the principal part very finely.—This closes a first series of the most interesting orchestral concerts which we have lately attended.

MUSICAL AND DRAMATIC GOSSIP.—In continuation of the account of musical preparations for the Great Exhibition of 1862, it may be announced that Signor Costa has undertaken to conduct the performances, and that the Laureate has been applied to for the English poetry, which is to be set by the representative of England, whom we hope shortly to name. Matters, therefore, are in a fair state of advancement; it rests with those commissioned to prove themselves worthy of the occasion.

A great meeting of the Tonic Sol-fa Association will be held, on Wednesday next, at the Crystal Palace; numbering 4,500 voices of children. Another illustration of the vast and universal spread of the art will be found in the Report of the Anniversary of the Warehousemen and Clerks' Schools, at which the children took part, assisted by professional artists in a musical performance, as a close to the proceedings of the day. The cause, which we have at heart, moves, though with a capricious motion; and without, as yet, having enjoyed that substantial protection of 'late so liberally given to other arts in England,—shall we not say so immoderately?—when we find a vote of hundreds passed by Parliament for the concealment in a crypt of that abomination of taste—the Wellington Funeral-Car, which cost our Government thousands, and stuck fast on its way, thus nearly making one of the most solemn of modern obsequies absurd.—In pursuance of this argument let us again—though not for the last time—refer to another source of encouragement to Music irrationally closed, or only opened so as to serve nothing in the least worthy.—The bills of fare of an entertainment given the other evening by one of the City companies have fallen in our way. There were assembled some 300 dinner-guests; on whose entertainment, by "rich viands and the pleasurable wine"—as Coleridge hath it—to judge from the list of savouries and sweets, upwards of 1,000*l.* must have been expended. There was the usual amount of after-dinner music, opened by 'God Save the Queen' (which, we are invited to recollect, was composed for a City company). But this—one artist excepted—was not higher in tone or taste than the music and singing which every sixpenny frequenter of Canterbury Hall, or the Oxford, or Weston's, or Evans's can command. The concert cannot have cost so much as "a course":—and was made up of the most familiar dishes. Why then, let us once more ask, should not our munificent and hospitable citizens of London break new ground, and, at the sacrifice of a dinner—somewhat an everyday occurrence—illustrate their wealth and their welcome by a concert, by a commission for some new work, to some English composer?—As was said a week or two since, in reference to an entertainment in a private house in London, there is here neither lack of money to spend nor of will to spend it—on what is good—if that can be once pointed out. Thus, in the persistent humour of certain Parliament-men, who make a motion session after session, for some measure which they hope eventually to accomplish, do we repeat a past appeal to those who have genial humours and wealth which they are troubled to spend—the gentlemen presiding over the City companies—to make themselves famous, and surprise their guests by some novelty in the form of music.

One hundred and seventy public concerts, in ten weeks of six days each,—such, we are informed, are the statistics of two and a half musical calendar months of this year of grace 1861. The "gentle reader" will be glad to pause from even such selected accounts of these pleasures as the *Athenæum* has offered,—glad to learn that the lull is setting in.—Some of the last have been the sprightliest among the entertainments. Madame Rudersdorff treated her patrons and patronesses to two *opérettes* in English, at the Bijou Theatre. The first was Mr. Frederic Clay's 'Out of Sight':—concerning which private report has been busily favourable—and justly so. But the work is not one to present to a paying public, containing, as it does, many evidences of taste, invention and musical skill unaffectedly put forward: it is not strong enough to establish the repu-

tation of a composer. When will it be understood that an audience courteously desiring to be pleased, and an audience expecting its money's worth in the form of amusement, have bodies and souls as far apart as is Sympathy from Justice? Amateurs are too apt to live in a seventh heaven of private admiration, where truth can hardly reach them; and it is not till by appealing to a general public (no matter how reinforced by friends) they proclaim themselves no longer amateurs, that they have much chance of really testing the value of what they have made. Mr. Frederic Clay is too full of good musical matter to be spared one word of these old truths. If they sound hard, they are sound at heart,—as is his own music.

The engagements for the Birmingham Festival now completed are as under:—Principal vocalists, Mdlle. Tietjens, Madame Rudersdorff, Madame Lemmens-Sherington, Mdlle. Adelina Patti, Madame Sainton-Dolby and Miss Palmer; Mr. Sims Reeves, Mr. Montem Smith, Signor Giuglini, Mr. Santley and Signor Belletti. There is to be no instrumental *solo*; nor, so far as the skeleton programme given out informs us, any grand Symphony, at the two concerts of secular music. The omission of the latter no person need regret;—it being impossible to ensure a due execution (supposing the audience's attention engaged) from an orchestra worked by the production of such a quantity of grand and elaborate music as would fit out four German festivals at the very least. Mendelssohn's 'Lorely' *finale* and 'Midsummer Night's Dream' music will be produced at the evening concerts.—The Festival is to begin on the 27th of next month.

Mr. Mapleson's Italian Opera season at the Lyceum Theatre has closed. He states, in a farewell address, that its success justifies him in soon resuming the undertaking at some larger theatre.

The last,—a supplementary—part of 'Spohr's Autobiography,' completing the work, by the hands of a survivor, has just appeared.

The prizes for Part-songs offered by the choral societies of Paris have been adjudged on competition to MM. Daussougne Méhul (now a professor resident here), Léonce Cohen and Adolphe Blanc.—Sixteen new compositions (for male voices only, of course) have been sent to the committee of the monster meeting at Nuremberg about to take place by Herren F. Lachner, Hiller, Otto and Abt, among others.

MISCELLANEA

An Arab Newspaper.—As the *Athenæum* takes cognizance of literature and its progress in all parts of the world, it appeared to me that an Arabic newspaper, published at Beirout, in Syria, would merit your attention. This journal (of which by the kindness of the Royal Asiatic Society I have the number of the 7th of June now before me) is a weekly newspaper, which, in imitation of its European contemporaries, styles itself (*siyasi, edebi, mütterji*) political, moral and commercial, and is about the size of one of our local papers. The amateur of Oriental languages will be much amused to see how such words as subscription, advertisement, office, agents are expressed respectively by *ishtirak, ilan, mekteb* (a most appropriate word, corresponding exactly to the one adopted by the modern Greeks to express this idea, viz., *γραφειον*); and, lastly, agents by "those who write the names" (of subscribers) *chez eux*. Again, he will be struck by finding the first rude attempts at leading articles. In the number of last month, for example, there were articles on the Warlike Preparation in Europe, the American War, the Warsaw Massacres, &c.,—which, though weak compared to the articles in our newspapers, indicate a great step in advance. The very fact of their making this comparison, and their reflection on it, and their taking notice of the American affairs at all, is something for a nation whom many regard as complete barbarians. It is also somewhat curious to find the names of Lord John Russell and Mr. Griffith figuring in Arabic,—the latter asking the former why the Austrians have not withdrawn their troops on the frontiers of Italy. Garibaldi (whom they call *Jaribaldi*), the Emperor Napoleon (*Emberatur Nabulion*), and Victor Emmanuel (*Fiktor Imanuel*) may now see

their names in Arabic and their acts recounted for the edification of the Mussulmans. In the same manner the doings of Cardinal Antonelli and the Pope, the Massacres in Warsaw, the state of affairs in Naples, &c. are duly reported. Amongst the words I have noticed imported, coined, or adopted to express modern ideas are:—*Jurnal*, for newspaper,—*Mejlis-ul-umum*, for House of Commons,—*Reis-ul-Musheikha*, President of the Senate (in America),—*Fabor* or *Sefine bukhariye*, for steamer or steam-vessel,—and *Resail telegrafiye*, telegraphic despatches. The merchant may also learn that discount (*iskat*) at the Bank of England is at 6 per cent. (*fi el maye*), the Turkish loan at 73, and the state of the corn and silk markets. An advertisement, also, in one of the May numbers, which by the way had a conspicuous position and importance given to it, which its European brethren would much envy, stated that a certain Prof. Beters had adapted the wonderful tale of *Rubinnun Kruzi* (Robinson Crusoe) from the English language, and that the first part was just printed, price 22 grush. In the number of the 7th of June is seen, under the head "Home Intelligence," an account of the withdrawal of the French troops from Syria; and in one of the previous numbers a description of an asylum lately established for the widows and orphans of the sufferers in the massacres, and the Pasha's visit to it. The translation of the proclamation of the American President to the inhabitants of New York is also to be found in the number of the 30th of May. On the whole, the publication is exceedingly creditable, and may become a great instrument of civilization. The fact that it has been established four years speaks much for the possibility of introducing such Anglo-Oriental productions. It must be confessed, however, although not very creditable to us, that the French in this, as in all matters in the East, seem to have got far before us, and their influence, language and manners to have taken a deeper root than ours. There is every evidence of this paper being an imitation of a French one: they have adopted their word *journal*, although so chary of admitting any foreign word into the language,—coin their new words after French models,—and, in the French fashion, have a tale at the end, continued from number to number. In this tale is to be noted an immense improvement—the adoption of paragraphs. What may we expect after this! Perhaps a time may come when we may even have the Arabs punctuating!

CHARLES WELLS.

Criminal Returns.—The Criminal returns for England and Wales for the past year have just been published. They present the same favourable aspect as those for the preceding year, as they exhibit a decrease in crime, both among the class of grave, as well as of light offences. In the former the decrease during 1860, as compared with 1859, was 3·1 per cent., among the latter, 2·0 per cent. The total number of persons committed for grave crimes was 50,405—of these, 99 were for murders; 466 for shooting and wounding; 188 for manslaughter; 142 for unnatural offences. The total number of persons brought before magistrates during 1860 was 384,918, of whom 255,803 were convicted. An exception to the general decrease in offences appears under the head of game laws, the number of persons apprehended, during the past year, for poaching, &c. being 8,654, or 4·8 per cent. more than the number in 1859. As usual, the number of convictions among men considerably exceed those among women, 69·4 per cent. men having been convicted and 55·1 per cent. women. Of the 409,780 persons brought under legal jurisdiction during the past year, 187,574 persons are supposed to have been of previous good character, and 127,721 were known as criminals, or suspected by the police. Of bad characters at large the police make the following classification:—thieves, 37,914; receivers of stolen goods, 4,440; prostitutes, 30,800; vagrants and tramps, 22,664. The police force throughout England and Wales, during 1860, consisted of 20,760 officers and men, maintained at a cost of 1,531,111.

TO CORRESPONDENTS.—J. M.—A. J. D. D.—W. B.—E. Y.—L.—C. T.—G. S.—H.—received.

BOOKS FOR THE COUNTRY AND THE SEA-SIDE.

	PRICE	d.	s.
BIRDS' NESTS, with 22 Coloured Plates of Eggs. 16mo.	4	6	
BIRDS of the SEA-SHORE. Coloured Plates. 16mo. gilt	1	8	
BIRDS of the WOOD and FIELD. Edited by the Rev. C. A. JOHNS. In a Packet containing 15 Cards printed in Colours. Nos. 1 and 2.	1	0	
BOTANICAL RAMBLES. By the Rev. C. A. JOHNS. 16mo.	2	0	
BRITISH ANIMALS, Packet of. Containing 12 Cards printed in Colours.	1	0

London: BRADBURY & EVANS, 11, Bouverie-street, E.C.

NEW PUBLICATIONS.

I.

JAPAN, the AMOOR, and the

PACIFIC; with Notices of other Places comprised in a Voyage of Circumnavigation in the Imperial Corvette RYKOA in 1858-60. By HENRY ARTHUR TILLEY. With 8 Illustrations. Demy 8vo. Price 16s. cloth.

"Mr. Tilley describes everything in clear and simple language; moreover his accounts are remarkably correct, as we can testify in many instances from personal knowledge."—*Athenæum*.

"Mr. Tilley has turned his stay in Japanese towns to such advantage, that his account of their life and scenes is richer and fuller than any previously given to us, and will be read with extreme interest."—*London Review*.

"A lively and pleasant volume of travels. We commend it to the attention of the general reader who seeks information combined with amusement."—*Sun*.

"As a volume of general travels, this is both interesting and instructive."—*Critic*.

II.

HOUSEHOLD MEDICINE, and

SICK-ROOM GUIDE; describing DISEASES, their NATURE, CAUSES, and SYMPTOMS, the MOST APPROVED METHODS OF TREATMENT, and the PROPERTIES and USES of REMEDIES. By JOHN GARDNER, M.D., of the Royal College of Physicians, Edinburgh. With numerous Illustrations. Demy 8vo. Price 10s. 6d. cloth.

"This is a great improvement on any of the existing treatises on domestic medicine. It contains very minute directions as to the internal economy of the sick room, including several very simple and effective devices for promoting the patients' comfort; a clear description of the symptoms of all common diseases, and a statement of the mode of treatment proper to each, and a list of prescriptions in which the latest discoveries of medical science are carefully embodied."—*Spectator*.

"This is a very useful volume for any family to possess. It contains a vast and varied store of information on the topics to which it refers. Those who peruse this volume will find that it is one eminently calculated to be of general service, and that it conveys, in a concise and condensed form, some most important knowledge on matters that must engage the attention of all at some period of their lives, whether as regards themselves, or the members of their own immediate circle. And besides, it has the further advantage of being the work of an experienced practitioner."—*Sun*.

III.

IN-DOOR PLANTS, and HOW TO

GROW THEM, FOR THE DRAWING-ROOM, BALCONY, and GREENHOUSE; Containing clear Instructions by which Ladies may obtain, at a small expense, a Constant Supply of Flowers. By E. A. MALING. With Coloured Frontispiece. Fcap. 8vo. Price 2s. 6d. cloth.

"This little book may enable any lady in London to become her own flower-grower."—*Athenæum*.

"Any lady who has this work, however inexperienced she may be in the management of flowers, may, at a very moderate outlay of time and money, insure a constant supply of these most beautiful and effective ornaments for a drawing-room, and at the same time provide herself with a pleasant and profitable employment for her leisure hours."—*Spectator*.

"This elegant and useful little manual puts it in the power of everybody to acquire some knowledge of the proper management of plants in-doors."—*Critic*.

IV.

THE BOOK of GOOD COUNSELS:

Being an Abridged Translation of the Sanskrit Classic, the 'HITOPADESA.' By EDWIN ARNOLD, M.A., Author of 'Education in India,' &c. With Illustrations by Harrison Weir. Crown 8vo. Price 3s. cloth.

"This curious and interesting volume consists of a translation of a collection of Sanskrit fables, which are evolved one from another almost interminably. They are for the most part very ingenious, and we recognise among them several of the originals of those with which we are familiar in the works of Æsop, and other later fabulists."—*Spectator*.

V.

NEW NOVEL.

"WHO BREAKS—PAYS." By the

Author of 'Cousin Stella.' 3 vols. post 8vo.

"This story is a very charming and touching one. We recommend our readers to get the book for themselves."—*Athenæum*.

"The story is a very good one. The two chief characters are extremely well drawn. This novel, in fact, is one of the most natural books we have read for a long time; and it also possesses the unusual merit of dwelling upon strong passions, and painful circumstances, without being uncomfortably harrowing to the reader's sensibilities."—*Spectator*.

"We cannot refrain from expressing our surprise at the talent exhibited by the author of this book, in the construction of a very unpleasant plot, and the wonderful ability exhibited in making out of such materials a novel that is sure to become popular, and deserves to be universally read. The scenes of the tale are laid in Paris, England, and Italy, and all are portrayed by a master-hand."—*London Review*.

"Who Breaks—Pays' is a pretty tale of love and disappointment, ending in death and sorrow. It is not made too sad. The two volumes are graceful and feminine in the best sense of the latter adjective. The style has its salient points; it is lively, clear, and elegant. 'Who Breaks—Pays' should be a very successful novel."—*Globe*.

"The Author of 'Who Breaks—Pays' possesses both originality and artistic skill. We have seldom met with a more readable book than this. The various characters are developed with the skill and subtlety of a true artist."—*Press*.

SMITH, ELDER & Co. 65, Cornhill.

Just published, in small 8vo. a New and Revised Edition, illustrated with Fourteen Wood Engravings photographed from life, price 6s. cloth.

This day is published, 8vo. cloth, with Portrait, price 14s.

MEMOIR OF EDWARD FORBES, F.R.S.

Late Regius Professor of Natural History in the University of Edinburgh.

By GEORGE WILSON, M.D. F.R.S.E.

Late Regius Professor of Technology in the University of Edinburgh, and Director of the Industrial Museum of Scotland;

AND

ARCHIBALD GEIKIE, F.R.S.E. F.G.S.

Of the Geological Survey of Great Britain.

LITERARY GAZETTE, June 15, 1861.

"We welcome this volume as a graceful tribute to the memory of as gifted, tender, generous a soul as Science has ever reared, and prematurely lost."

EXAMINER, June 22, 1861.

"It is long since a better memoir than this, as regards either subject or handling, has come under our notice... The first nine chapters retain all the charming grace of style which marked everything of Wilson's; and the author of the latter two-thirds of the memoir deserves very high praise for the skill he has used, and the kindly spirit he has shown. From the first page to the last the book claims careful reading, as being a full but not over-crowded rehearsal of a most instructive life, and the true picture of a mind that was rare in strength and beauty."

THE PRESS, June 29, 1861.

"The story of his life, as told in this memoir, is full of interest. The first six chapters appear as they were left by Dr. Wilson; and nothing could be better than the manner in which Mr. Geikie has acquitted himself of his task. His chapters are chatty, anecdotal, and full of entertaining matter, clothed in an easy agreeable style. In his company we follow the naturalist in all his wanderings..... We have no doubt the memoir will be a favourite one with a numerous class of readers."

MACMILLAN & Co. London and Cambridge.

Now ready, Cheap Edition, post 8vo. 1 vol. 5s.

THE WEDDING GUESTS.

By MARY C. HUME.

London: F. Pitman, 20, Paternoster-row, E.C.

CHAPMAN & HALL, 193, Piccadilly.

UNITED KINGDOM LIFE ASSURANCE COMPANY,

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.

CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1859, amounted to £690,140 19s., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory; and while we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent injections.

ICELAND SPAR.

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPIES.

GORHAM'S KALEIDOSCOPIIC COLOUR TOP, &c.

Catalogues, giving full particulars, may be had on application, or sent post free.

SMITH, BECK & BECK,

GOVERNMENT SECURITY LIFE POLICIES. THE CONSOLS ASSOCIATION,

430, STRAND, LONDON.
1. Provides the Security of Consols for its Policies.
2. It lends, or returns to Insurers ON DEMAND at any time, about One-Half of all Premiums paid.
Undoubted Security for Money, with a liberal Rate of Interest.
The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
Full information may be obtained on application to
THOMAS H. BAYLIS, Managing Director.

LIFE ASSURANCE.—Special Notice.—The next investigation into the Profits of the Life Department of the SCOTTISH UNION INSURANCE COMPANY will be made as at 1st August, 1861, and parties taking out Policies before that date will participate in the Division.
685 new Policies, for 304,702*l.*, yielding 9,388*l.* 6*s.* 3*d.* of new Premiums, were issued during the year ending 1st August, 1860.
Thirty days' grace allowed to renew Life Insurances, and 15 days to renew Fire Insurances, and parties taking out Policies on payment of the premium, the Company hold themselves liable.
No extra Premium charged for Members of Volunteer or Rifle Corps within the United Kingdom.

LONDON BOARD.

President.—The Right Hon. the EARL of MANSFIELD.

Directors.

P. Anstruther, Esq. H. M. Kemahead, Esq.
Charles Balfour, Esq. John Kingston, Esq.
Robert Collum, Esq. M.D. R. Robertson, Esq.
J. E. Goodhart, Esq. Hugh F. Sandeman, Esq.
George Ramsay, Esq., Manager.

Secretary.—F. G. Smith, Esq.

Surgeon.—E. W. Duffin, M.D.

Solicitors.—Messrs. Olivers, Lavin & Peachey.
A copy of the last Report, Forms of Proposals, and Prospectuses, may be had at the Office, 37, Cornhill, London; and of the Agents throughout the Kingdom.

FREDK. G. SMITH, Secretary to the London Board.
No. 37, Cornhill, London.

FREE ASSURANCE.

THE POLICIES OF THE

STANDARD LIFE ASSURANCE COMPANY are relieved from all Restrictions as to Residence Abroad (except in special cases); and they are otherwise so framed as to afford the most complete security in connexion with Family Provisions, Marriage Settlements, Loan Transactions, and the various other purposes in connexion with which the protection of Life Assurance is sought.

THE

STANDARD LIFE ASSURANCE COMPANY was established in 1835, and during the last fourteen years, the annual Average of New Insurances has exceeded Half-a-Million sterling, being the largest business transacted in that period by any Life Assurance Office. The New Insurances effected in 1860 alone were upwards of 700,000*l.* The business is a purely home business, the Company having no Offices out of the United Kingdom.

Accumulated Fund.....£1,856,802 19 4
Annual Revenue.....£304,161 13 7

THE SIXTH DIVISION OF PROFITS was made on 9th May last, when it was reported that the Bonus Additions were at the rate of 150 per cent. on the sum assured on Policies effected in 1835; 100 per cent. on Policies effected in 1831; and 50 per cent. on Policies effected in 1840. Next Division of Profits in 1860.

THE INVESTIGATION REPORT, showing these important advantages, is now ready, and may be had at the Office, or Agents of the Company.

WILL. THOS. THOMSON, Manager.

H. JONES WILLIAMS, Resident Secretary.

London.....88, King William-street.
Edinburgh.....3, George-street (Head Office).
Dublin.....56, Upper Sackville-street.
Glasgow.....35, St. Vincent-place.

NORTH BRITISH INSURANCE COMPANY, 1809.

Incorporated by Royal Charter and Act of Parliament.

Policies opened during the current year will be entitled at next Division of Profits, in December, 1862, to rank for Five Years' Bonus, which at last investigation ranged from 35*s.* to 35*s.* per cent. per annum on the sums assured, and it is expected that the great improvement in the business of the Company of late years will beneficially affect the forthcoming one, 741 New Policies for 475,698*l.* having been opened last year.

HEAD-OFFICE—64, Princes-street, Edinburgh.

LONDON BOARD—Office, 4, New Bank Buildings, Lothbury.

SIR PETER LAURIE, Chairman.

JOHN I. GLENNIE, Esq., Deputy-Chairman.

William Borradaile, Esq. P. Northall Laurie, Esq.
John Connell, Esq. Charles J. Knowles, Esq.
Archibald Cockburn, Esq. Peter J. T. Pearce, Esq.

The attention of those about to assure is specially directed to some New Tables of Premiums recently constructed for this Company, which, with Forms of Proposals, &c., may be had as above, or will be forwarded free on application.

ROBERT STRACHAN, Secretary.

ESTABLISHED 1837.

BRITANNIA LIFE ASSURANCE COMPANY,

Empowered by Special Act of Parliament, 4 Vict. cap. 9;

AND

BRITANNIA MUTUAL LIFE ASSOCIATION.

Empowered by Her Majesty's Royal Letters Patent.

1, PRINCES-STREET, Bank, London.

Major-General ALEXANDER, Blackheath Park, Chairman.

Every description of Life Assurance business transacted, with or without Participation in Profits.

Extracts from Tables.

ANDREW FRANCIS, Secretary.

ENGLISH AND IRISH CHURCH AND UNIVERSITY LIFE ASSURANCE SOCIETY.

HEAD OFFICE—345, STRAND, LONDON, W.C.

Incorporated by Act of Parliament.

Subscribed Capital, £100,000.

Clergymen, Ministers of all Denominations, and Members of the University assured at lower rates than the public generally.
For a small extra Premium payment of a Policy may be secured during life on the assured becoming totally disabled from following his ordinary avocation by Paralysis, Blindness, Insanity, or any accident.

At the Annual Meeting of Shareholders on the 27th May, 1861, the Directors reported the receipt since the Meeting held last year of 739 proposals to assure 173,700*l.*; of these 538 had been completed, and the Society's Policies issued for the same, assuring 127,938*l.*, and yielding an annual income of 4,131*l.* 11*s.* 1*d.* Thirty-seven had been declined, and 174 were either under consideration, awaiting completion, or had not been carried out.
Prospectuses and every information may be had on application to
JOHN SHERIDAN, Manager.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution.

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE.

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED.....	£14,821,734
2. TOTAL BONUSES DECLARED.....	3,033,049
3. SUMS ASSURED AND BONUSES EXISTING.....	10,896,801
4. TOTAL CLAIMS PAID EXCEEDED.....	3,600,000
5. INVESTED FUNDS.....	3,001,764
6. ANNUAL REVENUE.....	435,738

Forms of Proposal, detailed Prospectuses and Reports, and every information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALPH, Manager.
J. J. P. ANDERSON, Secretary.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of the Society's Agents, during the current year, will secure One Bonus more than those of later date.

MUTUAL ASSURANCE WITHOUT INDIVIDUAL LIABILITY.

Extracts from the Report of the Directors for the Year 1860:—

Number of new Policies issued during the year, 938.	
Assuring the sum of.....	£481,231 10
Producing an Annual Income of.....	16,053 15 7
Making the Total Annual Income, after deducting 50,112 <i>l.</i> annual abatement in Premium.....	298,251 10 4
Total number of Policies issued, 33,573.	
Amount paid in Claims by the decease of Members, from the commencement of the Institution in December, 1835.....	1,034,368 5 4
Amount of Accumulated Fund.....	1,896,895 14 11

The effect of the successful operation of the Society during the whole period of its existence may be best exhibited by recapitulating the declared surpluses at the four investigations made up to this time.

For the 7 years ending 1849 the Surplus was.....	£32,074 11 5
.. 5 years .. 1847	56,132 8 3
.. 5 years .. 1845	223,061 18 4
.. 5 years .. 1843	245,034 3 11

The next Division of Profits will be made up to the 30th of November, 1862. Policies effected prior to that date, if subsisting at the time of division, will participate in such profit for the time they may have been in force.

The Prospectus, with the last Report of the Directors, and with Illustrations of the profits for the five years ending the 30th November, 1857, may be had on application, by which it will be seen that the reductions on the premiums range from 11 per cent. to 98 per cent., and that in one instance the premium is extinct. Instances of the bonuses are also shown.

Members whose premiums fall due on the 1st of JULY are reminded that the same must be paid within thirty days from that date.

JOSEPH MARSH, Secretary.

ACCIDENTS OF ALL KINDS,

AND FROM ANY CAUSE, may be provided against by an Annual Payment of 2*l.* to the RAILWAY PASSENGERS' ASSURANCE COMPANY, which secures 1,000*l.* at death by Accident, or 5*l.* weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.
ONE PERSON in every TWELVE insured is injured yearly by ACCIDENT.

75,000*l.* has been already PAID as COMPENSATION.
For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 3, Old Broad-street).

ANNUAL INCOME, 40,000*l.*

CAPITAL, ONE MILLION.

WILLIAM J. VIAN, Secretary.

64, Cornhill, E.C., January, 1861.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and Maker of the Great Clock for the Houses of Parliament, 61, Strand, and 24, Royal Exchange.

 saving in labour and time, and the improvement in the appearance
 of lawns effected, by these Machines, will be forwarded, post free,
 with Price-List, on receipt of application.

B. SAMUELSON, BRITANNIA WORKS, BANBURY.
 LONDON WAREHOUSE: 175, CANNON-STREET WEST, CITY.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is
 allowed by upwards of 200 Medical Gentlemen to be the most
 effective invention in the curative treatment of HERNIA. The
 use of a steel spring, so often hurtful in its effects, is here avoided:
 a soft bandage being worn round the body, while the regulate
 resisting power is supplied by the MOC-MAIN PAD and PATENT
 LEVER, fitting with so much ease and closeness that it cannot be
 detected, and may be worn during sleep. A descriptive circular
 may be had, and the truss (which cannot fail to be) forwarded by
 post, on the circumference of the body, two inches below the hips,
 being sent to the Manufacturer.

MR. WHITE, 288, PICCADILLY, LONDON.

ELASTIC STOCKINGS, KNEE-CAPS, &c.

PARTRIDGE & COZENS,
 1, CHANCERY-LANE, and 129, FLEET-STREET, E.C.

LE SOMMIER ELASTIQUE PORTATIF.
 HEAL & SON have patented a method of making a Spring
 Mattress. The great advantage to the usual Spring
 Mattress is its being so heavy and cumbersome. The "Sommier
 Elastique Portatif" is made in three separate parts; and, when
 joined together, has all the elasticity of the best Spring Mattress.
 As it has no stuffing of wool or horse-hair it cannot harbour
 moth, to which the usual Spring Mattress is very liable; the
 price, also, are much below those of the best Spring Mattresses,
 viz.:—
 3 ft. wide by 6 ft. 4 in. long 25 0
 3 ft. 6 in. " " 30 0
 4 ft. " " " 35 0
 4 ft. 6 in. by 6 ft. 4 in. long 30 0
 5 ft. " " " 35 0
 5 ft. 6 in. " " 40 0

The "Sommier Elastique Portatif" therefore, combines the
 advantages of elasticity, durability, cleanliness, portability and
 cheapness.

An ILLUSTRATED CATALOGUE of Bedsteads, Bedding
 and Bed-Room Furniture sent free by post on application.
HEAL & SON, 129, Tottenham Court-road, W.

BATHS and TOILETTE WARE.—WILLIAM
 S. BURTON has One Large Show-room devoted exclusively

 4, 5 and 6, Perry's-place; and 1, Newman-mews, London.

DURABILITY OF GUTTA-PERCHA
 TUBING.—Many inquiries having been made as to the
 Durability of Gutta-Percha Tubing, the Gutta-Percha Company
 have pleasure in giving publicity to the following letter:—From
 SIR RAYMOND J. JARVIS, Bart., VENTNOR, Isle of Wight.—
 Second Testimonial.—March 10th, 1861.—In reply to your letter,
 received this morning, respecting the Gutta-Percha Tubing for
 Pump Service, I can state with much satisfaction, it answers
 perfectly. Many builders, and other persons, have lately exam-
 ined it, and there is not the least apparent difference since the
 first time I put it into use, now several years ago. I am informed that
 it is to be adopted generally in the houses that are being erected
 here.—N.B. From this Testimonial it will be seen that the
 CORROSIVE WATER of the ISLE of WIGHT has no effect on
 Gutta-Percha Tubing.

THE GUTTA-PERCHA COMPANY, PATENTEES,
 18, WEAR-ROAD, CITY-ROAD, LONDON.

TEETH.—By her Majesty's Royal Letters
 Patent.—Newly-invented Application of Chemically Pre-
 pared India-rubber in the construction of Artificial Teeth, Gums,
 and Palates.—Mr. EPHRAIM MOSELY, Surgeon-Dentist, sole
 inventor and patentee.—A new, original, and invaluable invention
 consisting in the adaptation, with the most absolute perfection
 and success, of CHEMICALLY PREPARED INDIA-RUB-
 BER, as a lining to the gold or bone frame.—All sharp edges are
 avoided: no spring wires or fastenings are required: a greatly
 increased freedom of suction is supplied: a natural elasticity,
 hitherto wholly unattainable, and a fit, perfected with the most
 unerring accuracy, are secured: while from the softness and
 flexibility of the accreted employed, the greatest support is given to
 the adjoining teeth when loose or rendered tender by the absorp-
 tion of the gums.—To be obtained only at 9, Lower Grosvenor-
 street, Grosvenor-square, London, W.

MALVERN POTASH WATER
 Owing its great excellence to the purity of the
 HOLY WELL WATER, with which it is made.

Preferred to Soda Water as a refreshing Draught, and valuable as
 a corrective for

ACIDITY, HEARTBURN, HEADACHE, GOUT, &c.
 May be drunk freely by the most delicate with advantage to the
 general health.

Apply to **W. & J. BURROW, Great Malvern.**
 Sole Local Agents for J. SCHWEPPE & CO.'S
 SELTZER, VICHY, SODA, and LITHIA WATERS;
 And Sole Proprietors of
 "BURROW'S TARAXACUM" for Liver Complaints.

RIMMEL'S TOILET VINEGAR will be
 found a perfect Toilet this Weather, either used for the
 Toilet or as a reviving Scent for the Handkerchief. A
 special, unflattering sort is prepared to be used in Rimmel's
 Patent Vaporizer for purifying the air and fumigating sick rooms.
 —RIMMEL, Perfumer, 66, Strand, and 24, Cornhill.

HAIR RESTORED,
 PRESERVED and BEAUTIFIED by the Use of
ROWLANDS' MACASSAR OIL.
 This Elegant and Fragrant Oil is universally in high esteem
 for its wonderfully nourishing properties. For children it is
 especially recommended, as forming the basis of a beautiful head
 of hair, while its use is a sure means of restoring the hair, and the
 numerous testimonials constantly received in its efficacy, afford
 the best and surest proofs of its merits.—Price 2s. 6d., 7s., 10s. 6d.
 (equal to four small), and 12s. per bottle. Sold at 30, Hatton-
 garden, and by Chemists and Perfumers.
 * * * Ask for "ROWLANDS' MACASSAR OIL."

DR. DE JONGH'S
 (Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL,
 Prescribed by the most Eminent Medical Men as the
 safest, speediest and most effectual remedy for
 CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS,
 RHEUMATISM, GENERAL DEBILITY, DISEASES OF
 THE SKIN, RICKETS, INFANTILE WASTING,
 AND ALL SCROFULOUS AFFECTIONS.
 IS UNCOMPARABLY SUPERIOR TO EVERY OTHER KIND.

Opinion of CHAS. COWAN, Esq. M.D. L.R.C.S.E.,
 Senior Physician to the Royal Berkshire Hospital, &c. &c.
 "A tendency to prefer a colourless and tasteless Oil, if not coun-
 teracted, will ultimately jeopardise the reputation of an unques-
 tionably valuable addition to the Materia Medica. Dr. Cowan
 wishes Dr. de Jongh every success in his meritorious under-
 taking."

Sold ONLY in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.;
 Quarts, 8s., in capsules and labelled with DR. DE JONGH'S
 stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE
 GENUINE, by respectable Chemists and Druggists.

SOLE COWENERS:
ANSAR, HARFORD & CO. 77, STRAND, LONDON, W.C.

DINNEFORD'S PURE FLUID MAGNESIA
 has been, during twenty-five years, emphatically sanctioned
 by the Medical Profession and universally accepted by the Public,
 as the Best Remedy for acidity of the stomach, heartburn, head-
 ache, gout and indigestion, and as a mild aperient for delicate
 constitutions, more especially for Ladies and Children. Combined
 with the Acidulated Lemon Syrup, it forms an agreeable
 Efferescent Draught, in which its Astringent qualities are much
 increased. During Hot Seasons and in Hot Climates, the
 regular use of this simple and elegant remedy has been found
 highly beneficial. Manufactured with the utmost attention to
 strength and purity by DINNEFORD & CO. 179, New Bond-
 street, London; and sold by all respectable Chemists throughout
 the Empire.

NO MORE PILLS NOR ANY OTHER
 MEDICINE.—"We find DU BARRY'S HEALTH
 RESTORING REVALENTA ARABICA FOOD the safest
 remedy for habitual constipation, indigestion (dyspepsia), palpi-
 tation, coughs, colds, asthma, bronchitis, consumption, diarrhoea,
 nervousness, biliousness, torpidity of the liver, &c."—And
 Ure, M.D. F.R.S., Dr. Harvey, Dr. Shorland, Dr. Campbell, Dr.
 Wurzer's Testimonial:—"Bonn, July 19, 1853. Du Barry's Food
 is particularly effective in effectually curing indigestion (dys-
 pepsia), heartburn, acidity of the body, and pain in diarrhoea, bowel
 and liver complaints, inflammatory irritation and cramp of the
 urethra, the kidneys and bladder, and hemorrhoids; also in
 cough, asthma, debility, bronchitis, and pulmonary and bron-
 chial consumption."—Dr. Rud. Wurzer, Professor of Medicine and
 Practical M.D. in Bonn. Packed in tins, with full instructions,
 1lb. 2s. 6d.; 5lb. 12s. 6d.; 5lb. 12s. 6d.; 10lb. 24s. 6d., free of
 carriage, &c.—Du Barry & Co., 77, Regent-street, London;
 Fortnum & Mason; also at 60, Gracechurch-street; 4, Cheap-
 side; 63 and 150, Oxford-street; 229, 230, 430 and 451, Strand; and
 all Grocers.

BLAIR'S GOUT AND RHEUMATIC PILLS.

Price 1s. 1d. and 2s. 9d. per box.
 This Preparation is one of the benefits which the Science of
 Modern Chemistry has conferred upon Mankind; for, during the
 first twenty years of the present century, to speak of a Cure for
 the Gout was considered a romance; but now the efficacy and
 safety of this Medicine are so fully demonstrated, by unselected
 testimonials from persons in every rank of life, that Public
 Opinion proclaims this as one of the most important Discoveries
 of the Present Age.

These Pills require no restraint of diet or confinement during
 their use, and are certain to prevent the disease attacking any
 vital part.

Sold by all Medicine Vendors, and at 229, Strand, London.

COCKLE'S PILLS.—To those who
 suffer from Indigestion and Sick Headache, Torpid Liver,
 Inactive Bowels, &c., COCKLE'S ANTIBILIOUS PILLS are
 strongly recommended, as, by combining aromatic, tonic, and
 aperient properties, they remove all oppressive accumulations,
 strengthen the stomach, induce a healthy appetite, and impart
 tranquillity to the nervous system. Prepared only by James
 Cockle, 15, New Ormond-street; and to be had of all Medicine
 Vendors, in boxes, at 1s. 1d., 2s. 9d., 4s. 6d. and 11s. each.

AGREEABLE MEDICINE.
 Doctors seldom make Medicine agreeable, which will
 account for the fact that

PARR'S LIFE PILLS,
 which are pleasant to take, have got into such general use.

They clear from the Body all harmful impurities, improve
 the DIGESTIVE POWERS, speedily cure all LIVER COM-
 PLAINTS, BILIOUS AFFECTIONS, SKIN ERUPTIONS,
 LOWNESS OF SPIRITS, HEADACHE, CONSTIPATION,
 GOUT, LUMBAGO, &c.

* * * ASK FOR PARR'S LIFE PILLS.
 In Boxes, price 1s. 1d., 2s. 9d., and in Family Packets, 11s.
 each. Sold by all Chemists and Medicine Vendors.

For EXPORTATION—Directions in Spanish, Portuguese, French
 and English, are folded round each Box.

Sole Proprietors,
T. ROBERTS & CO.,
 8, Crane-court, Fleet-street, London.

HOLLOWAY'S PILLS.—These Pills are more
 efficacious in strengthening a debilitated constitution than
 any other medicine in the world. Persons of a nervous habit of
 body, and all who are suffering from weak digestive organs, or
 whose blood is impure, or who are afflicted with bilious affections,
 disordered stomach, or liver complaints, should lose no time in
 giving these admirable Pills a fair trial. Coughs, colds, asthma,
 or shortness of breath, are also within the range of the sanative
 powers of this very remarkable medicine. The cure effected by
 these Pills is not superficial or temporary, but complete and
 permanent. They are as mild as they are efficacious, and may be
 given with confidence to delicate females and young children.

CHARLES MACKAY'S NEW MAGAZINE, EVERY WEEK, TWOPENCE.

"I DESCRIBE EACH THING THAT'S DONE BELOW THE MOON."—Ben Jonson's *Robin Goodfellow*.

"ROBIN GOODFELLOW."

A WEEKLY JOURNAL OF FACT AND FICTION.

Conducted by CHARLES MACKAY.

Published every SATURDAY MORNING, price Twopence.

Another new Journal! Why not? The world is wide—and there is room enough for every one to elbow his way to the platform, where he may address the people; certain of an audience, if he can speak common sense in good English, and keep them in good humour. This is what the Editor and Contributors of "ROBIN GOODFELLOW" aspire to do. They will avoid all politics—all controversies—and all acerbities; and strive to provide for the recreation and instruction of their readers, the best Novels and Tales—the ablest social Essays—the raciest and most truthful Sketches of Life and Manners that the Literature of the age can produce, or that the money of the Proprietors can purchase. Like that "shrewd sprite" honourably mentioned by Shakspeare, Ben Jonson and Milton, from whom the new Journal has borrowed its name, "ROBIN GOODFELLOW" will not

invariably confine himself to the amusement of his readers, but, upon occasion, will turn his hand to useful work. Though, as Shakspeare informs us, Robin Goodfellow could sport, he could, also, do hard work in case of necessity; and, as Ben Jonson states, "would card wool," "grind at the mill," "dress hemp," "spin tow," and perform other useful functions for the benefit of ignorant or indolent humanity, whenever he was in the humour. And our new "ROBIN GOODFELLOW" will, in this respect, imitate the example of his namesake, and aid, wherever he can, the cause that needs help, without ever losing sight of his other function of telling the tale, and singing the song, and being the genial and welcome friend at the fireside or study of every family in the Kingdom.

"ROBIN GOODFELLOW"

Will be published EVERY SATURDAY, price Twopence, at the Office, 129, Fleet-street, London, E.C., where all Letters and Communications for the Editor are requested to be addressed.

Contents of Nos. I. and II., published July 6 and 13, price Twopence each.

THE HOME TUTOR.

A TREASURY OF USEFUL KNOWLEDGE, embracing Plain and Practical Treatises on all Subjects that interest Youthful Enquirers as well as the partially-educated Student. The whole being designed to stimulate Self-Culture, expand the Mind, and assist Parents in the arduous Duties of Home Education. This compendious work is most carefully prepared for publication, by writers of the highest eminence in the different departments of knowledge within its scope.

EXTRACT from PREFACE:—There are branches of knowledge which we believe may be better acquired from a silent teacher in a pleasing book than in any more formal way. John Knox was of opinion that there ought to be a school in every parish, a grammar-school in every borough, a college "in every city"; so, we would add, there ought to be a 'HOME TUTOR' in every family. A book can be listened to or not, at will. Its instructions are not forced, therefore the more agreeable.

London: WARD & LOCK, 158, Fleet-street; and all Booksellers.

EDITED BY G. A. SALA.

This day, price 5s. 6d. Vol. II. pp. 576; also Binding-cases, price 1s. each,

QUANTITY, QUALITY, AND CHEAPNESS.

NEW MAGAZINE, SIXPENCE MONTHLY.

THE SIXPENNY MAGAZINE.

PROFUSELY ILLUSTRATED.

The removal of the Duty on Paper creates a new era in Literature: it compels cheapness; and it enables the combination of quality with quantity. Hence, the new SIXPENNY MAGAZINE will be the cheapest Monthly Periodical ever attempted. It will be equal, in the quantity of its matter and in the quality of its contents, to any Magazine, however costly; while in purity of tone, vigour of expression, and general scope, the SIXPENNY MAGAZINE will be the very best Monthly Magazine of the day.

CONTENTS of No. I. ready JULY 1.

1. THE AMERICAN DISUNION.
2. MASTERS AND SERVANTS.

The same series of attractions will be presented, commencing with the Juvenile Entertainments from half-past 5 to 7 o'clock, the General Entertainments from 8 to 12. Family Juvenile Tickets, admitting Four at Half-price. A List of the Ladies' Patronesses may be obtained at Mr. Mitchell's Library.

ST. MATTHEW'S CHURCH, OAKLEY- SQUARE, ST. PANCRAS.

NORTH LONDON or UNIVERSITY COLLEGE HOSPITAL.

The Right Hon. and Right Rev. the LORD BISHOP of LONDON will preach a SERMON at the above Church in aid of this Charity on SUNDAY NEXT, July 21. Divine Service will commence at 11 o'clock.

1,267 In-Patients were admitted into the Hospital during the year 1860; of these 806 were from the Parish of St. Pancras, and 571 from all other parishes.

5,331 Out-Patients were admitted during the same year: 4,613 were from the Parish of St. Pancras, and 818 from all other parishes.

791 Ophthalmic cases, and 11,700 cases of Camaltia were relieved in 1860, at least three-fourths were from the Parish of St. Pancras.

647 Lying-In Women were attended at their own habitations; 588 were from the Parish of St. Pancras, and 84 from all other parishes. This Hospital has been open 32 years, during which period 23,055 In-Patients, 356,431 Out-Patients, 13,178 Lying-In Women, and in the last twelve years of the term 9,635 Ophthalmic Patients have experienced the benefits of the establishment.

In the seven months now elapsed of the current financial year the Receipts have been about 2,700, including 622, Annual Subscriptions and 1,547, Students' Fees. These sources, from which the ordinary revenue of the Hospital is mainly derived, are nearly exhausted, while the annual expenditure under recent arrangements for improving the nursing, for the treatment of special diseases, for beds, and for providing an increase in the number of patients, amounts to at least 5,500.

Subscriptions and Donations will be thankfully received in the Vestry-room of the Church after Divine Service; and by the following Bankers—Messrs. Coutts & Co. 59, Strand; The London and Westminster Bank, Bloomsbury Square; Sir Scott & Co. Cavendish-square; and Messrs. Smith, Payne & Co. 1, Lombard-street.

EDUCATION in GERMANY.—CANN-

STATT, near Stuttgart, one of the finest and healthiest places in Germany (30 hours from London).—Prof. HIRSCH, whose Establishment is highly recommended by the Rev. James Hamilton, D.D., of Regent-square, and the Rev. Newman Macleod, D.D., of Glasgow, as well as by all the Gentlemen whose sons have been under Prof. Hirsch's care, has some VACANCIES at present. The Instruction comprises chiefly the Modern Languages, Arithmetic, Latin, Mathematics in all its branches, Geography, and History. Sons of Gentlemen only are received. The Quarter begins with the Entrance of the Pupil.—For further information and Prospectuses apply to Prof. Hirsch, Cannstatt-on-the-Neckar; or to Mr. Cortz, 130, Cheap-side, E.C., London.

EDUCATION.—A Lady, who has been for

upwards of twenty years engaged in Tuition, and who resides in a Cathedral and Collegiate City presenting peculiar facilities for instruction by the ablest Professors, RECEIVES a limited number of YOUNG LADIES. The Course of Instruction comprises, in addition to the usual branches of General Education, French, German, Italian, Latin, Music, Singing, Drawing, Painting, Dancing and Calligraphic Exercises.

The Domestic arrangements combine the ease and comfort of a Home with the advantages of a School.—Prof. HIRSCH, whose Establishment is highly recommended by the Rev. James Hamilton, D.D., of Regent-square, and the Rev. Newman Macleod, D.D., of Glasgow, as well as by all the Gentlemen whose sons have been under Prof. Hirsch's care, has some VACANCIES at present. The Instruction comprises chiefly the Modern Languages, Arithmetic, Latin, Mathematics in all its branches, Geography, and History. Sons of Gentlemen only are received. The Quarter begins with the Entrance of the Pupil.—For further information and Prospectuses apply to Prof. Hirsch, Cannstatt-on-the-Neckar; or to Mr. Cortz, 130, Cheap-side, E.C., London.

COMMUNICATIONS, addressed to A. B. C., No. 4, Cannonbury-lane,

Cannonbury-square, London, N., will receive prompt attention.

NAUTICAL EDUCATION.—SCHOOL

FRIGATE, "CONWAY," LIVERPOOL.

Capt. ALFRED ROYER, R.N., Commander.

THOMAS DOBSON, Esq., B.A., Head-Master.

The next Session of this Institution, established to afford, at moderate expense, a sound Education and practical Nautical Instruction to Boys intended for Officers in the Merchant Navy, will COMMENCE on the 1st of August.

His Grace the Duke of Somerset and Rear-Admiral Lord Clarence Paget each give a Naval Cadetship next Christmas, to be competed for by the Boys.

Many of the leading Shipowners of Liverpool have agreed to take the Cadets from the "Conway" as Apprentices free of premium.

Terms, 35 Guinea per annum. Applications to be addressed to the Commander of the "Conway," Roek Ferry, Birkenhead; or to B. J. THOMSON, Secretary, 4, Chapel-street, Liverpool.

GERMAN, French, Italian.—Dr. ALTSCHUL,

Author of "First German Reading-Book," (dedicated to Her Grace the Duchess of Sutherland,) &c., &c. Philolog. Soc., Prof. Education.—TWO LANGUAGES TAUGHT at the same Lesson, or alternately, on the same Terms as One, at the pupils' or at his house. Each language spoken in his PRIVATE Lessons, and select CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.—6, OLD BOND-STREET, PICCADILLY.

TRAVELLING or RESIDENT GERMAN

and FRENCH TUTOR, or SECRETARY.—A young Englishman (late Tutor to H.R.H. Prince Julius of Schleswig-Holstein, at Düsseldorf) DESIRES a TEMPORARY ENGAGEMENT in the family of a nobleman or gentleman. Would like to travel, particularly in Italy. German and French thoroughly, and some knowledge of Italian, Polish, and Drawing. Excellent references.—Address F. C., Poste-restante, Rochester.

PROFESSOR GARDNER, F.E.S., &c., begs

to state that his LECTURES on the EXPERIMENTAL SCIENCES, fitted for gentlemen preparing for the Government and other Examinations, are now conducted at the Polytechnic Institution. The Apparatus of this Establishment, conjoined to his own, gives facilities seldom afforded. Engagements for the same Courses of Lectures are made with Private Establishments, Institutions, &c. The Laboratory, under the direction of Professor Gardner, is open for Pupils. Private Study, Analyses, &c.—309, Regent-street, W.

THE GOVERNESSES' INSTITUTION, 34,

SOHO-SQUARE.—MRS. WACHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools, to her REGISTER of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

NOTICE.—TO TOURISTS.—BLACK'S

GUIDE-BOOKS and TRAVELLING MAPS, last Editions, will be found to contain all the most recent and useful information for travelling in this country.—London: SMITH & Son, 133, Strand; and sold by all Booksellers.

NOTICE.—CRYSTAL PALACE, DUL-

WICH, KEW, RICHMOND, &c.—Just published, price 5s., with Map and Illustrations, BLACK'S GUIDE to SURREY, containing Descriptions of the above and every other place of interest.—SMITH & Son, Strand; and all Booksellers.

CRYSTAL PALACE.—GREAT BRASS BAND CONTEST.—THE SECOND NATIONAL BRASS BAND CONTEST will be held at the Crystal Palace on TUESDAY and THURSDAY NEXT, the 23rd and 24th of July.

Upwards of One Hundred Bands from all parts of England are engaged to take part in this great musical contest. The contest will commence in the Grounds each day at 10 o'clock, and at 3 o'clock precisely the whole of the Bands will meet on the Great Orchestra, and perform Handel's Hallelujah Chorus, Mendelssohn's Wedding March, the Grand Coronation March, Rule Britannia, and the National Anthem; after which they will resume the contest in the Grounds till dusk.

Valuable Prizes in Money and Cups will be given by the Crystal Palace Company; and in addition, some of the principal Musical Instrument Makers of London have presented several first-class Instruments and Musical Works as Special Prizes.

Special Trains at low fares are arranged to run from all parts of England; and Trains will leave London Bridge, Victoria, and Intermediate Stations for the Palace as often as required.

Doors open at 9. Admission, 1s.; Children under 13, 6d.

CRYSTAL PALACE.—M. BLONDIN.—It is with much pleasure it is announced that arrangements have been made with M. BLONDIN to give an EXTRA SINGLE PERFORMANCE on the TIGHT ROPE (raised only a few feet from the ground) of those truly marvellous feats which he performed at the private display in the Terrace Dining-Room on Friday, June 1st, and which excited so much astonishment and elicited such extraordinary and unanimous marks of approval from the representatives of the Press and others then present. The performance will take place, on a stage erected for the purpose in the Centre Transsept, on

WEDNESDAY, JULY 24, commencing at 3 o'clock precisely, terminating before 5 o'clock. Admission by Season-Tickets, or by Day-Tickets, or on payment of Half-a-Crown each. Numbered Reserved Seats, immediately in front of the Stage, or in the Side Galleries, 5s. each. Unnumbered Reserved Seats, immediately behind the Stalls, Half-a-Crown. Tickets for admission, Stalls, and Reserved Seats on sale at the usual Agents, at the Crystal Palace, or at 2, Exeter Hall. * * * This performance WILL NOT BE REPEATED by M. Blondin. Those who desire to witness it are recommended to make early application for Tickets, particularly for Stalls, which must be LIMITED IN NUMBER.

"CROMWELL REFUSING THE CROWN OF ENGLAND," offered by the Parliament, A.D. 1657, containing upwards of Thirty Authentic Portraits, nearly life size, Painted by J. H. MAGUIRE, the property of Frank Cromley, Esq., M.P. Messrs. J. & E. H. B. beg to announce that this fine Picture is now ON VIEW at their GALLERY, 62, CROMWELL, E.C., from 10 to 5 daily.—Admission by invitation or private address card.

REQUIRED IMMEDIATELY in a School

A LADY, not under 25 years of age (Terms, 25s. to 30s. per annum), fully competent to impart a sound English Education, with French.—Address L. M., Advertiser Office, Farringdon, Berks.

THE PROPRIETOR OF A SMALL BOARDING SCHOOL FOR BOYS, in the North of England, wishes to meet with a Gentleman to succeed him at Christmas, 1861.—For particulars address A. X., care of Messrs. Williams & Norgate, 14, Henrietta-street, Covent-garden, London.

WANTED BY AN ENGLISH GENTLEMAN, Age 50, PARTIAL ENGAGEMENT as English, Italian, or French Correspondent, Confidential Secretary, Reader, Translator, Teacher or otherwise. First-rate City and West-End references offered.—Address (p.p.) Mr. C. 23, Great Portland-street, Regent-street.

EDITOR or SUB-EDITOR.—WANTED, a Gentleman competent to take charge of the Literary Department of two established Monthly Papers, and invest in a share of the same.—C. D. R., Deacon's, 150, Leadenhall-street.

TO PUBLISHERS.—A GENTLEMAN of capital is desirous of embarking in the PUBLISHING BUSINESS, either as Partner or by Purchase.—Address in the first instance, to X. Y. Z., care of Mr. Lindley, 19, Catherine-street, Strand, W.C.

LITERARY PROPERTY.—A Nobleman of high repute may hear of a chance of PURCHASING a highly-remunerative INTEREST in a Literary Property of first-class character.—Address, in strictest confidence, with real name, to ERNON, Post-office, Chancery-lane.

LITERARY.—A Graduate of an English University will be glad to UNDERTAKE FRENCH or GERMAN TRANSLATION, Medical or other, for an Author or Publisher. Satisfactory references.—Address SIGMA, Mr. Lewis's, 18, Gower-street North, W.C.

A CIVIL ENGINEER and PATENTEE is desirous of MEETING with a GENTLEMAN able to command not less than £5000, to join him in manufacturing articles in universal demand, and affording a large profit. To any one with a taste for scientific pursuits the present would afford a desirable opportunity.—Apply, with real name and Address, to ZETA, care of Messrs. W. Dawson & Sons, 74, Cannon-street, E.C.

WANTED, an ASSISTANT, in a PRINT-SELLER'S Establishment, at the West End. He must be well educated, and of gentlemanly address, and not less than 25 years of age. He will be required to attend on customers, and make himself generally useful. Only such answers will be noticed that state full particulars as to how and where previously occupied, salary expected, &c. Only those thoroughly acquainted with the business will be treated with.—Apply, by letter only, to Mr. HENING, 137, Regent-street.

SHORTHAND AMANUENSIS.—The Advertiser, having some portion of his time unoccupied, desires employment as above, or in copying, preparing MSS. for the press, &c. Has filled up appointments, and possesses superior testimonials as to ability, trustworthiness, &c.—ALPHA, Barton's Library, 7, Kennington-road, S.

MENTAL.—A Medical Man (Married), residing in a healthy locality, about two hours' run by Rail from Dublin, would TAKE CHARGE of an INVALID whose condition would render confinement in a Lunatic Asylum objectionable, but who would yet demand Medical treatment and judicious constant attention.—Address, for a Fortnight, "MEXICO," Poste-Resistante, G. P. O., Dublin.

PAINTING ON GLASS.—A. LUSSON, Painter on Glass of the Sainte Chapelle, 21, Rue de Laval, Paris.—Painted Glass, in every style, for the Decoration of Churches; Grilles, Mosaics, Great Figures, Medallions, Legendaries; Fancy Subjects, such as Mosaic; Hunting and other Subjects of the old style, or modern, for Rooms, Country Houses, &c. Sent free to all parts of England.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The objects of the Association are:—"To give a stronger impulse and more systematic direction to scientific inquiry, to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

Reception Room, The Portico, Manchester, July, 1861. The Local Committee of the British Association for the Advancement of Science announce that the MEETING for this year will be held in Manchester, and will commence on Wednesday the 4th of September next, under the Presidency of William Fairbairn, Esq., LL.D., F.R.S. &c.

On this occasion it is fully expected that there will be present many of the corresponding members of the Association, and a large number of British members, to all of whom the special inducements offered by the city of Manchester and its populous and industrious neighbourhood are well known. The time appointed for the Meeting has been arranged for the convenience of members of foreign as well as British universities, and as the facilities for arriving in Manchester are now very complete, there is every reason to anticipate a meeting of unusual extent and interest. Both the general and local officers will exert themselves to make the visit of their associates on this occasion agreeable and satisfactory.

The Local Committee are preparing, amongst other arrangements for the entertainment of the Association, besides special lectures on some interesting branches of science, open soirées to be held in the Free Trade Hall, the following special exhibitions, viz.:

An exhibition illustrative of the history, progress and achievements of photographic art in its several branches, and photographic apparatus;

And a similar exhibition of telegraphic science and apparatus;

A very extensive exhibition of modern microscopes and microscopic objects;

And exhibitions of specially interesting zoological, botanical and geological specimens, chemical products, philosophical apparatus and mechanical models;

Excursions to neighbouring localities of scientific or general interest will be provided for; and

Arrangements made for extensive access to establishments in the neighbourhood, where visitors may have the opportunity of seeing various branches of local industry and practical science in operation.

The Local Secretaries will be glad to be informed as early as may be convenient, of the intention of any visitor to be present at the Meeting, and on receiving the necessary (and timely) communication, will be happy to render such assistance as they can in arranging for visitors any lodging accommodation they may require. The scientific business of the Meeting will be allotted in the under-mentioned Sections. The following gentlemen have undertaken to act as Secretaries of Local Sectional Committees until the commencement of the Meeting, and will be glad to receive communications relating to the business of their several departments:—

SECTION A.—MATHEMATICS AND PHYSICAL SCIENCE.
Professor R. B. Clifton, B.A., Owens College, Manchester.
Thomas Heelis, Esq., Princess-street, Manchester.

SECTION B.—CHEMICAL SCIENCE.
Professor H. E. Roscoe, B.A. Ph.D., Owens College, Manchester.
Robert Rumney, Esq., Ardwick, Manchester.

SECTION C.—GEOLOGY.
John Atkinson, Esq., F.G.S., Thelwall, near Warrington.
Rev. George Perkins, M.A., Dickenson Road, Rusholme, Manchester.

SECTION D.—ZOOLOGY AND BOTANY.
Thomas Alcock, Esq., M.D., Upper Brook-street, Manchester.
George Mosley, Esq., St. Peter's-square, Manchester.

SECTION E.—PHYSIOLOGY.
William Roberts, Esq., M.D., 188, Oxford-road, Manchester.
Thomas Windsor, Esq., M.R.C.S., M'cadilly, Manchester.

SECTION F.—GEOGRAPHY AND ETNOLOGY.
Principal J. G. Greenwood, B.A., Owens College, Manchester.

SECTION G.—ECONOMIC SCIENCE AND STATISTICS.
Professor R. C. Christie, M.A., Owens College, Manchester.

SECTION H.—MECHANICAL SCIENCE.
John Robinson, Esq., The Atlas Works, Great Bridgewater-street, Manchester.

Communications intended for presentation to the Sections are expected to be forwarded in letters, addressed either to the Assistant General Secretary, at "The Portico," Manchester, or to one of the Secretaries of the Local Sectional Committees, pro tem. It is to be recommended by statement whether the author will be present, and on what day, so that the business of the Sections may be satisfactorily arranged.

As the objects of the Association are specifically scientific, papers on subjects not so characterised, as on questions of history, biography, literature or art, however interesting, are necessarily inadmissible.

Gentlemen desirous of attending the meeting may make their choice of being proposed as life members, paying 10s. as a composition, or annual subscribers, paying an admission fee of 1s. and (additional) 1s. annually, or associates for the meeting, paying 1s. Ladies may become members on the same terms as gentlemen; and ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1s.

Life members receive gratuitously the Reports of the Association which may be published after the date of payment. Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subscription, without intermission. Associates for the meeting are entitled to the Report of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that application for tickets should be made as early as possible. Forms of proposal will be supplied in the Reception Room during the meeting, or the names of candidates for admission may be transmitted to the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and arrears of former members, by the Local Treasurer.

New members will receive, as well as the volume of Transactions for this and future years gratis, as will also annual subscribers during the continuance of their subscription.

For information respecting the local arrangements, application may be made by letter addressed to any of the Local Secretaries for the meeting, at The Portico, Manchester.

R. D. DARBISHIRE, 21, Brown-street, Manchester.
ALBERT FIELD, Mayfield, Manchester.
ARTHUR HANSON, St. Peter's-square, Manchester.
H. E. ROSCOE, Owens College, Manchester.

Local Secretaries for the Meeting.

FOR SALE.—In consequence of the death of the late Mr. ANDREW DONALD, Bookseller and Bookbinder, Glasgow, his Trustees are prepared to SELL, by Private Bargain, the whole STEREOTYPE PLATES of the ILLUSTRATED FAMILY BIBLE, containing the OLD and NEW TESTAMENTS, with the Notes and References of the late Rev. John Brown, the Psalms, and Hannah's Concordance. The Plates consist of:

- 1 Set Old and New Testament, complete.
- 1 Do. do. do. nearly complete.
- 1 Set Psalms.
- 32 Pages of Illustrated Matter.
- 32 Oval Woodcuts.
- 1 Set Hannah's Concordance.

The above are in excellent condition, having undergone a thorough repair previous to the last impression. The Plates may be seen with Messrs. Blackie & Sons, Villafield, Glasgow; and copies of the Bible can be seen at Griffin, Rohn & Co., Publishers, Stationers' Hall-court, London; Mr. Robertson, Bookseller, Grafton-street, Dublin; Messrs. Cowan & Co., Publishers, Princess-street, Edinburgh; and Mr. Robert Donald, Bookbinder, 62, Argyle-street, Glasgow. Offers addressed to the said Robert Donald will be received up till 15th August, 1861.

PUBLISHING BUSINESS.—The Advertiser,

desirous of partially retiring from an established and well-known Publishing Business, having a class connexion of a particularly profitable character, wishes to MEET with a PARTNER who would take an interest and active share in the business. No special knowledge is necessary, as the Manager, who has been connected with the business for ten years in the premises, would retain his engagement.—For particulars, application may be made in the first instance by letter to A. B. C., care of Messrs. Benham & Tindell, Solicitors, 18, Essex-street, Strand, London, W.C.

 London: Simpkin, Marshall & Co. Stationers' Hall-court.

NATIONAL ILLUSTRATED LIBRARY EDITION. Crown 8vo. 3s. cloth; 3s. 6d. cloth extra, gilt edges; 7s. 6d. in morocco.

BUNYAN'S PILGRIM'S PROGRESS. New Edition, with a Memoir, by J. M. HARRIS. The *Allegory* illustrated with Original Engravings, drawn by J. R. Clayton; and the *Biographical Sketch* illustrated with Engravings of interesting Relics and Recollections of Bunyan, from Drawings by J. L. Williams.
 "This edition is one of remarkable excellence. It is handsomely got up, and very cheap. But its principal charm lies in its beautiful outline engravings, which are extremely elegant, appropriate, and classical. We strongly recommend this as the best and most useful family edition of the *Pilgrim's Progress* with which we are acquainted."—*Congregational Pulpit*.
 London: Simpkin, Marshall & Co.

SHORTHAND.—PITMAN'S PHONOGRAPHIC TEACHER: A Guide to a Practical Acquaintance with the Art of Shorthand, 6d.; by post, 7d. *The Lessons of Students are corrected gratuitously, per post, by Members of the Phonetic Society.*
 London: F. Pitman, 30, Paternoster-row, E.C.

PHONETIC READING.—First Book in Phonetic Reading, 1d.; Second Book, 2d.; Third Book, 3d. Children and Adults can acquire the art of reading common books in one-fourth of the time now spent in learning, by first going through a course of Phonetic Reading.
 London: F. Pitman, 30, Paternoster-row, E.C.

VALUABLE SCHOOL ATLASES, RECENTLY PUBLISHED BY TRÜBNER & CO.

DR. KARL VON SPRUNGER'S HISTORICO-GEOGRAPHICAL HAND-ATLAS; containing 26 coloured Maps, engraved on Copper Plates; 25 Maps devoted to the General History of Europe, and 4 Maps specially illustrative of the History of the British Isles. Cloth lettered, 15s.; or half-bound morocco, 11. 1s.

The deserved and widely-spread reputation which the Historical Atlas of Dr. Sprunger has attained in Germany has led to the publication of this English Edition, with the Author's co-operation and the authority of the German Publisher, Mr. Justus Neumann. Inasmuch as an inferior, unauthorized, and carelessly-prepared Atlas has recently appeared, in which Dr. Sprunger's Maps have been reproduced without reference to the copyright of the Author, or to the demand which the Public make for accuracy and fitness, it is necessary to be particular in specifying the Author's Edition.

A detailed Prospectus, with a specimen Map, will be forwarded on application, on receipt of one postage-stamp.

Dr. T. MENKE.—ORBIS ANTIQUI DES-SCRIPTIO for the Use of Schools; containing 16 Maps, engraved on Steel and coloured, with descriptive Letter-press. Half-bound morocco, price 5s.
 London: Trübner & Co. 30, Paternoster-row.

HAVET'S GRAMMAR OF FRENCH GRAMMARS. New Edition, 450 8vo. pages, 7s.

THE COMPLETE FRENCH CLASS-BOOK: I. a Theoretical and Practical French Manual, prepared expressly for the Use of English Learners, and based upon the Works of the French Academy and the Standard Grammars of the present day.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.

"No other book is so well calculated to make a complete French scholar as M. Havet's admirable and comprehensive work."—*Journal of Education*.

"Havet's popular 'French Class-Book' is by far the most solid and practical production of its kind. It contains the rudiments, the usual practice, and the niceties of the language, all in one volume, lucidly arranged, and set forth with an intimate knowledge of what is easy and what is difficult to English students of French."—*Continental Review*.

London: W. Allan, 9, Stationers' Hall-court.

SOLOMON'S PRECEPT; or, the POWER of the ROD: a Tale of the Flogging-system.
 Price 2s. cloth.

"The administration of corporal punishment for anything not absolutely criminal, is intolerable. No one can be indifferent to the abuses that occur, and ever will occur, under a system of corporal punishment. It is a business, it is often regarded as wickedness, and most cruelly punished accordingly."—*Extracts out of a Letter to the Author, from the Earl of Shaftesbury*.
 Published by Simpkin, Marshall & Co. Paternoster-row.

WATSON'S PUPIL-TEACHER'S HANDBOOK, 1s.

The Publisher respectfully calls the attention of the Educational Public to his Series of **READING BOOKS**, as supplying a generally acknowledged want. The first two are training in the art of Reading forms the habit or manner of Reading for the future. It is in learning to read that the style of reading is acquired. Great pains have therefore been bestowed in the construction of the Lessons in these Books. The principle is simple, progressive, and adapted to the gradual development of the reading voice.

In the Elementary Books purity and propriety of vowel sound, distinctness of articulation, firmness of utterance, and natural inflection, are continually kept in view. To the Reading Lessons of each day Lists of Words are prefixed, carefully accented and divided, so as to add the quickness and accuracy of the child both in Pronunciation and Spelling.

In the advanced Books, unlike nearly all those at present in use, the selections have been made not on account of the literary reputations of the authors of the pieces selected, but under the guidance of the necessary text that they possess the capability of being well voiced, and thereby developing the powers of the voice, subjects beyond the comprehension, or likely to strain the voice beyond the natural pitch or force, being carefully avoided. The Syllabicated Words furnish Lessons in Spelling and Syllabication, oral or written; derivation and definition; articulation and pronunciation. The matter of all the Lessons has been selected so as to foster the powers of thought and the moral and religious sense.
 George Watson, Glasgow; W. Kent & Co. London.

EQUATORIAL AFRICA and ITS INHABITANTS.—See the WESTMINSTER REVIEW for JULY.

"The question of the origin of man and his alleged relation to the apes is exhaustively treated in the current number of the Westminster Review, where our readers will find a full account of the controversies between Profs. Owen, Huxley, and others on the relative development of the posterior cerebral lobes and lesser hippocampi, and of the discoveries of skulls of a low type which approximate more nearly to the ape than do even those of the African or Polynesian savage."

ENGINEERING SCHOOL CLASS-BOOKS.

In 8vo. 4s. 6d. bd. with 220 Diagrams engraved for the Work.

I.**EUCLID'S ELEMENTS of PLANE GEOMETRY, with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise.** Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.B.

Author of the 'History of Maritime and Inland Discovery,' 'The Negroland of the Arabs,' &c.

"Mr. Cooley has produced an edition of Euclid's Elements, which for brevity, clearness, and discerning attention to the wants of learners, cannot be easily surpassed. When we add, that it is remarkable for its typographical neatness, that its form is convenient and price moderate, we feel justified in predicting for it an extensive circulation."—*Dublin University Magazine*.

"Mr. Cooley seems almost to wish to contradict his own motto—that 'there is no royal road to Geometry,' for following in the steps of Playfair, he has considerably diminished both the volume of the work, as well as the labour of the student. Puffed to the Elements are some remarks on the study of mathematics, as valuable for the elegance of their style as for the correctness of their reasoning."—*Civil Engineer and Architect's Journal*.

II.

Uniform with the Elements, price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or, a Supplement to Euclid, being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 150 Propositions, deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

III.

In fcap. 8vo. price 1s. 6d.

COOLEY'S FIGURES of EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations printed separately for Use in the Classroom.

London: WILLIAM TREG, Pancras-lane, Cheapside.

NEW AND GREATLY IMPROVED EDITIONS OF DR. M'CULLOCH'S READING-BOOKS FOR SCHOOLS.

- FIRST READING-BOOK** 1½d.
SECOND READING-BOOK 3d.
THIRD READING-BOOK 10d.
FOURTH READING-BOOK and SYNOPSIS of SPELLING 1s. 6d.
SERIES of LESSONS in PROSE and VERSE 2s. 0d.
COURSE of ELEMENTARY READING in SCIENCE & LITERATURE 3s. 0d.

These Books are intended for the use of Schools where the general mental culture of the pupil, as well as his proficiency in the art of reading, is studiously and systematically aimed at.

They form, collectively, a progressional Series, so constructed and graduated as to conduct the pupil, by regular stages, from the elementary sounds of the language to its highest and most complex forms of speech; and each separate Book is also progressively arranged,—the lessons which are more easily read and understood always taking the lead, and preparing the way for those of greater difficulty.

The subject-matter of the Books is purposely miscellaneous; yet it is always of a character to excite the interest and enlarge the knowledge of the reader. And with the design of more effectually promoting his mental growth and nurture, the various topics are introduced in an order conformable to that in which the chief faculties of the juvenile mind are usually developed.

That the moral feelings of the pupil may not be without their proper stimulus and nutriment, the lessons are pervaded throughout by the religious and Christian element.

The Publishers confidently invite the attention of Teachers to the New Editions of these Works, in the belief that, after the thorough revision to which they have just been subjected by the Author, they will be found to be in all respects adapted to the present advanced state of Education.

The **FIRST** and **SECOND** READING-BOOKS consist, as before, of Lessons on the Elementary Sounds of the Language; but they have been enlarged for the purpose of introducing additional exercises, and thereby facilitating the acquirement of the first elements of reading.

The **THIRD** READING-BOOK has undergone some changes both in its contents and in their arrangement, in order to render the lessons at once more interesting in themselves and more gradual in their sequence.

The **FOURTH** READING-BOOK supplies a gap, previously existing, between the **THIRD** BOOK and the **SERIES of LESSONS**. Being intended for the use of the pupil at a stage of his progress when he needs to be exercised chiefly in reading, without having his attention constantly distracted by questions on the import of what he reads, it contains only such lessons as are level to his unaided understanding,—Fables, Tales, Allegories, and other compositions of a character at once interesting and self-interpreting. A Synopsis of Spelling is appended.

The **SERIES of LESSONS** comes next in order; and in the New Edition it has been not only revised and corrected, but to a considerable extent recast. Obsolete lessons have been cancelled; those which are retained have been amended; and new ones have been introduced of a nature and style adapted to the educational requirements of the day. The whole contents moreover are so graduated, in respect both of expression and of thought, as to form an

appropriate sequel to the **FOURTH** BOOK, and a suitable introduction to the **COURSE of ELEMENTARY READING in SCIENCE and LITERATURE**.

In the New Edition of this last-named work—the **COURSE**—the changes introduced for the purpose of bringing it into harmony with the progress of knowledge and the altered conditions of education are on so extensive a scale, that they amount to little short of an entire reconstruction of the work. As before, however, the greater part of the book consists of lessons on Natural History, the Physical Sciences, Geography and Astronomy, and the Christian Religion; though on most, if not all, of these lessons material changes have been made, in order to render them at once more consecutive and more comprehensive. Among the subjects introduced for the first time are a series of lessons on Electricity and the Electric Telegraph, on Language and Literature, and on the Phenomena of Industrial Life (such as Prices, Wages, Strikes, &c.). The Miscellaneous lessons have been remodelled so as to supply a greater amount and variety of interesting and agreeable reading. And in the Poetical department, specimens are given, in chronological order, of all our great poets from Spenser to Tennyson, along with examples of the manner in which the same subject is handled by different poets. A Vocabulary of Scientific Terms has been added for the use both of Teachers and of Pupils.

*. The New Editions may now be had from any Bookseller, except of the "First" and "Second" Books, which will be issued shortly. All the *Old Editions* will, for the convenience of Schools, be kept on sale for a limited time.

MR. HARRISON AINSWORTH'S NEW WORK.
In 3 vols. post 8vo.

THE CONSTABLE OF THE TOWER: an Historical Romance. BY WILLIAM HARRISON AINSWORTH. With Illustrations by Gilbert.
"The Constable of the Tower" is one of the best of our English historical romances.—*London Review*.

Fcap. 8vo. 3s. 6d.

TANNHÄUSER; or, the Battle of the Bards: a Poem. By NEVILLE TEMPLE and EDWARD TREVOR.

"Tannhäuser" is a remarkable, and even, in its way, an original, production.—*Saturday Review*.
"Without dwelling on the praise due to a well-conceived and interesting romance, with a fit and happy solution in the unexpected miracle with which it ends, we turn to the wealth of poetical imagery, and to the delicacy of poetical feeling with which it has been set to music in this little story-book of verse.... We have not for a long time read anything in poetry that has given us more genuine pleasure."—*Examiner*.

Post 8vo. price 10s. 6d. with Illustrations,

A CRUISE in the CLAYMORE on the COAST of SYRIA during the Present Troubles. By Mrs. HARVEY, of ICEWELL-BURY.

"Mrs. Harvey's narrative of these events, as well as her account of the numerous places of note which she visited, is straightforward, unaffected, and remarkably free from feminine exaggeration; and we have great pleasure in heartily recommending her book to all who take an interest in the scenes which it describes."—*Spectator*.

In post 8vo. price 6s.

FORAYS among SALMON and DEER. By J. CONWAY.

"He tells his story in a very pleasant and amusing manner; and his book cannot fail to be welcome to all true lovers of the sports which he describes."—*Spectator*.

NEW SPORTING NOVEL.

Third Edition, post 8vo. 2s.

MARKET HARBOUROUGH; or, How Mr. Sawyer went to the Shires.

"From the very beginning of the hero's adventures a certain interest is experienced which never falls off, and the only annoyance felt is that the visit of Mr. Sawyer to the Shires terminates so soon. Indeed, the fault here perceptible may with equal truth be urged against Major White Melville in some of his previous writings, his finishing being too abrupt."—*Press*.

Second Edition, 3 vols. post 8vo. 16s.

LA BEATA: a Novel. By Thomas ADOLPHUS TROLLOPE.

"La Beata" is a novel of which there is nothing to say but what is good. It is a charming story, and, though the theme is as old as the world, it has the eternal and ever-renewed freshness of life itself.—*Athenæum*.

3 vols. post 8vo. 18s.

THE ENGLISH at HOME. Essays from the *Revue des Deux Mondes*. By ALPHONSE ESQUIROS. Translated and Edited by LARCELLES WRAXALL.

"M. Esquiros himself is a sort of French Washington Irving, in his zealous pursuit and his cordial appreciation of the latent characteristics of English life; though at the same time that he views English manners and institutions sympathetically, even those that dissent from him must allow that he judges them with a frank independence.... We can go further with M. Esquiros in desiring that a better agreement on the spirit of the institutions which rule civil life will tend to approximate the character and genius of the two peoples still nearer; and, as his own book is unquestionably an effort in this direction, it has our warmest sympathy and our cordial approbation."—*Times*, May 25, 1861.

Price 7s. 6d.

MARTIN CHUZZLEWIT. Vol. II. With the Original Illustrations forming the New Volume of the "Illustrated Library Edition of Mr. Charles Dickens's Works."

CHAPMAN & HALL, 193, Piccadilly.

HURST & BLACKETT'S NEW PUBLICATIONS.

13, Great Marlborough-street.

THE OKAVANGO RIVER. A Nar-

rative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' Sixty Portrait of the Author, and numerous Illustrations. 21s. bound. (Next week.)

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 2 vols. with Portraits, 21s.

"Miss Freer's ability and research have raised her to a conspicuous position among our historical writers. Among the most prominent of her qualities is a rare spirit of moderation and impartiality, an important and essential quality in the reign of Henry IV. was, its details are little known by general readers among us, and therefore, in presenting so complete and interesting a narrative, Miss Freer has done good service to the public, besides enhancing her own well-earned reputation."—*Sun*.
"This is the greatest work to which Miss Freer has dedicated her powers. She draws her materials from sources mostly original, and she has selected for illustration a period the interest of which can scarcely be said to be second to any in modern times. There was romance in Henry the Fourth's character, and in his career, and events of importance were grouped around his life. Miss Freer writes only after the most conscientious research, and with a mastery of the subject which will go far towards explaining the vitality and animation which so distinguish her productions. Where a style of such supreme attractiveness is combined with such accuracy in detail, it is impossible not to give the work a high place in the literature of the day."—*Sunday Times*.

A SAUNTER THROUGH THE WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"The title of this work is unexceptionable: it is happily and appropriately chosen to denote the gossiping contents of the book—light, cheery, and amusing. The author quietly puts his arm in that of his reader, and, as he passes on from Hyde-park Corner down Piccadilly or Pall Mall to the Haymarket and Soho, points out the anecdotes connected with each locality. Touches of quiet, genial humour, playful interruptions and amusing stories told in a quaint, unaffected style contribute to the attractive conversational tone adopted, as he saunters along with his friend of the hour. The reader will find himself agreeably carried on from the first to the last page of the 'Saunter' by its cheerful tone and entertaining gossip."—*Literary Gazette*.

JAVA; or, How to Manage a Colony:

Showing a Practical Solution of the Questions now affecting British India. By J. W. B. MONEY, Esq. 2 vols. 21s.

"A remarkable book. It will naturally excite the attention of every educated Englishman."—*Times*.

NOTHING NEW. By the Author of

'JOHN HALIFAX, GENTLEMAN.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of HURST & BLACKETT'S STANDARD LIBRARY OF CHEAP EDITIONS OF POPULAR MODERN WORKS. 5s. bound.

"Nothing New" displays all those superior merits which have made 'John Halifax' one of the most popular works of the day."—*Post*.

RECOLLECTIONS of a FOX-

HUNTER. By 'SCRUTATOR.' 1 vol. with Illustrations.

"This is Scrutator's best work. It is a sort of memoir of the hearty and accomplished writer, including pleasant notices of sporting celebrities, such as Asheton Smith, &c.; but the real truth of the volume consists of experiences in the hunting field—real truths conveying excellent lessons as to horse and hound, and insuring for the volume an honoured place in every sportsman's library."—*Era*.

A BOOK ABOUT DOCTORS. By

J. C. JEAFFERSON, Esq. New, Revised, and Cheaper Edition, in 1 vol. 10s. 6d. bound.

"This is a rare book; a compliment to the medical profession, and an acquisition to its members: a book to be read and re-read: fit for the study and the consulting-room, as well as the drawing-room table and the circulating library."—*Lancet*.

THE NEW NOVELS.

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONEY,' 'WILDFLOWER,' &c. 3 vols.

"This is the best story hitherto written by a very pleasant novelist. It is essentially, and throughout, a good story—rapid and rich in incident—that nobody will leave unfinished. The book asserts a high standard of right, but it nowhere preaches, and is full of the cheerfulness and tolerance of Christianity. It is one of the pleasantest and wholesomest of the novels of the season."—*Examiner*.

"The author of 'Under the Spell' writes well. His plot is excellent, and so worked out that the reader feels to the end interested in the characters brought before him."—*Spectator*.

"A brilliant and excellent novel."—*Sun*.

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

"Paul Foster's Daughter" is a tale redolent of life and humanity. The interest never flags."—*John Bull*.

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON.' 3 vols.

HOMELESS; or, a Poet's Inner Life.

By M. GOLDSCHMIDT, Author of 'JACOB BENDEXER.' 3 v.

"There is much that is eloquent and beautiful in this book. The whole aim of the work is elevated and noble."—*Athenæum*.

THINKING and ACTING. By a

CLERGYMAN'S DAUGHTER, Author of 'HELEN LINDSAY,' 'OUR HOMELESS POOR,' &c. 3 vols.

"There is a charm about this tale which immediately captivates the reader."—*Messenger*.

LITERATURE

Summary of the Acts of Don Fernando Cortes—[Archivo Mexicano: Documentos para la Historia de Mexico. Sumario de la Residencia tomada a D. Fernando Cortes, Gobernador y Capitan General de la N. E. y a otros Gobernadores y Oficiales de la Misma. Palaeografiado del original por el Lic. Ignacio Lopez Rayon]. (Mexico, Tipographia de Vicente Garcia Torres.)

FASCINATED ourselves by the brilliant career and attractive qualities of Cortes, we should have expected that the modern Mexicans—the descendants of his ancient comrades and compatriots—would have cherished his memory and been proud of his fame as their national hero. Strange to say, this is not the case. In 1823 the mob would have broken open his tomb, in order to scatter his ashes to the winds, had they not been anticipated by some friends who secretly removed the relics. In the present day, we cannot travel in Mexico without finding that the feeling towards Cortes is very different from that which is entertained by those who have formed their judgment of him solely from a perusal of Prescott's pages. The Mexican's admiration of his showy qualities is seasoned by a liberal admixture of depreciation; and dark stories of guilt and cruelty, handed down by tradition, are readily produced in support of their opinion.

How comes such a feeling to prevail? Where there is smoke there must be some fire; and it may either be that this is the smoke issuing from the accusations made against Cortes in his lifetime, and dismissed by Prescott as unworthy of credit; or that Prescott has erred in so treating them, and that the opinion entertained by the Mexicans is the true one—that many of these accusations were true, and that history must accept them as flaws on the character of this great man. The author, or rather compiler, of the work which we have noted at the head of this article takes the latter view; and in his published extracts from the Mexican archives we have, doubtless, the long-forgotten source whence many of these stories and much of this feeling have arisen.

The documents here published exist in the archives of the city of Mexico, and were deciphered and copied by Rayon, a lawyer there. They consist of the instructions from the King to Luys Ponce de Leon—his secret instructions—the examination of the witnesses, &c., and a criminal process brought, at the instance of his wife's mother and brother, against Cortes for the murder of his wife.

The charges involved in these documents were all known to Prescott, and summarily and *ex cathedra* disposed of in a couple of pages, as follows:—

"A remarkable document still exists, called the *Pesquisa Secreta*, or Secret Inquiry, which contains a record of the proceedings against Cortes. It was prepared by the Secretary of the Audience, and signed by the several members. The document is very long, embracing nearly a hundred folio pages. The name and testimony of every witness are given, and the whole forms a mass of loathsome details, such as might better suit a prosecution in a petty municipal court than that of a great officer of the Crown. The charges are eight in number, involving, among other crimes, that of a deliberate design to cast off his allegiance to the crown; that of the murder of two of the commissioners who had been sent out to supersede him; of the murder of his own wife, Catalina Xuarez; of extortion and of licentious practices; of offences, in short, which, from their

private nature, would seem to have little to do with his conduct as a public man. The testimony is vague, and often contradictory; the witnesses, for the most part, obscure individuals; and the few persons of consideration among them appear to have been taken from the ranks of his decided enemies. When it is considered that the inquiry was conducted in the absence of Cortes, before a Court the members of which were personally unfriendly to him, and that he was furnished with no specification of the charges, and had no opportunity, consequently, of disproving them, it is impossible at this distance of time to attach any importance to this paper as a legal document. When it is added that no action was taken on it by the government to whom it was sent, we may be disposed to regard it simply as a monument of the malice of his enemies. It has been drawn by the curious antiquary from the obscurity to which it had been so long consigned in the Indian archives at Seville; but it can be of no further use to the historian than to show that a great name in the sixteenth century exposed its possessor to calumnies as malignant as it has at any time since."

Now, we hold that no historian has a right to form a verdict for the reader in this way without producing the evidence upon which he has arrived at it. It is no matter that the author has formed a right verdict. Let him give his opinion, plead in support of it, and sum up as he pleases, but, at least, let him, also, tell the reader what is the evidence which he has rejected, and why. If he does not do so, his verdict will not, and should not, pass unchallenged. It is so here. Had Mr. Prescott presented to the reader even a summary of the evidence for the charges which he repudiates, and discussed the evidence for or against them with greater deliberation, the work which we are now noticing would probably never have seen the light. It is, we think, if taken without explanation or examination, calculated to damage the character of Cortes most materially; for there is an amount of *vraisemblance* and consistency in the evidence given which leaves an impression of its truthfulness; and yet, admitting its perfect truthfulness and *bona fides*, it seems to us to contain intrinsic evidence of Cortes' innocence.

It will answer the reader's purpose if we take the most flagrant, and apparently the best supported, case,—viz., that of the murder of his wife,—and give a summary of the evidence brought forward in support of it.

For the better understanding of some of the allusions, we may shortly recall to the recollection of the reader the chief circumstances connected with Cortes's marriage with Doña Catalina. Prescott tells us that—

"among the families who had taken up their residence in Cuba was one of the name of Xuarez, from Granada, in old Spain. It consisted of a brother and four sisters remarkable for their beauty. With one of them, named Catalina, the susceptible heart of the young soldier became enamoured. How far the intimacy was carried on is not quite certain; but it appears he gave his promise to marry her, a promise which when the time came, and reason, it may be, had got the better of passion, he showed no alacrity in keeping. He resisted, indeed, all remonstrances to this effect from the lady's family, backed by the governor, and somewhat sharpened, no doubt, in the latter by the particular interest he took in one of the fair sisters, who is said not to have repaid it with ingratitude."

This must have been about the year 1511. By-and-by, however, "for some reason not explained, perhaps from policy, he now relinquished his objections to the marriage with Catalina Xuarez. He thus secured the good offices of her family." There is some inconsistency here, for it seems difficult to understand what value could be attached to these

good offices, when we are told by Prescott, in the next page, that "his days glided smoothly away in the society of his beautiful wife, who, however ineligible as a connexion from the inferiority of her condition, appears to have fulfilled all the relations of a faithful and affectionate partner. Indeed, he was often heard to say, at this time, 'that he lived as happily with her as if she had been the daughter of a duchess.' Fortune," says Prescott, "gave him the means in after-life of verifying the truth of his assertion." He should have said making comparison between her and the daughter of a duchess; for whether he verified the assertion (not *verified the truth* of the assertion) or not there is no sufficient evidence to show. A testamentary expression of confidence and love in his second wife can hardly be regarded as such; and the issue is now raised further, whether it *was* fortune that gave him the means of doing so, or a more direct interference of his own.

After living with her for some time in pastoral retirement, in Cuba, he sailed on the course of adventures which terminated in the conquest of Mexico; and it was not until he was firmly seated there as conqueror and governor that Catalina joined him. The remainder of the story is thus told by Prescott:—

"His own wife, Doña Catalina Xuarez, was among those who came over from the Islands to New Spain. According to Bernal Diaz, her coming gave him no particular satisfaction. It is possible, since his marriage with her seems to have been entered into with reluctance, and her lowly condition and connexions stood somewhat in the way of his future advancement. Yet they lived happily together for several years, according to the testimony of Las Casas, and whatever he may have felt, he had the generosity or the prudence not to betray his feelings to the world. On landing, Doña Catalina was escorted by Sandoval to the capital, where she was kindly received by her husband, and all the respect paid to her to which she was entitled by her elevated rank. But the climate of the tableland was not suited to her constitution, and she died three months after her arrival,—of asthma, according to Bernal Diaz, but her death seems to have been too sudden to be attributed to that disease. Her death happened so opportunely for his rising fortunes, that a charge of murder by her husband has found more credit with the vulgar than the other accusations brought against him. Cortes, from whatever reason, perhaps from the conviction that the charge was too monstrous to obtain credit, never condescended to vindicate his innocence. But, in addition to the arguments mentioned in the text for discrediting the accusation generally, we should consider that this particular charge attracted so little attention in Castile, where he had abundance of enemies, that he found no difficulty, on his return there, seven years afterwards, in forming an alliance with one of the noblest houses in the kingdom; that no writer of that day except Bernal Diaz (who treats it as a base calumny), not even Las Casas, the stern accuser of the conquerors, intimates a suspicion of his guilt; and that, lastly, no allusion whatever is made to it in the suit instituted some years after her death, by the relatives of Doña Catalina, for the recovery of property from Cortes, pretended to have been derived through her marriage with him; a suit conducted with acrimony, and protracted for several years. I have not seen the documents connected with this suit, which are still preserved in the archives of the house of Cortes, but the fact has been communicated to me by a distinguished Mexican who has carefully examined them, and I cannot but regard it as of itself conclusive, that the family, at least, of Doña Catalina did not attach credit to the accusation."

But there is a very good reason why no notice of the charge of murdering his wife is taken by her relatives, in the process here referred to. It is simply this, that at the time it was going on she was still alive; and, were it not so, the

existence of a process actually brought by them against him for this very charge would sufficiently prove that no inference favourable to his innocence could be drawn from their silence. The fact, however, appears beyond doubt, from the criminal process (in which on its side sufficient allusion is made to the lawsuit), that the law process had been going on for years during the life of Doña Catalina.

The criminal process takes the form of a complaint by the mother and brother of Doña Catalina; an answer by Cortes; interrogatories proposed by the complainers; and the evidence adduced by them. There it stops. The evidence for the defence (if there ever was any) is wanting.

Independently of their interest from the historic personages concerned in them, the documents are in themselves curious from the glimpses which they give us of the familiar, every-day life of the times to which they relate. The close similarity of the law proceedings to those of the present day is not very flattering to the progress made in their actual style of procedure by jurists, however much the principles of jurisprudence may have advanced. The verbiage and repetitions of the writer, paid by the page, are shown to have been handed down to us uncorrected for at least 300 years. We find here examination of witnesses upon interrogatories,—the whole procedure being as nearly as can be that of a modern proof of the same kind. The witnesses are duly sworn to tell the truth. Their depositions conclude almost in the words of a deposition of the present day. For instance, the closing words of a modern English deposition would be, "All which he deposes to be truth, as he shall answer to God; and in respect that he cannot write, makes his mark." Here is the Spanish of 1529:—"Swears to the truth of the preceding deposition; and not being able to write, makes a mark" (*una rubrica*),—and the mark, or *rubrica*, is not, as is supposed by some, a symbol or device specialized by its user, but the same villanous attempt at a cross, which our own uneducated classes still make.

The process thus proceeds:—

"Criminal Process.—Maria de Marceyda against D. Hernando Cortes.—In the great city of Temistitan, Mexico, of this New Spain, on the 4th of February, 1529, before the illustrious and magnificent Señor Nuño de Guzman and the licentiate Juan Ortiz de Matienso and Diego Delgadello, President and Judges of the Royal Audience and Chancery, residing, by order of His Majesty, in this New Spain, and in presence of me, Geronimo de Medina, Secretary of the said Audience, appeared Maria de Marceyda and Juan Suarez, her son, in her name, and presented a complaint and accusation in writing against D. Hernando Cortes, the tenor of which is as follows:—Most Potent Signors,—We, Maria de Marceyda and Juan Suarez, her son, appear before your Majesty, and complain of Don Hernando Cortes, Governor and Captain-General that was of this New Spain; and relating the cause of our complaint, we say, that, on a certain day and month in the year 1522, the said Hernando Cortes, being legally married according to the requirements of Holy Mother Church to my sister, Doña Catalina Suarez, in his house in Coyoacan; the said Doña Catalina being in good health, and without having said or done anything for which she should receive hurt or damage, and being with her said husband, whose duty it was to see after and take care of her, not only because he was her husband, but still more as the administrator of justice,—the said Don Hernando Cortes, the criminal by our denouncement and complaint, with little fear of God and of his King and Lord, under whose protection we all live, with malice prepense, in their sleeping apartment, did hand-bind the said Doña Catalina when it was out of

her power to call for aid except of God Our Lord and Holy Mary his Mother, Our Lady, and tie certain cords round her throat, and tightened them until she was strangled and naturally died; and after dead, he put her down, and called his servants, and ordered one Villanueva, his valet, to tell me, Juan Suarez, to remain quiet in my room. That Villanueva, knowing or suspecting what had happened, sent a neighbour, Esidro Moreno, to deliver the message, which he did, accompanied by many threats, in case I should venture where my sister was. That the said Don Hernando Cortes then covered her face and neck, and with indecent haste caused her to be nailed up in a coffin, so that no one should see her or know the cause of her death. That it was immediately rumoured abroad in Coyoacan that D. Hernando Cortes had killed her, because, on the evening previous, she had been very merry and in high spirits, not only with her husband, but with the gentlemen and ladies who had been at the house. That, in consequence of this rumour, a friar of the order of San Francisco said to him, 'Señor, for the sake of your own honour, I tell you that they say publicly in the city that you have killed your wife.' To which he haughtily replied, 'Who are the traitor knaves who say so?' That the friar answered: 'I only mention it to recommend that the coffin be opened, and the people allowed to see the body and satisfy themselves that your worship had no hand in her death.' That the first Alcalde, Diego de Ocampo, then stepped forward, and said, 'Go to, father! Let them be for fools. No one can suppose such a thing of D. Hernando Cortes, the Captain-General,'—and that he ordered the funeral to proceed, which it did, accompanied by a large concourse of people. Therefore, we pray your Majesty to receive the evidence required in such cases, and, when received, to order the apprehension of the said D. Hernando Cortes, &c. And we swear by God and this cross † that this complaint is not made maliciously, but purely for the ends of justice."

The reply of Cortes' attorney is very short, and amounts simply to this, that it is a most atrocious lie (*la mayor faldedad y maldad que ay en el mundo*)—the greatest falsehood and wickedness in the whole world, got up out of spite, because there is a lawsuit between the parties about some two hundred and odd thousand dollars; and that it is only one of the many malicious devices resorted to for the purpose of obscuring the merit of his signal services. The judges then allow a proof, and a List of Interrogatories are given in, which Juan Xuarez demands shall be asked of his witnesses. The first witness is Ana Rodriguez, Doña Catalina's lady's-maid and the wife of Juan Rodriguez, mason.

To the first three questions, which were whether the witness knew the parties and believed them to be married, &c., she replied in the affirmative. The style of the Interrogatories is the following. For instance, take the next, the 4th:—

"If she knew, believed, had seen, or heard tell whether, on a certain occasion, in 1522, when Cortez and his wife gave a feast, at which many people of both sexes were present, and stayed to supper, and when they had a very pleasant party and a good time generally, the said Doña Catalina Suarez was in good health, strength and spirits, without any symptom of illness. Let the witness say and declare what she knows."

To this and other questions, propounded in the same leading fashion, she replied:—

"That on the night of the death of Doña Catalina Suarez, the date of which she does not remember, she saw that Don Fernando gave a feast in the city of Coyoacan, at which Doña Catalina was very happy and in high spirits (*alegre y regocijada*), and to all appearance in perfect health, and at night, when about to retire to bed, she went to pray in a chapel (*oratorio*), which she had in the house, and when she came out this witness saw her, with her colour changed, and asked her what was the

matter; to which she replied, that she wished God would take her from this world; also that she heard her pray to God in the chapel to take her away. On being asked if she knew why Doña Catalina made this prayer, and what was the reason of her unhappiness, since she had so recently joined her husband after such a lengthened absence, in the island of Cuba, where she had received ill treatment at the hands of the Courts, and now she was with her husband and in prosperity, the witness replied, that she believed she was jealous, and was unhappy because Don Fernando feasted other ladies and women in the neighbourhood. That on the same night she saw Don Fernando and Doña Catalina, in very good humour, retire to their chamber, and this witness being the lady's-maid of Doña Catalina, undressed her and saw her to bed, apparently in good health; then went to her own room to sleep, as usual, leaving the two in bed as she was wont. That a short time after this, on the same night, this witness being already asleep, an Indian woman came to call her and told her that Don Fernando wanted her; that she got up and dressed and went to his room, when he told her to fetch a light, for it was dark; that she did so, and on entering the room he said to her 'I think my wife is dead,' and this witness and the wife of Soria went to the bed and found her resting on the arm of Don Fernando, dead, and him calling on her thinking she had swooned (for she was subject to fainting fits). There were also present Alonzo de Villanueva, his valet, and Violante Rodriguez, who came along with this witness when she brought the candle. That Don Fernando's body-guard used to be in the ante-chamber, but she does not remember whether the guard was set that night or not. She knows, however, that he did not call any others but this witness and his servants, who came into this room before Doña Catalina was laid out. That owing to her perturbation on entering the room she did not take notice of the beads,* but, in the morning an Indian woman gave her some gold beads, which Doña Catalina had been in the habit of wearing round her neck, saying that she had found them in the room, and further that she saw some black marks on her throat; and suspecting that Don Fernando had strangled his wife, she asked what marks those were, and he replied, that he had taken hold of her there in trying to rouse her when she fainted; but this witness and the other servants present suspected him of having strangled her, and murmured among themselves to that effect. That she and Maria de Vera and others present covered the body with a shawl, not by order of Don Fernando, but of their own free will. That, after being laid out, Doña Catalina was put on a bier, until morning; and at dawn they put her in a coffin and carried her off to be buried."

Then follow two fine specimens of leading questions, viz. 10th.—

"If she knows that after the coffin was closed two San Franciscan friars went early in the morning to see Don Fernando Cortes, and said to him, 'Señor, all the city says that you have killed your wife; for the love of God see and have that coffin opened, so that the people may see that there is no truth in the report, and that your own honour may be vindicated, otherwise everybody will believe it.'"

And 11th:—

"Item if she knows that Don Fernando Cortes answered and said, 'Whoever says so, let him go to the devil; I am not obliged to render an account to any one.' And that the first Alcalde, Diego Ocampo, being present, said, 'Such a thing is not to be presumed of your worship, and let those who say it be considered evil speakers.'"

To this curious style of hearsay interrogatory Ana Rodriguez consistently replies:—

"That she heard the matter in this question publicly mentioned at the time, and that in reply to the remark, 'Have a care, Señor, for they say that you killed your wife,' he replied, 'She went

* This is in answer to a leading question (the 7th), whether on entering the room they found Doña C. Suarez dead, and the beads of her necklace strewn over the bed, some of them broken, the bed wet, and the body showing marks of violence on the throat.

to bed in good health, and in the morning she was dead."

The next interrogatory is,—

"If she knows, believes, has seen, or heard tell, that immediately after her death, on the same night, about twelve o'clock, Cortes sent Alonzo de Villanueva, his valet, to tell Juan Suarez, her brother, not to leave his room on pain of death, which message the said Alonzo de Villanueva did not like to deliver, but sent instead one Isidro Moreno to do so."

To this she replies:—

"That she heard that Don Fernando, after her death, but before her burial, sent word to Juan Suarez, her brother, that he had been the cause of her death, on account of some misunderstanding he had had with him."

Elvira Hernandez answers most of the leading questions simply in the affirmative. The only additional circumstances mentioned by her are:—

"That on the day when Doña Catalina died she saw her in church at a funeral service in perfect health, and that from the church she invited a number of ladies to her house; that this witness had heard it said that on that evening she had been very merry and in great spirits, and had gone very late to bed; and that one Bartolome, a friar of the order of Our Lady of Mercies, told this witness that before going to bed Doña Catalina had gone into the chapel, and had cried and sobbed much, and that Don Fernando had asked her why she cried, and that she had replied, to let her alone, that she wished to die, and that in the morning she was dead. That she remembers hearing Maria de Vera [another witness] say, that when she went into the room and found the deceased covered with a shawl, she was about to remove it, when Don Fernando told her to let it alone, that it was well enough, and that she had seen marks of violence on her throat, and a stain of blood on her forehead, and some beads of her necklace broken. Asked if she knows or believes that Don Fernando killed his wife. Replies that the whole town said so publicly at the time, and that she suspected it, because she had gone to bed well and was dead in the morning, and also because at that time there arrived one Juan Bono with proposals of marriage with a lady in Castile, and that the day previous he had been shut up with this Juan Bono in a private interview the whole day, and they say that this marriage was the subject of discussion."

Anton Hernandez, wife of Balthazar Rodriguez, and Violante Rodriguez, wife of Diego de Soria, do little more than answer the leading questions in the affirmative. Isidro Moreno knows of the party at Don Fernando's house, "because he was a servant in the house, and had accounts with the mayor-domo relative to house expenses, and saw Doña Catalina well and merry in the feast given that day. That after the entertainment, and at the supper-table, the cloth being already removed, in consequence of some remark made by Don Fernando, Doña Catalina rose from the table, and, having made her obeisance (*acatamiento*), left the room in a pet, while Don Fernando remained with the visitors. After awhile, the company broke up, and he went into another room to undress, as was his custom. He remained for an hour or two talking with some of the people of the house, and then with his page retired to go to bed, and this witness and the other servants of the house went to sleep. In two or three hours afterwards, as near as this witness can judge, they came to call the mayor-domo himself and the other servants, saying that Doña Catalina was dead; and that this witness and Diego de Soto, the mayor-domo, went to Don Fernando's room, and found him with two pages, one called Salazar, and the other Villareal, cousin of Antonio de Villareal, now Mayor of this city. That when they came

into the room, where A. de Villanueva had arrived a minute before them, they found Don Fernando shouting and beating himself against the wall, and the two pages endeavouring to restrain him; that this was the room where Don Fernando and his wife slept; that after they were in the room as above related, they sent this witness to call a friar of the Order of Mercy named Fray Bartolomeo, and to tell him to come and console Don Fernando, for his wife was dead, and also to tell Juan Suarez of Doña Catalina's death, and that he was not to go there, for that his importunities had been the cause of his sister's death. That he was sent to deliver these messages by A. de Villanueva, the valet, and D. de Soto, the mayor-domo, who said they were the orders of Don Fernando. Being asked what were the words which passed at table between Don Fernando and Doña Catalina, which caused her to get up and go to her room weeping or in a pet, he replied, that when Don Fernando and Doña Catalina, and other ladies and gentlemen, as above mentioned, were at supper, Doña Catalina said to Solis, then a Captain of Artillery, 'Nothing will serve you, Solis, but you must employ my Indians in other matters than what I order, and I cannot get what I want done'; and that to these words Solis replied, 'I, Señora, do not employ them; there is His Worship who orders and employs them'; and that she replied, 'I promise you that before many days I shall arrange matters so that nobody shall interfere with what is mine'; and that Don Fernando answered and said, 'With what is yours, Señora? I do not want anything of yours'; and this he said as in joke, but the other ladies laughed, and Doña Catalina felt ashamed (*se avergonso*), and retired as above stated."

Maria de Vera merely corroborates the others. Maria Hernandez, wife of Francisco de Quevedo, says:—

"That on one of the days in the month of October about All Saints' Day, in the year 1522, Francisco de Quevedo, the husband of this witness, told her that Doña Catalina Suarez had gone to church, that day a very genteel woman, *muy gentil muger* (i. e. very well got up), more than on other days, and that that same night, being in the city of Coyacan at the feast at Don Fernando's house, the said Doña Catalina had danced and enjoyed herself until a matter of 10 o'clock at night, and that at 11 o'clock of the same night it was said that the said Doña Catalina was dead, and that this was told to this witness by Christopher Corral, Captain of the Guard of Don F. Cortes. That the day on which Doña Catalina Suarez was found dead in the morning, this witness heard the bells toll, and asked for whom they tolled, and seeing a servant of Don Fernando Cortes pass, who was his *maestre sala* [the servant who announces visitors and shows them the way out, but in a household like that of Cortes probably an official of some importance], "who was called Manuel, who was dressed in a mourning cloak, and this witness asked him for whom he was in mourning and for whom the bells were tolling, and he told her that Doña Catalina was dead, and that this witness, suspecting that Don Fernando Cortes had killed her, said to Gallarda, a neighbour of hers, who was a midwife, that they should go and see Doña Catalina Suarez how she had died, and that this witness suspected and held it for certain that Don Fernando Cortes had killed Doña Catalina, his wife, for Doña Catalina had much conversation and friendship with this witness, because they had known each other in Cuba, and Doña Catalina, oftentimes telling this witness of the unhappy life which she passed secretly with Don Fernando Cortes, and how he often pitched her out of bed at night and otherwise maltreated her, said to this witness, 'Ah! Señora, wife of Quevedo, one day you will find me dead in the morning, judging by the life I pass with Don Fernando,—and that she held him in terror, and also, because in this city it was publicly stated that one Juan Bono, master of a ship, came one day to where Don Fernando was, having come from Castile, and said to Don Fernando, 'Ah! Captain, if you were not married, you might marry the niece of the Bishop of Burgos,'—and they say that he brought letters from the Bishop; and that, owing to this

suspicion, this witness and Gallarda went to the house of Don Fernando at 8 o'clock, and found Doña Catalina Suarez, shrouded and placed on a bier in a room, and that this witness, with the said suspicion, went to her and felt her feet, which were uncovered, the which were not yet cold; that she appeared to be recently dead; and this witness told Gallarda to examine her well, for it appeared to her that she was not yet dead; and that this witness, in presence of Gallarda and other women who were there, removed the shawl which Doña Catalina had over her face and saw that her eyes were open and stiff and protruding from their sockets, as of a person who had been strangled, and that her lips were thick and black, and that she had also two flecks of foam in her mouth, one on each side, and a drop of blood on the shawl where it had covered her forehead, and a scratch between her eyebrows, all of which appeared to this witness and to Gallarda to be signs that Doña Catalina had been strangled and had not died a natural death; and so it was publicly said that Don Fernando Cortes had killed Doña Catalina Suarez, his wife, in order to marry another woman of higher station, and that the said Christ. Corral, Captain of the Guard of Don Fernando, told this witness that Don Fernando after the death of Doña Catalina had gone into an orchard one day, dressed in a velvet coat, and walking up and down in the orchard said to Corral, 'What think you, may a man now marry whom he pleases?' And for this reason this witness suspected and still suspects that Don Fernando Cortes killed Doña Catalina, his wife, and so it is held for certain in this New Spain."

Here the evidence closes. There is none tendered on behalf of Cortes; the process seems to have gone no further, and we are left to form our conclusions from the one-sided materials brought against him. Is he innocent or guilty? Not—innocent or guilty according to human laws; but in our hearts do we think that he did the deed or not? The presumption of law is that every man is innocent until he is proved guilty. No such presumption can be imported into the judgments of posterity—all legal rules are by it disregarded, and the moral evidence, or intuitive conviction, is the test by which, whether we like it or not, our actions will be judged of by posterity. Disregarding, then, all the objections which a lawyer could bring against the Interrogatories as leading questions against the answers as hearsay, and against the whole procedure as contrary to all principles of fair play, let us address ourselves to it as it stands, and see what it is worth. And, first, is the testimony of the witnesses true or false? To this, notwithstanding the long delay in bringing the charge—seven years, and notwithstanding the family party of which they seem to be composed, two Rodriguezes and three Hernandezes, who besides seem to have married interchangeably, we have no hesitation in expressing our conviction that it is more true than false. Some portions are obviously either untrue or irrelevant; for instance, the black marks upon the throat must be untrue if they are to be attributed to Cortes's manipulation that night, because it is inconsistent with physiological experience that an ecchymosis, or black mark, would show itself so rapidly as within an hour from such pressure as strangulation. A sharp blow on a bony part, such as the cheekbone, will raise a black mark instantly, but the effects of mere pressure on a soft surface like the neck ought not, in such a short period, to have gone further than redness, or if the squeeze had been excessive, redness tending to brownness with excoriation. If, therefore, black marks on the neck were present, they regarded not Cortes, who could not have made them at the time specified. But, taken as a whole, the evidence reads as truthful; the very futility of the

† This is inconsistent with the statement in the previous witness's evidence, that she said she was jealous because her husband feasted other ladies, the invitation, in this instance, having come from her, not from her husband; but the inconsistency may have been in Doña Catalina's own statement, not in the evidence of the witnesses:—a jealous, passionate woman is not bound or expected to be consistent.

grounds of suspicion, often going no further than, "they say," "it was everywhere said," &c., indicate a gossiping, credulous nature, but not a false or designing one. Taking, then, the details given as in the main truthful, what do they indicate? Is it strangulation? Were it not for two trifling and incidentally mentioned circumstances, we might have had to reply, the symptoms are all those of strangulation. Most fortunately, the last witness adds to her description of the gorged countenance, protruding eyes and black lips of the deceased, "*she had two flecks of foam in her mouth, one on each side.*" Here is the key to the whole case. This is no symptom of strangling, but it is the almost constant accompaniment of a disease which simulates most of the tokens of death by strangling, namely epilepsy. There is not a symptom mentioned which does not accord better with epilepsy than strangling. Even the black marks on the throat now become intelligible; they are the gorged veins of the throat standing out in relief; and these, as we have pointed out, as well as the flecks of foam, are inconsistent with strangling. If to this we add, that Ana Rodriguez, her lady's-maid, says in connexion with her supposition that she had swooned, "*for she was subject to fainting fits,*" we have it all before us as clear as day. The fainting fits were epileptic fits, one of which, at last, carried her off. The whole of Cortes' behaviour is to us also symbolic of innocence; his lively *badinage* at supper, his attitude, supporting his wife on his arm, when the witnesses enter, his grief at her death, his haughty refusal (particularly when prompted and supported by the first Alcalde, obviously a toady and flatterer) to pay heed to the evil tongues of the city, knowing his innocence as he did, all bear to our minds the perfect stamp of naturalness and innocence. "Not guilty, upon our honour!"

Cortes was peculiarly lucky, or unlucky, in having his enemies die off at periods critically fortunate for him, but after so complete a disapproval of the most circumstantial and by far the most heinous charge,—for no one would think of comparing, in enormity, the "wiping out" of a rival or an enemy with the deep damnation of throttling his wife in his very bed, while sleeping in his arms, in all the confidence of love and affection,—we are ready to accept Prescott's verdict with more confidence. In fact, we cannot help thinking the publication of these 'Archives' a most fortunate circumstance, were it for nothing but the clear, unwitting (and, therefore, more valuable) acquittal upon this the most serious charge.

Vernon. Semper Viret. Memorial of Admiral Vernon: From Contemporary Authorities. By W. F. Vernon. Printed for Private Circulation. (Dalton.)

In King William's days there was no more efficient public servant than Jemmy Vernon, the Secretary of State. He was one of the most industrious men of those not inactive times. He was a gentleman; had satisfactorily filled the office of private secretary to the Duke of Shrewsbury,—and this fact reminds us, that he not only had the reputation of writing more letters, and in a better style, than the most epistolary of his contemporaries, but that his long and confidential correspondence with the Duke, extending to several quarto volumes, are in the possession of the Buccleuch family.

Let us pause for an instant, to point out that in such a correspondence as the above must be buried much of the social and political history of the period. Of its interest no one can doubt. The secretary was in the Duke's entire confidence, and the peer was a man of most especial

mark. His father and his brother had been murdered in duels. He was the youngest and among the ablest of William's ministers; and Queen Mary is said to have looked with eyes of more than Platonic affection on her husband's ultra-Whig secretary, who was accomplished, gentle, seductive, and—had but one eye. He was the opponent of his colleague, Nottingham, the adversary of the unscrupulous Caermarthen; and after having repeatedly done battle with those vehement Tories, and once, with tears in his eyes, implored William not to carry out his intention of leaving England, he himself left his party, and secretly entered into communication with King James. Scandal says that Sarah of Marlborough loved him even more fondly than the Queen; and we know that whatever tender homage this unstable yet great man paid to either of his mistresses, he betrayed both his masters. Yet he was a man of conscience, and hated his treason. The King's clever and ugly mistress, Elizabeth Villiers, helped to win him back to his old principles, and William raised him from an earl to a duke, on his re-accepting office, thereby securing him as a faithful friend for ever, only that Shrewsbury's wounded conscience disabled his willing service, and ultimately drove him from his office and his home. Long years of self-imposed exile he spent abroad,—of exile and of expiation, for there, the man who had served two religions, as well as two kings, married, or rather was married by, a termagant Italian countess, who accompanied him to England, and crumpled all the rose-leaves of the conjugal home. In that home the confederates had met, and thence invited William to repair to England. Thence Queen Anne drew him to become a loyal servant of her own and of his country. On the day of her death, Shrewsbury held three offices which no man before or since his period ever held at the same time,—Lord High Treasurer, Lord Chamberlain, and Lord Lieutenant of Ireland. By placing the white wand of Treasurer in the hands of Shrewsbury, Anne overthrew the designs of Bolingbroke; and the former nobleman won the regard of King George for hearty service rendered at a critical moment.

With this Duke, his old ex-secretary, James Vernon, maintained a correspondence. In one circumstance, the two men were equal: they were matched by termagant wives. James Vernon was the less vexed husband of the two, and, of rare mental endowment himself, was blessed in his children, especially in his son Edward. For him, he fondly beheld in the future the woollack and the seals. But what chance of achieving such greatness was likely to be cared for by the lad himself, who, albeit steeped to the lips in learning, was, even at Westminster School, popularly designated by the term of "The Admiral"?

That name indicated a bent, to which his sorrowing sire was wise enough not to do violence; and the young scholar, being now intended for the sea, was despatched to the University of Oxford "to study mathematics, navigation, and geography." At the age of seventeen, in the year 1701, young Vernon entered the Navy, admirably qualified in head and heart, knowledge and pluck, for every emergency that might there present itself. Nearly all Vernon's naval triumphs are connected with public-house signs. At Greenwich there towers over the river that comfortable caravanserai, the "Ship Torbay." The Torbay carried Vernon into Vigo Harbour, in 1702, under the flag of Admiral Hopson, the ex-tailor boy of the Isle of Wight, who, like Vernon himself, had thwarted the ambitious views of his sire in taking to the sea. Thirty sail-of-the-line and above a score of Spanish galleons were

destroyed on this occasion by Hopson's force. Of the fun, which was mingled on this occasion with abundance of horrors, the biographer of Edward Vernon appears to know nothing. Indeed, his book is little more than a crude register of facts and dates, with some assertion touching the virtues of his great ancestor. The comic side of the affair at Vigo lay in the despairing effort of the galleons to repel the enemy by flinging at them the snuff with which some of them were laden. Some of our boarders' heads were nearly blown off by sneezing, and their ribs seriously shaken by their laughter.

Altogether this was a very "jolly" opening of a maritime career, which, in many of its instances, will remind the reader of that of Lord Cochrane. The two seamen, in two respective centuries, afford more than one parallel. Vernon, as a youth, won renown under the ex-tailor, Hopson, and the ex-shoemaker, Sir Cloudesley Shovel. Queen Anne was so pleased with his bearing at Gibraltar, under Rooke, that she presented him with "a purse of two hundred guineas from her Majesty's own hand." The French and the Spaniards learned to fear the man and to respect his name and character. So did the Ministers at home when he became Member for Penryn. Sir Robert Walpole never had a more redoubtable and uncompromising opponent. Vernon resolutely exposed the evil administration of all naval matters; and this he did in such rough and fierce, albeit truthful, fashion, that when the arrogance and cruelty and treachery of Spain had rendered war inevitable, and Captain Vernon declared he could destroy the great Hispano-American settlement of Portobello with half-a-dozen or so of ships and a very moderate numerical force of men, Ministers took him at his word, for the sake of getting rid of him, and sent him to sea in ill-manned and worse-provisioned tubs, caring—so it was said—only for one thing,—that the leader might come to grief, and a thorn be taken out of the smarting sides of the Government.

Portobello, however, was to the energetic and censorious Admiral what the Basque Roads were to Cochrane—the chiefest glory, often contested, of his life. He did his work there "*thorough*," in November, 1739. Into the details, it is not necessary for us to enter. How the triumph was appreciated may be guessed from the many "Vernon's Heads" and "Admiral Vernons" which still swing on public-house sign-posts, or look dusily down upon us from tavern-walls. The name of Portobello was not only in every mouth, but the cities of the empire adopted it in one shape or another. The Portobello Harbour and Hotel exist in Dublin, mementos of old glories. At Portobello, Edinburgh citizens still enjoy a rural and marine leisure; and a Portobello Farm has only recently been swept away from once rustic Bayswater, but the name survives on its site in Portobello Square. For years the people celebrated the Admiral's birthday. As two different dates were assigned to this event, the populace turned it to their advantage; the streets resounded with marrow-bones and cleavers, unilluminated windows were broken, and the aforesaid populace got drunk and beat their wives twice a year, in honour of the Admiral and his natal days.

The doings—less complete, yet not without their glory and profit—at Carthage and Cuba followed; and when the triumphant sailor returned to London, in January, 1743, thirty chests of treasure, each chest containing ten thousand pieces-of-eight, accompanied him to the capital,—the substantial trophies of, after all, dearly-bought conquests.

Sir Robert Walpole was no longer in office; but as Vernon presumed to publish his opinions

respecting the necessity of naval reforms, and of engaging, not pressing, seamen, and therewith keeping faith with them, the Lords of the Admiralty snubbed and insulted the dauntless warrior; but his services were eagerly required when the 1745 invasion was threatening the country. By his vigilance and judicious arrangements, Vernon seems to have frustrated the French design to put to sea against us; but—

“all this time the enemies of Admiral Vernon had been using their influence against him at the Admiralty, hinting that he was not as vigilant as he should be, and did not keep a proper look-out on the French coast; and many letters were written to him upon this subject by the Secretary for the Admiralty, finding fault with him for nearly everything he did, and especially for having warranted a gunner on board the *Pool*, which the Admiral was about to send upon an expedition, and which ship was without that very necessary officer; the Secretary informed him that my Lords did not approve of his having appointed the gunner, and directed that he would withdraw the warrant. This order the Admiral refused to obey, and tendered his resignation. And on the 1st January, 1746, struck his flag, and handed over the command in the Downs to Vice-Admiral Martin.”

—The head of those ungrateful and unreasonable “my Lords” was John, fourth Duke of Bedford of the Russell line, the ducal patent of whose great-grandfather, the first Duke, was drawn by the hand of Vernon’s father, when Secretary of State, in a manner “much commended for the elegance of the style.”

As the Admiral’s enemies reported that he had been dismissed for inefficiency, Vernon defended his character and destroyed that of the Admiralty Board by publishing two pamphlets, which gave great offence to the powerful adversaries whom he mercilessly pummelled in his parliamentary speeches. The pamphlets were anonymous, and the Duke and his colleagues in vain endeavoured by letter to wring from him an admission of the authorship. At length, in 1746,—

“upon the 10th of April, upon Admiral Vernon’s coming from the House of Commons, a messenger met him at the door, and told him he had a message to him from the Admiralty Board, to attend them at their office at seven o’clock, which he said he would not fail to do. The Board consisted of the following members:—John Duke of Bedford, Earl of Sandwich, Lord Archibald Hamilton, Lord Vere Beauclerc, G. Anson, G. Greville, H. Legge, Esq. Upon Admiral Vernon coming in, when sent for, after having waited without a considerable time, the First Commissioner told him, ‘That they were the Admiralty Board, that in them was vested the full power of the Lord High Admiral; and that he, as the first in the Commission, was the head of that Board, and the mouth of it; and that what he should say to him was the sense of the whole Board, and therefore desired he would give diligent attention to it; and that they would have him give a direct answer to what they should require of him; and that he should attentively hear what he had to say, and not interrupt him. His discourse then rolled upon two pamphlets he had upon the table before him, which he read the titles of, being ‘A Specimen of Naked Truth,’ &c., and ‘Some Seasonable Advice,’ &c., and exclaimed much against them; and mentioned two letters their Secretary had wrote to him by their order, to know from him whether he was the author or publisher of them, and expressed himself surprised and dissatisfied with a letter of Admiral Vernon’s he had before him in answer to the Secretary; the style of which, he said, was very extraordinary, and no answer to the question they had directed to be asked; but that they expected a categorical answer, and that he should say *Aye* or *No*, whether he was the author or publisher of those pamphlets.’ When he was called upon to answer, he said, ‘He was very well apprized that in them was vested the full authority of the Lord High Admiral; and that as a Military

Officer under them, he owed all obedience to all their orders, as he should always think it his duty to do all their military orders while he continued an Officer in the public service; and that he thought he was right, in hinting in his letter to the Secretary, that he believed no Military Officer of his rank had ever been treated in the manner he had been within the term of his long experience: That for all questions that should be asked, relative to his duty or experience as an Officer, he should answer to the best of his judgment; but as to the question now asked, as he looked upon it to be of a private nature, that he apprehended they had no right to ask him that question; and that he was under no obligations of answering it, but had the common privilege that was due to every British subject; and that if his continuing an Officer in the service was an eye-sore to any one, that he was now grown to be an old man, and had reason to be tired with being treated in so contemptuous a manner.’ Upon which, the First Commissioner said, ‘If he would give them no other answer to the question, he might withdraw, and they knew what they had to do.’ Which, with his obeisance, he did accordingly. The next day Admiral Vernon received the following letter:—

‘11th April, 1746.

‘Sir,—I am commanded by my Lords Commissioners of the Admiralty, to inform you that the several matters which passed between their Lordships and yourself, with relation to two pamphlets lately published, entitled, ‘A Specimen of Naked Truth from a British Sailor,’ and, ‘Some Seasonable Advice from an Honest Sailor,’ to whom it might have concerned, for the Service of the Crown and Country,’ having been laid, by his Grace the Duke of Bedford, before the King, his Majesty has been pleased to direct their Lordships to strike your name out of the list of Flag Officers.

—I am, Sir, Your most humble servant,

‘T. CORBETT.’”

The disgraced Admiral was never again officially employed, but he continued vehemently, at times too vehemently, eloquent against abuses, in the House of Commons; liberal corporations sent him diplomas of “freedom,” and the public in general respected the daring Member for Ipswich, who made Ministries shake in their shoes. They found peace when he died, suddenly, in October, 1757.

His descendant has been well advised to furnish these memorials for his biography. When the latter has to be written, the author will have to consider his hero with less undisguised and unreserved partiality than Mr. William Vernon. This latter gentleman avoids the difficult passages in the career of the swarthy little hero of Portobello. He ascribes the fall of Walpole to the successes of the popular Admiral beyond the Atlantic. That fall was rather accelerated by the failures of Vernon in that quarter. Our biographer alludes to the Admiral’s dissatisfaction with Brigadier Wentworth; but the truth is, that the Brigadier very properly refused to make a useless sacrifice of his men, and when Vernon was rash, opposed to the seaman’s recklessness a sagacious coolness. Vernon talked loudly enough against his soldier-colleague in the West, and Horace Walpole prophesied a challenge, without expecting a fight. Horace sneers at the Admiral as one who made no profession of personal valour, and accuses him of having once been knocked down by a merchant who offered him satisfaction; “but,” says the great letter-writer, in his epigrammatic way, “Vernon was satisfied!”

Here, however, it must be remembered that Horace is writing of his father’s arch-enemy. He calls him a “simple, noisy creature,” but he acknowledges the excellence and the success of the Admiral’s plan for watching the coast of the enemy, in 1745. Walpole laughs at him for the frantic fury of his speeches; but when we hear of Vernon asserting, that “there was not

a nation on this side hell so burdened with taxes as England,” we too recognize a frenzy and a fury in his speech. We have said that Vernon’s triumphs were sometimes dearly bought, and therefore we mark some truth as well as satire in the observation of Walpole that for the honour of having Admiral Vernon’s head on public-house signs, the nation paid seven millions of money and thirty thousand men. Walpole certainly ridiculed the man whom he abhorred, because he believed in his treachery. Of the bust of the Admiral at the Duchess of Marlborough’s “house in a saucer,” at Wimbledon, he said that it had as many lies inscribed beneath it, as if it had been a tombstone. The truth as Walpole saw it was, that Vernon betrayed to Pulteney, the most envenomed of Sir Robert’s antagonists, the instructions imparted to the seaman by Sir Robert and his official colleagues. Pulteney is charged with advising Vernon, after the affair at Portobello, to attempt nothing more, in order that his inactivity might bring down censure on the Walpole administration. However this may be, the Admiral assuredly disregarded the counsel, and did the best he could for his country. He was not exempt from human error, but his failings are not to be much accounted of when we reckon his achievements. He will live in the annals of the Navy, the poetry of Thomson, and, as Horace Walpole himself intimates, “in our medallie history.” Horace may have set this down in a gibing humour, but it is not an incorrect statement. The medals count by hundreds which were struck in his honour; and his memory survives almost as enduringly in the term “grog” which the sailors applied to the watered rum, first ordered by him to be served out to his crew, in 1745,—a dilution which the “Jacks” admired as little as they did their Admiral’s program breeches, whence they derived the well-known epithet.

The Church History of Scotland, from the Commencement of the Christian Era to the Present Century. By the Rev. John Cunningham. 2 vols. (Edinburgh, Black.)

THE recent Tricentenary of the First General Assembly of the Presbyterian Church (Dec. 20, 1560) has added to our literature, if not to our knowledge of ecclesiastical affairs in Scotland. However, in the mean time, general attention has been directed, in connexion with it, to many important questions. Unless the movement evaporate in mere speeches and unlimited self-laudation, or if popular prejudices prevent a full and free discussion, good may be anticipated from a revival of historical interest. That there is abundant room for such inquiries, and that more than one chapter of Scottish Church History remains yet to be written or rewritten, appears even from the works which have been noticed in these columns within the last few months. To their number we have now to add two volumes, which contain the first complete and continuous Church History of Scotland from the planting of Christianity to the disruption of the Scottish Ecclesiastical Establishment in 1843.

A work of such magnitude and interest claims more than a passing notice. Without adopting Mr. Cunningham’s hyperbolic comparison of the Church of Scotland with the ancient Jewish, or with the Romish Church, it may safely be asserted, that in no other country have ecclesiastical affairs occupied so prominent a place, or contributed so largely to political events and to social life. Besides, more than a merely national interest attaches to this history. In one important aspect, the history of the Kirk

is that of Calvinism itself. Of the two great questions which every ecclesiastical system has to encounter, one, at least, was elaborated and decided in Scotland. If the internal or doctrinal differences to which Calvinism gave rise were settled at Dort, in Switzerland, or in France, Scotland alone afforded the requisite opportunities for discussing the other and no less important problem—that of the right relation between the Reformed Church and the State. Accordingly, almost, if not all, the controversies in which the Kirk has been engaged were more or less directly connected with that question. Nor has the discussion been yet concluded. At this very moment, a dispute, pending before the law courts of Scotland, is presenting the old controversy under a new form, and agitating the public mind as deeply as at any previous period. The reason of all this is palpable. In no other country or community which adopted Calvinism was a full development of its principles concerning Church and State possible. It is well known that in Geneva itself Calvin had to submit to many arrangements and limitations contrary to his wishes, and imposed, as he expresses it, by “the infirmity of the time.” The only other strictly Calvinistic churches on the Continent—the Huguenots in France and the Contra-Remonstrant party in the Netherlands—were prevented by political circumstances, if not from asserting, yet from consistently carrying out the principles of the Genevan reformer. But in Scotland no such difficulty existed. Partly from the weakness of the monarchy, and partly from the intensity and generality of popular sympathy, the views of Calvin could be strictly carried out, not merely in matters of belief, but also of practice. Indeed, if in respect of the former there seems occasionally a slight approximation to the peculiar views of Zwingle, no such compromise was ever proposed by the high Calvinistic party in Scotland on any question connected with Church and State. On this point, the difference between Calvin and Zwingle is much more marked and fundamental than in dogmatics. The Zurich Reformer and his followers disclaimed all independent authority on the part of the Church, and adopted the principle of the absolute supremacy of the State in ecclesiastical matters. The position of Calvin and of the leading party in the Church of Scotland was equally clear in the opposite direction, although not quite so consistent. In practice, neither the Reformer of Geneva, nor his disciples in Scotland, adhered to those principles of entire distinction between secular and ecclesiastical matters which both laid down as the right theory on the question. Abundant evidence could readily be furnished, that while Calvin maintained the entire separation between spiritual and secular jurisdiction to the extent of illustrating it by the difference between soul and body (Instit. iv. 20, 1), he, at the same time, enforced the Divine obligation of the secular power to watch over the purity of religious doctrine, and to visit offenders with condign punishment. In short, while his principles clearly embodied the modern High Church doctrine of the absolute independence of the Church in all ecclesiastical matters, his practice tended to the establishment of what we may designate a theocratic state, in which the secular power should be subservient to the ecclesiastical, or, at least, lend to it an offensive and defensive aid in carrying out its independent action. The same remarks apply substantially to the Calvinistic party in the Church of Scotland; and by the side of the well-known ecclesiastical adage about the “two swords” and “two kingdoms” (the secular and the ecclesiastical) we might place numberless instances in

which this entire separation was not observed in practice. Indeed, the entire history of these controversies within the Church of Scotland might be described as a gradual but continuous transition from the idea of the theocratic state, —maintained in all its fullness by the party of the extreme “Covenanters”—to the essential theoretical principle of both Genevan and Scotch Calvinism: the entire separation of ecclesiastical and secular jurisdiction.

It may appear strange that by far the most distinct enunciation of this principle proceeded, not from Geneva, but from a party which the Reformers held in as great abhorrence as ever Churchman did close-cropped Puritan. Wild fanatics as the Anabaptists and many other sectaries of that period were, there appeared in their conventicles men whom persecution, if no gentler teacher, had convinced of the need of more tolerant principles, and of less State interference. Outside the pale of the Protestant Churches they had, perhaps, better opportunities for observing what they deemed the baneful effects of “Caesareo-Papacy,” while no room was left for doubt as to the enlightened zeal and the tender mercies of an “evangelical magistracy.” It is positively refreshing to turn from the small arguments of Bullinger, the representative of Zwinglianism, and even occasionally from the reasoning of Calvin, on this point, to the broad and tolerant appeals of a Schwenkfeld, whose views, by the way, are not sufficiently known. We have dilated on this subject, not only on account of its interest and of its frequent misrepresentations, but also from its important bearing upon the history of the Church of Scotland. It is not too much to say that without a knowledge of the internal history of Calvinism, Scottish ecclesiastical affairs—however accurately described—can neither be rightly appreciated nor properly presented.

Unfortunately, the defects of Mr. Cunningham's work are not limited to want of general ecclesiastical knowledge and of historical insight. Here and there we indeed catch a glimmer of light, but it speedily disappears. The style of the book, which descends from extreme stiffness to not unfrequent vulgarisms, may almost be taken as an index of the history itself. While those parts where abundant materials are accessible to the student are carefully and even minutely discussed, others, where original and thorough investigation was most required, are cursorily and superficially treated. Few readers will be satisfied either with Mr. Cunningham's account or with his judgment of the Culdees; nor, indeed, will their knowledge be much increased by his narrative of ecclesiastical affairs previous to the Reformation. Of course, an historian is at perfect liberty to form and state his opinion of persons and events, providing he furnish the reader with sufficient materials to arrive at an independent judgment. Thus we are not disposed to find serious fault with Mr. Cunningham either for his apology on behalf of Cardinal Beaton, or for his defence of the Queen Regent, Mary of Guise. Suffice it, that in view of the facts, the majority of readers will probably arrive at a very different conclusion. But it is otherwise,—and we have reason to complain when only one side of a most important question is set before us, and a verdict pronounced in opposition to what is commonly, and, we think, justly believed to be historical truth. Before accusing Wishart of complicity in the murder of Cardinal Beaton, or Knox in that of Rizzio, we would require much ampler evidence than Mr. Cunningham, or, rather, Fraser Tytler—whom in these, as in other instances, Mr. Cunningham implicitly follows—has furnished. The accusation against Wishart—one of the gentlest and

most loving of men—rests solely on a similarity of name: a letter proposing the Cardinal's death having been despatched to King Henry by “a Scottishman called Wyssert.” The other arguments, such as the story of Wishart's dying prediction of the Cardinal's death—which everybody admits to be apocryphal—the Cardinal's dread of Wishart, and the Reformer's intimacy with the leading conspirators, who, of course, were the leading men of the Anti-Papal Party, scarcely deserve any notice. Besides, it is difficult to imagine that so important a personage as Wishart would have been described by his fellow-conspirators in such vague terms as in the letter to Henry. The charge against Knox, which Mr. Cunningham himself admits to be “debateable ground,” rests, if possible, on even more slender evidence, the only authority for it being an unauthenticated slip of paper pinned to a document in the State Paper Office, and which bears internal proof of being unreliable. And this in the face of facts which speak loudly in favour of the Reformer's innocence! A still more strange insinuation is that hazarded in a foot-note against the purity of Rutherford, another celebrated Scottish theologian, on the strength of a “rumour” which Mr. Cunningham does not even condescend to detail.

We have sufficiently indicated the grounds on which we cannot accept Mr. Cunningham's work as a final or satisfactory history of the Church of Scotland. In other respects, indeed, we are willing to accord our author the praise which his researches and compilation deserve. Some of the scenes and characters are vividly sketched, and the general interest is pretty well sustained throughout. Mr. Cunningham correctly hints the relation between Knox, the man of the people, and Andrew Melville, the man of the Church. The former was the founder of the Protestantism of Scotland, the latter of the strict Presbyterian Kirk. A more careful study of the character of John Knox would dissipate many of the prejudices against this truly great man, and show that he was possessed of much broader sympathies and more liberal views than is commonly supposed. In this respect he suffers almost as much from misrepresentation as his friend Calvin. Perhaps over-zealous disciples of the Genevan Reformer may start when we tell them, that so far from being an exclusive fanatic, Calvin was, in many respects, more tolerant; that he actually subscribed the Augsburg Confession; that, with certain modifications, he would fain have chosen a form of Church Government different from rigid Presbyterianism; that he looked with tolerance upon “apostolical succession”; and that he even approved of usages peculiarly distasteful to some who affect to be his followers.

Filippo Malincontri; or, Student-Life in Venetia: an Autobiography. Edited by Girolamo Volpe. Translated from the Unpublished Italian Manuscript, by C. B. Cayley, B.A. 2 vols. (Manwaring.)

THERE is a class of made-up, modern Italian books, neither fact nor fiction, in which we take small delight,—narratives of younger sons who have been neglected at home, or badly educated, or warped by despotic force,—confessions of the struggles of violent passions, laid out to the public gaze with the complacency of those who conceive that not only the struggle, but the passion is heroic,—glimpses of love adventures,—expositions of that contemptuous indifference to all spiritual things which burrows beneath the robes and behind the shows of Priestcraft. Such phenomena are the fruit of certain seeds, sown among those of a certain national temperament, and brought to

fruit-bearing life by a heat which withers as much as it cherishes; but they make, when wrought up as topics, an unpleasant group of books.—These volumes, to which Signor Volpe stands godfather, are fair specimens of the kind. They were written, the Preface tells us, on commission. It was hoped that by giving a real picture of the student life of an Italian youth, some contribution might be made to the steady and patriotic indignation which *must* end, one day or other, in leaving Italy free and strong to work out her future for herself.—The effect, however, on ourselves has been not so much to fix attention on the injustice which has marked Italian suffering, as on the peculiarities tincturing Italian character which have deferred the possibility of relief and deliverance, and which constrain the sincere well-wishers of that rich and beloved land still to look forward with anxiety.

We cannot, with the best of good-will, take interest in the fortunes of Filippo Malincontri, nor admire the style in which they are narrated. He fails to make us in love with his school pranks,—to distress us by the recital of the injustices suffered at college,—to kindle us with sympathetic warmth as he describes the charmers who crossed his path. These wear the air of *Cynthias* in a novel so vividly, that we take leave to fancy the entrance of romance, as well as of recollection, with this portion of his tale. His language, too, is inflated rather than earnest. The pages which we like best are not those which prove their writer to be a countryman of Alfieri and Ugo Foscolo, but those containing descriptions of scenery and manners—in which the student has no more prominence or interest than the figure in a landscape. The following is a favourable specimen—an account of the manner in which part of a journey betwixt Boscatti and Fiorasco was performed:—

"The first forty miles were to be performed not in a van, but on a *zattera*, or kind of raft. * * In those mountainous countries there are in some places at a great distance from the cities forests that may still be called primeval. Whole mountains are covered with the most ancient trees,—oaks, elms, and pines, which serve admirably for architectural and ship-building purposes. * * When the full flood-times come, in spring and autumn, the trunks—in this state called *borre*—are carried across vales, precipices, and defiles, upon the eddies of the rushing waters into the valley of Boscatti, in which there are establishments belonging to rich proprietors, where with large saws set in motion by the streams, the timber is sawed up into planks. These planks, after being tied together, are sent on, where the torrent is more abundant and acquires the character of a river, to be carried down to Venice. Here a great part of the wood is used for naval or general purposes, and the rest is dispersed by traffic over Italy, the Ionian Islands, and other regions. Now, these rafts are made by the inhabitants of a suburb of the city, who dwell upon the very banks of the stream—a strong, daring, adventurous folk, who are called *zattereri*. The mode in which the rafts are constructed is ingenious. A number of planks are brought together and arranged in parallel piles, and at the ends of the planks holes are bored, through which are passed strong and pliant ligatures, formed of vine-boughs plaited very tightly together—the same sort are also used by husbandmen to tie up their tools and implements. By these ligatures the stems are bound together in rectangular figures, about three or four times as long, and one and a half times as broad, as the single trunks are long; at each end of the structure two large oars are plied, and with these the raft is guided by the *zattereri* down the torrent towards Venice. In this way they take all sorts of goods, live-stock, and passengers, and carriers with their horses and their waggons. * * We got on board; a man had been

sent on in front of us with the cart and horse, and had stowed them away already, and we had only to take our own places. The heat of the summer had declined, and the fresh breeze over the water, coming from the mountains on an autumn morning, made my frame quiver and my teeth chatter, but I did not mind it. I was only intent on the novelty of the scene. The sinewy boatmen, with their athletic forms and bronzed faces, their daring countenances and singular costume; the passengers, who were about ten in number, men and women, (there being besides, two other carts and two other horses bound for Venice, to deliver butter and other commodities there, and to take back fish); the commotion incidental to the loosening of the ropes in order to start the raft (a somewhat difficult operation, which required the hands, the voices, and the dexterity of many persons controlled by one leader), all together rendered this moment extremely interesting and picturesque. The raft is now unmoored (who has to go goes, and who has to stay stays), and, upborne upon the riotous waters, as rapid as their eddies, it goes darting adown the river. * * Oh, it is a wondrous thing to float on a *zattera* upon a river, which, descending an inclined bed, rushes, and whirls, and seethes, and maddens in its career! The distances are swallowed up; varied scenes, fearful and lovely, replace one another every moment. Now you pass through a defile between two lofty mountains, which scarcely allow the water a narrow passage; now you go along with a goodly tract on either side of fruitful level; now through an expanse of shingle, which the torrent once devastated, when it spread, during the full flood-times, into an ampler channel; now you descry villages, now towns, which appear and disappear at a little distance from the banks; now you come across the ruins of old-world hills, which broke down, at an unremembered era, from the water's incessant action having many ages corroded and undermined their bases; and now you pass streams, that pour the tribute of their waters into the superior torrent, which with a ravenous snatch hurries you forward; and there, at the confluence, the water seethes and foams, and thence the torrent swells more and more, and the rapidity of its course increases, and it bears you downward aye more furiously. But all this is comparatively nothing. The raft is an object of still greater wonder. The ligatures, which connect the planks, are not drawn close and tight, but have play given them, according to the rules of art, so that they may yield, without breaking, to the reactions begotten by the impetus of the current. The raft is always represented by the *zattereri* in their *gergo* as a serpent, and like a serpent she comports herself. She turns round upon herself according to the tortuous course of the river, and seems to imitate a serpent slinking; she bends in front, and remains straight in the rearward part, just as a serpent might. She hisses when she breaks through the water, and grates and rumbles over a bed of shingle, where the water is shallow; now her joints are dislocated and creak horribly, as she almost doubles herself up in winding round a rock; now she clears the reaches with sharp, broken plunges; and now she threatens, in her coilings, to dash against a rock, and by a snap with her head evades the obstacle. All these marvels are effected by the four *zattereri*, who stand by the four oars. You feel sure every moment that the raft is going to strike a crag and be broken to pieces, or to run aground in a shallow, and remain immovable for many hours; or to be dismembered by the violence of its own movement; and all these perils are encountered and overcome every moment by the dexterity, the herculean strength, and the audacity of the *zattereri*, who with their four rude oars perform prodigies. In four or five hours they traverse a distance amounting, in a straight line, to about forty miles, but the route with all its windings would measure a hundred, or perhaps a hundred and forty."

There is not very much to distinguish the above raft-voyage from one down the Rhine or the Danube; but we have always had a curiosity for details of byway life in Italy,—fed on

such glimpses of it as we have been enabled to snatch. The absence of these gives a tiresome sameness to much modern Italian literature. Its authors are too apt to forget that there are such things as the chestnut woods in the Pays de Cadore,—as the tamarind trees that feather the wonderful coast-road betwixt La Cava and Amalfi,—as the obelisk-like cypresses which give such a peculiar stateliness to the approaches of Florence.—For characteristic pictures of these things, and of the life which goes on in its daily course and humour beneath them, we would gladly dispense with whole chapters about bruised hearts and burning sorrows, and stormy outpourings of rage. To find such pictures, however, we must look to foreign writers—to Madame Dudevant, to Herr Andersen, to Mr. Browning, and to the Author of 'Monte Beni.'

BOOKS FOR THE COUNTRY.

Glencreggan; or, a Highland Home in Cantire. By Cuthbert Bede. 2 vols. (Longman & Co.)

Memorials of Angus and the Mearns; being an Account, Historical, Antiquarian and Traditionary of the Castles and Towns visited by Edward the First, and of the Barons, Clergy, and others, who swore Fealty to England in 1291-6; also of the Abbey of Cupar, and the Priory of Rostinoth. By Andrew Jervise. (Edinburgh, A. & C. Black.)

The East Coast of England, from the Thames to the Tweed, descriptive of Natural Scenery, Historical, Archaeological and Legendary. By Mackenzie Walcott. (Stanford.)

How to Spend a Month in Ireland, and What it will cost. By Sir Cusack Roney. (Smith & Sons.)

The Antiquities of Arran: with an Historical Sketch of the Island, embracing an Account of the Sudrejar under the Norsemen. By J. McArthur. (Glasgow, Murray; London, Hall & Virtue.)

A Guide to the Isle of Man, with the Means of Access thereto. By the Rev. J. G. Cumming. (Stanford.)

Scrambles in Serk, Scenery, History, Laws of one of the Channel Islands. (Longman & Co.)

ALL the above works illustrate, in different degree, the moving propensities of the inhabitants of these islands, and the aids, more or less efficient, to enable them to "keep moving." The author of the work named first in the above list, has spent a holiday in a portion of Scotland scarcely visited at all by the excursionist, and he has compiled a book which may be a help to others journeying in the same direction. The manner of workmanship with respect to these volumes is rather singular. The traveller spent a few weeks in Cantire, two years since, and on returning home "read up" all that was published in reference to the locality: adding the results of his studies to the smaller ones of his experience, he builds up a pleasant compilation enough; but such work is very like that of a man who, having looked at a "twelfth cake," turns to the 'Complete Confectioner' to describe its contents, to the newspapers for incidents of unlucky children poisoned by sucking the ornaments, and then fancies he alone has done it all. The compiler, indeed, not only lays all preceding writers under heavy contribution, but, in some cases, inserts old criticisms of their books. On other occasions, he goes out of his way altogether to have an ungenerous fling at a contemporary author in the South, and he sneers at a certain popular poet as indignantly as if he were a parson penning slang stories under a pseudonym.

The case is worse when the writer ungallantly descends to be rude to a lady, a well-known author, whom he alludes to as "a gushing party," but from whose book he is not too nice to borrow a very good story when he has none of his own to tell. Indeed, when trusting to himself, he is often either dull or flippant, sometimes very contradictory. "Calvinism and cleanliness are opposed to each other," is a judgment pronounced in one page, while in another, Greenock is described as "no copy of dirty Wapping, but a shining, fresh and clean seaport that worthily bears its honours as the first in Scotland."

Then, the compiler would have done much better, if, instead of transferring old jokes, he had developed old history, such as that of the Bissets and the Macdonalds. Lord Bisset, the murderer of the Earl of Athol, was allowed by Henry the Third to settle in Ulster, but his descendants forfeited their possessions under Edward the First. The McDonalds of Cantyre claimed and obtained the lands of their kinsmen, and Glenarm, near Dunluce Castle, is the seat of their descendant, the present Earl of Antrim. This remarkable episode might have furnished matter for an interesting and instructive chapter illustrative of social manners in bygone days.

Again, this writer indulges in the habit, when he is growing dull, of dragging in some capital joke which has often before done satisfactory duty. His pages first opened before us at a story which we ourselves quoted, long, long ago, from Dean Ramsay's well-known book. He has also an alacrity in adopting old prejudices, or in indorsing assertions made by persons ignorant of the subject on which they are writing. "Romanism and dirt are known to go together," he remarks, according to the ideas of the ante-emancipation period. We had thought that such nonsense no longer "obtained."

These shortcomings apart, 'Glencreggan' is really an acceptable book, with evidences that the compiler has qualifications to achieve much better work than he has accomplished here. The illustrations are excellent, especially the small woodcuts; and with this notice we commit our travelling readers to the guidance of Cuthbert Bede; unless they be half afraid to trust a "conductor" who, standing at Greenock, waiting for the steamer, exclaims, on beholding it, "Here comes our boat, the Celt, greatly puffing from the effects of her run up from Glasgow." Uneasy shades of once verdant cockneys be appeased! Never again may those who have satirized you, affect to laugh at your old solecism of running up the river, from London to Gravesend.

With Mr. Jervise, we fall into grave company. His volume is not a guide-book, but it is one which no explorer of Angus and the Mearns should be without. It not only leads the traveller through the castles and towns visited by Edward the First, but it makes him acquainted with the barons, clergy and others who swore fealty to the English King, when they could not well do otherwise, or had not spirit enough to resist. With this little work in his hand, a wayfarer may wend to a really valuable purpose; every inch of his way will be rendered pleasant, and at every minute he may, if he be so minded, learn something that is new, and, what is more, something worth remembering. In such a volume, we are almost surprised to find what we believe to be an error. In speaking of Claverhouse, Mr. Jervise says, "his body was buried in the Athole family vault, at the church of Blair Athole; but no stone marks the spot: indeed the site of the vault itself is now very much a matter of

conjecture." Dr. Macculloch, who lived so many years, the familiar friend of the old Duke, in the house at Blair, says that Dundee was "buried in the churchyard," where we have seen a solitary grave pointed to as that of the "terrible Clavers." The family histories in this able volume will be thoroughly appreciated by genealogists.

We return now from the North to place ourselves under the guidance of Mr. Walcott. It was a good idea to trace the whole east coast of the island from the Thames to the Tweed, and the compiler has executed his work creditably, in a business-like way—like a faithful cicerone anxious to tell all he has learnt, but in no way enthusiastic on whatever subject he may happen to touch or strive to illustrate. The only really original portion of this volume is its dedication to the King of Denmark, "by his royal and most gracious permission": on the ground, it would seem, that on this eastern coast "the Danes have left so many traces of their name, influence and prowess." To say the least of it, this *homage* is droll. The Danes made their appearance in England, as ferocious invaders, just as the kingdom had made some first progress in order and civilization. Their only object in coming hither was plunder, after burning and murder. They were not moved by any ideas of colonization or commerce. They exacted from kings and people sums which could now be represented only by hundreds of millions, and they destroyed utterly whole cities, on this very coast, in revenge for outbreaks of patriotism on the part of the exasperated and impoverished people. Pillage and bloodshed marked their presence, and crushing tributes made the memory of them execrable, when absent. Little wonder is it that the chiefs of these men of name, influence, and prowess, were unable to exact feelings of attachment from the English, when they ruled over them as kings. The English king Ethelred forfeited the allegiance of the people who volunteered to save England from the invader, simply because he did not oppose that invader with ceaseless energy, refusing to despair. Under the very best of those foreign kings, the people were ground to the earth by exorbitant taxation till the victims broke out into insurrection, and then the brutal Hardicanute laid waste whole counties. The joy of England at his death showed the sense in which the nation accepted that relief; and because of the peculiar nature of the influence and prowess from which the country was thankful to be relieved, Mr. Walcott asks, and is, of course, graciously permitted, to pay his modicum of Danegelt, in the shape of a dedication to the King of Denmark. Since Lieut. Royer was so delighted, in the Odessa Theatre, to look through the opera-glass, by means of which Osten-Sacken had viewed the destruction of the Lieutenant's ship, the Tiger, we hardly remember such simplicity as this exhibited by Mr. Walcott. If a French modern compiler of a guide-book through Gascony were to dedicate his work to Queen Victoria on account of the name, influence and prowess of the English in that land in bygone years, he would run a chance of being stoned for his very bad taste; and yet Gascony was so thoroughly English-loving for years subsequent to the disappearance of the English there, that, as we recently showed, the French King had more trouble in keeping that province in order than all the rest of France besides. If not as an Englishman, at least as an Oxford man, Mr. Walcott might have remembered that in 1012, that university-city was destroyed by the Danes, and all studies interrupted for more than twenty years. We do not suppose that, there-

fore, the Oxonians cherish the memory of Sweyn—or that they will be grateful to Mr. Walcott for thanking the King of Denmark for the rapine, violation, arson and murder consequent on the presence of the Norsemen in England.

The Danes were influential and powerful also in Ireland, but Sir Cusack Roney does not thank the Majesty of Denmark for it by a dedication. The knight's book is a useful prospectus for excursionists taking a monthly ticket-of-leave to repair to and return from Ireland within the period mentioned.

To travellers who love to have the exploration of a small island to themselves, a choice is given in the last three books on the list at the head of this notice. In Arran, the fair island at the mouth of the Frith of Clyde, the wayfarer may pass a profitable week with Mr. M'Arthur's book in his hand. The volume embraces a wide range of history, from the days of the Allophyliæ down to the present hour, including the period when no less a personage than Louis Napoleon was biding his time and smoking his cigar in the Castle of Brodrick. There were such stirring folk here in the old ages, that we find a quiet man made as much of when dead as was made of Lucretia in contradistinction to the less worthy ladies of Rome. The quiet man of Arran was a John Fullarton, of the last century, whose epitaph announces that

This was the man who, free from toil and strife,
In his own ground did pass his peaceful life.

The Isle of Man is better known to most of us than Arran; but for those to whom it may be a *terra incognita* Mr. Cumming has provided a very excellent "guide." We know of no man better qualified to compile such a work. His knowledge of the locality and of all matters connected therewith is probably superior to that of many born Manx men. His larger work, published in 1848, is highly appreciated still, as it well deserves to be; but the present volume is more portable; we cannot speak too highly of it. Mr. Cumming dedicated his former work to Bishop Vowler Short, translated from Man to St. Asaph. Since Dr. Short's time, three Bishops have succeeded to this diocese of the Isles—namely, Dr. Shirley, who held it but for three months; Lord Auckland, now Bishop of Bath and Wells; and the present prelate, Dr. Powys, son of Lord Lilford, whose ancestors were of the Welsh line of the Kings of Man. It is remarkable of this See, that not only is it the oldest in the British Isles, but that it has never lost the regular succession of its Bishops—a circumstance of which Manx Churchmen are legitimately proud.

The little Channel Island of Sark may be found fitting ground for a traveller who has not time to explore Man. He will be quite as much in a world altogether different from that which he has left within the metropolitan district. This may be gathered from many circumstances; not the least striking is that in which we are told that "the harbour beach was, till within the last few years, the one post-office of Sark, and oftentimes each islander his own postman, coming down, if he expected letters, to look for them on the shore. Great opposition was made to any alteration, as a breach of the feudal system." Venerable institution! It is, however, giving way; for the prevailing vice is drunkenness, owing to cheap alcohol, which was not known in feudal times.

NEW NOVELS.

The Law of Divorce: a Tale. By a Graduate of Oxford. (Newby.)—*The Law of Divorce* is an attractive title, and the mode of the Oxford

Graduate's attack on recent legal reforms affecting connubial rites almost leads to the conclusion that an extravagantly bad novel is more amusing than a really good one. In the first chapter, Roland Elsmere, the husband of the drama, noble, richly endowed in mind and fortune, brave, generous, sensitive, but *somewhat infirm of purpose*, quits his ancestral seat of Flossdale for a residence of "several weeks at Vienna, on a mission connected with the English Embassy in that capital." During his absence from home, Harriet Elsmere, his lovely wife, who has already given him two babes, and with whom he has lived in high domestic felicity, "sauntering with her through the groves of Flossdale, and rambling with her amid the golden furze and over the thymy heather of the adjacent hills," elopes to Scotland with his old schoolfellow and college friend, Walter Dunraven. On receiving the intelligence of Harriet's flight, Roland vows to pursue her and her paramour, and slay him at her feet. But in another moment he dismisses this hasty resolve as the mad dream of a distempered brain, for he sees clearly that "such an act would be murder, or manslaughter at the least." Unable to slay his treacherous friend without slaughtering him, Roland adopts a wiser course, and, "suing for a divorce, gets his marriage with the false Harriet annulled." Two years after his liberation from the perfidious Harriet, he marries again, taking for his second wife "the rich, handsome and cold-hearted Catherine Dashton." This second alliance, however, has not been contracted a fortnight, when he receives "a harrowing epistle" from Harriet, who has parted company from Walter Dunraven, and is anxious to return to the arms of her dearest Roland. The divorce, she argues in the "harrowing epistle," is a mere fiction of human impiety, leaving her, in the sight of heaven, just as much his wife as ever she was. "True—too true, alas!—I have," she writes, "tarnished your name and dishonoured your house; but, oh! my well-beloved, the world is wide; let us sail to some far-off land, to some sunny climate such as you love—and there begin our married life anew." No wonder that Roland on reading this harrowing epistle, "man as he was, wept, sobbed—sobbed loud and fast." He is at a loss what to do, and that he may arrive at no imprudent decision, writes from Paris to a friend in London for counsel and aid. But in the mean time, until he has discovered what course he ought to pursue, and what answer he ought to make to Harriet's epistle, he sends her, as consolation, copies of *Galignani's* newspaper, sealed with his seal, and addressed with his own hand, "Harriet, 9, Buccleuch Terrace, Baywater, London." Ere many days, Harriet, who is living in lodgings at Baywater with her dear sister Lizzy, learns that Roland has married a second wife. Her agony at the intelligence is indescribable, for as the marriage tie is indissoluble in the eyes of heaven, she, before God, is Roland's wedded wife still (notwithstanding her little affair with Walter Dunraven), and he, despite the forms of English law, is living in adultery with Catherine Dashton. What shall she do? Clearly it is her duty to proceed instantly to Paris, and rescue her husband from the arms of an adulteress. She and her sister concur on this point. "The sisters were perfectly agreed in their view of the case. They had often talked over the Law of Divorce, and even read some valuable pamphlets on the subject. They were equally convinced that Roland had done exceedingly wrong in availing himself of an impious law; that his second marriage was not only null, but that to abide under its obligations was really, though as yet he knew it not, to add sin to sin; and that the highest and clearest duty he had to perform towards Catherine was to separate from her without delay, seeing that her morality, as well as his own, depended on this step. Those who have sinned themselves, and then, like Harriet, have deeply repented, are always the most solicitous for the purity and virtue of others." Whilst Harriet, in London, is thus regarding the subject, Roland, in Paris, heartily sick of bride No. 2, has an interview with a Roman Catholic priest, whose expressed opinions on the indissolubility of the marriage tie cause the young man to exclaim, "Fool! fool that I was, not to inquire into this sub-

ject more deeply before I embarrassed myself with another wife, who, after all, perhaps is not my wife." Such is the state of his mind, when, as he is walking in sombre mood in the Garden of the Tuilleries, he is accosted by Harriet and Lizzy. "Like torrents from mountain sources, Harriet and Roland rushed into each other's embrace. They clung together with a cohesion the more persistent because Fate, Providence and circumstances seemed to be bent on keeping them apart. As they sat side by side, their foreheads, their cheeks, their lips were pressed fervently and closely, as if to reverse by resistance that cruel law which now made such endearments illicit. The passionate tenderness of their first love had returned upon them in all its fullness." It is soon manifest to Roland that it is his duty to part from his second wife and live again with Harriet. But Catherine is so selfish and cold-hearted as to object to this arrangement. On learning the purpose of her husband (as to the last she maliciously persists in regarding him) "she turned ghastly pale, and her countenance darkened with an expression of anger, indignation and menace such as we may conceive was that of Cicero when he launched the thunderbolt of his oration, beginning 'How long then, Catiline, wilt thou abuse our patience! To what length will thy unbridled audacity plunge!' " Catherine's "unbridled audacity plunges to the length" of obstinately refusing to give Roland up to Harriet and morality. The sordid creature, scorning the dictates of conscience and the precepts of religion, insists on her legal rights. For the next two hundred pages, Roland passes his time at Paris with his legal mistress, Catherine, or at the Château St. Amand with his illegal wife, Harriet, just as the influence of the one or the other is in the ascendant. At last Harriet extracts from him a promise to fly with her and her babes to the United States, where they may live happily for the rest of their lives. Bent on putting this project into execution, Roland and Harriet, attended by her ever-constant sister Lizzy, enter a first-class railway carriage at Rouen on their way to Havre. But no sooner have they taken their places than the artful Catherine, Mr. Scruples (Catherine's solicitor) and Mrs. Scruples (the wife of the afore-mentioned Mr. Scruples) enter the same carriage, and take possession of the three opposite seats. On the road to Havre that doomed carriage witnessed such "a shindy" as vehicle of mortal construction will never again experience. A cage full of Kilkenny cats would be tranquillity compared with it. "Whom do you call your husband?" "insolent and calumnious woman," "brazen-faced effrontery," "intense audacity," "infamous libeller," "you canting hypocrite," "traitor," "snake in the grass," "tigress," "audacious culprit," are amongst the exclamations screamed out by Harriet and Catherine at the top of their voices. Roland, overcome by his emotions, holds his tongue, but Mr. Scruples harangues the assembly on the Law of Divorce, and roars out lengthy quotations from articles published in the *Times*. On the arrival of the train at the Havre station, the ladies step out on the platform, and then, for the first time, discover that Roland, overcome by the excitement of the journey, has gone mad. "It would be impossible to describe the lunatic phases through which, in rapid succession, his spirit passed. Some order and distinctness is required in any subject, in order that it may be described; but the wanderings of an alienated mind, which are dim, incongruous and chaotic, baffle all powers of description, whether in prose or verse." True to her imperious and revengeful nature, Catherine determines to keep possession of her husband's body, though his mind has deserted it. "The proud, unbending Catherine had gained her point. She retained her husband, but his reason was gone. Harriet was left with her sister, pale, dizzy, sick and broken-hearted." Foiled in her noble purpose of liberating her husband from the bondage of a sinful alliance, Harriet dies, while her faithful sister becomes the wife of an Italian patriot, who scorns Mazzini the assassin, and, in due course, turns out to be himself the son and heir of a wealthy German Prince. Walter Dunraven appears again on the scene at the close of the book, to expire in horrible torments, as a villain ought to expire. The strangest part

of the winding up is that, after Harriet's demise, Roland becomes "a rational member of society, and reconciles himself to his union with Catherine much better than anyone would have expected." The curtain falls on the victims of "The Law of Divorce" "living together on very amicable terms." More of this novel we have not time to say. To give anything like a complete view of its absurdities we are unable. Every page contains something that compels the reader to indulge in a scream of laughter; and we have not for many a day spent a merrier two hours than when laughing over the unconscious folly of its author.

Court-Life at Naples in our own Times. By the Author of 'La Cava.' 2 vols. (Saunders, Otley & Co.)—Pleasant Protestant young English gentlemen, possessed of money and happy at home, are warned by one who knows the Two Sicilies well (obviously our author's case) not to marry Neapolitan Princesses, be the same ever so insidious and fascinating.—Such is the argument of this novel, which is executed spiritedly and with intimate knowledge of the scenes and manners described. What has made the Foreigner of late at a discount in fiction could not be told in a short compass. The blank credit awarded to him by certain enthusiastic novelists (especially ladies) in the beginning of the present century, is largely withdrawn, without, we trust, our writers or readers being in any danger of falling back into that dull prejudice which so long soaked among our middle classes with a mistrust perniciously defeating itself;—craving and curiosity being notoriously sharpened by injustice and exclusiveness. We have said that the author of this book knows the scenes and manners displayed in it;—but the narrow and servile ignorance, the cowardly duplicity, and the unmanly selfishness belonging to the Castalbiano family, and their coarse, comfortless ways of home-life, have doubtless many exceptions, even in a society so wretchedly corrupted and misgoverned as that of the Neapolitan nobility. The Italian characters, however, are clearly marked. The Princess-Mother differs from her son and her daughter—the coarse, slatternly Duchess de Villanova—though they are all of the same blood. The priests are not bad, allowing for the writer's general antipathy to their creed, which, indeed, was inevitable to the design. Some of the customs of noble houses in times of affliction, when under the iron rule of Papistical ceremony, seem so fearful and inhuman to those not subject to its weights as hardly to be described without a tinge of bitterness and aversion. There is not much of either, we repeat. One or two of the descriptions of scenery southward of Naples—that dreary, rich, earthquake-wasted district (so far, it may be feared, from being soon reclaimed)—are graphic. The entire novel, in brief, may be justly recommended as adding to the Englishman's knowledge of South Italy, if even he have no fair daughters to watch and ward. It has one fault, however, carried to excess—the extravagant use of foreign language in the dialogue. No doubt, this attests the writer's familiarity with the persons of his tale; but there is not one speech in a hundred here given in Italian for which a perfect equivalent in English could not be found. To read this story aloud would be next to impossible.

OUR LIBRARY TABLE.

Ten Years' Wanderings among the Ethiopians; with Sketches of the Uncivilized Tribes from Senegal to Gambou. By J. J. Hutchinson. (Hurst & Blackett.)—Two previous works had given Mr. Hutchinson a title to reckon himself an African authority. He had chronicled the Niger, Tshadda and Binue explorations; and he had journeyed largely to and fro on the western coast. In this volume he is rather hard upon the African nation, though not inclined to flatter missionary and philanthropic prejudices concerning the enormities of the interior slave trade. Writing, it is to be feared, with a theory at his elbow, he studiously disparages not so much the character of the African as his intellect. He has a bad opinion of Liberia, notwithstanding the raptures of Mrs. Stowe and the rhetoric of Mr. Blyden. He adduces many evidences of barbarism and total ignorance in

regions which the fond fancy of Europe imagines to have been reclaimed. He gives personal testimony to the practice of cannibalism within recent years, and, more flagrantly, of human sacrifices. No doubt the advances made by civilization among the Ethiopians is often exaggerated to the stupefaction of Exeter Hall; but is it altogether right to mass the barbarities and present the result as a picture of Africa from Senegal to Gambou? We concede to Mr. Hutchinson the merit of being well informed, and of writing in perfect good faith, while we may be justified, nevertheless, in thinking that his portraiture of the African character is rather less favourable, not only than that which he had accustomed us to expect, but than that which many competent witnesses concur in authenticating. The volume, however, is full of information, and of suggestions respecting the commerce and future development of Africa, throughout a vast region of which Mr. Hutchinson was quite at home, and where he saw and gathered much that will interest the reader.

An Unpopular View of Our Times; being the Result of a Free Inquiry into the Existing Sources of Demoralisation, and the Causes that have rendered Inefficacious the Schemes of Social Reformers, Lay and Clerical. By Patrick Allan Fraser. (Edinburgh, Macphail; London, Simpkin, Marshall & Co.)—The benevolence and fire-side shrewdness manifested in certain passages of this treatise make us reluctant to tell the truth and the whole truth about it, and to say that Mr. Fraser has made the mistake of a man who, with amiable intentions and some intelligence, volunteers to lead his fellow-men, when nature has designed him to be one of the led. Comparing modern thought with the mental condition of our ancestors and their rival schools of logic, Mr. Fraser is forced to the conclusion that "wrangling about words is becoming more and more the intellectual exercise of scholars;" and, searching for the distinguishing moral features of the educated classes of our times, he argues that "the entire absence of any consideration for the growth of mutual affection between parents and their offspring, the practical indifference regarding the development of the moral faculties, are features in our educational system strongly characteristic of the spirit of our progress." That these opinions will find assent amongst the well-informed and reflecting, we do not anticipate; but if by putting them forward as "unpopular," Mr. Fraser intimates a belief that they will be universally disapproved, he misjudges the world. In discussing questions of social science, the paradoxes of our author are even more startling than when he contrasts the intellectual and moral characteristics of times past and present. Two are two, and two are three; ergo, two and two make five. Such is Mr. Fraser's most favourite term of reasoning, and when he announces the conclusions to which it brings him, he shrugs his shoulders, and waving down anticipated opposition, smiles complacently on the unenlightened crowd who have not his wide range of vision. Crime, he argues, is on the increase, misery is on the increase, and the tendency to substitute machinery for manual labour is also on the increase. It follows therefore, that crime and misery are in a great measure consequences of an unwise application of mechanical invention, and that a limit cannot be put to the former without restricting the action of the latter. In like manner, combination of labour is shown to be a fruitful source of human misery. Wherever cities and factories make rapid growth, sin and suffering develop with equal speed. The remedy proposed for the evil, therefore, is to diminish the size of our cities and workshops, and to discontinue "making discoveries and inventions subservient to the gratification of our avarice, regardless of the demoralizing effects on the minds and bodies of those we have employed in connexion therewith." Such is Mr. Fraser's solution of some of the most perplexing problems affecting modern civilization. He does not advocate a total return to barbarism, or, as the visionary writers of the last century termed it, a return to a state of nature, but he would have us make one-half of the backward journey. To reply to such a suggestion with a reference to the doctrines of political economy,

would benefit neither the public nor Mr. Fraser. They are in no danger of regulating their course by the "unpopular views."

Hebrew Men and Times, from the Patriarchs to the Messiah. By Joseph Henry Allen. (Manchester.)—Dedicated to Mr. James Martineau by an author who acknowledges a debt of gratitude to "the affluent learning and the constant and most generous kindness of the late Theodore Parker," these sketches have a vigour and earnestness of thought and style that will recommend them to the admirers of 'Essays on Matters Pertaining to Religion.' Some of the more striking specimens of Hebrew national poetry Mr. Allen has put into verse, and in doing so has managed to combine, in an unusual degree, verbal fidelity with rhythmical force.

From Death to Life: Bible Records of Remarkable Conversions. By the Rev. Adolph Sadlier. (Edinburgh, Strahan & Co.; London, Hamilton & Co.)—These sermons, when preached, aided by earnestness of manner and the living influence of voice and looks, may have had an impressiveness which is quite lost in the printed pages. Whatever special grace or goodness they had when they were preached, printed they are of the ordinary type of sermons. They have all the special-pleading influences—constructions which most preachers feel not only allowed but called upon to make when handling Bible narratives, till every trait of the original grace and simplicity is overlaid and lost in the "improvements." This obligation to find a sermon in every verse prevents Bible stories having their natural influence upon general readers, and lies at the root of the disinclination to read the Bible, except as a task, which religious people complain they find in young people. These sermons in the present volume are insidiously called "Stories"; but they are the old interesting Bible narratives deprived of their human interest, expanded into the most wearisome, dry, disagreeable sermons it has fallen to our lot to hear or to read for a long time past. The doctrine may be very "sound," and satisfy all of the same persuasion; but the sermons, as sermons, are harsh, dogmatic, and ingeniously disagreeable. We feel the less scruple in thus recording our impression, as the author will assuredly set down our distaste to the hardness of our own hearts, and not to the unattractiveness of his sermons.

Fun, Feeling and Fancy. By John George Watts. (Kent & Co.)—The Bard of Billingsgate goes on his way cheerily, singing his blithe song griggishly, as though life were a long holiday, and the world a merry-go-round. The fun may not be of the most brilliant kind, the feeling of the deepest, or the fancy of the rarest, but each in its way is hearty, honest and true. The author is content with his lot in life, and happy if he can just conserve from the demands of Toil sufficient time to sing his song by the way. He gives us a pleasant picture of a light-hearted, striving, intelligent working-man. With such a hopeful spirit of his own, and such a domestic fate as he sings of, he can afford to be satisfied, although his efforts in verse do not bring him world-wide fame. We give a brief sample of his new book. Mr. Gladstone will, no doubt, sympathize with its burthen:—

GOD SEND A GOODLY HARVEST.

The tall corn bends its weighty ear
Before the playful wind,
And tiny children thither run,
The poppy-flower to find:
The Mower far afield looks up
And wipes his swarthy brow,
And murmurs to his comrade by,
"The wheat is ripening now,
God send a goodly harvest!"

We catch his words with heart and soul,
We echo them again;
God send our every garner soon
Be filled with golden grain!
That city-reared and village-born,
When wintry winds may blow,
From toddling babe to tottering age,
No want of bread may know—
God send a goodly harvest!

Now blessings on the hands that work
To till the fruitful soil,
And blessings on the hands that aid
To gather up the spoil!
But woe upon forestalling knaves
Who selfishly have thriven,

By plundering the poor man's child
Of food its God hath given—
There'll be a final harvest!

—It must be admitted that some of the humour is of a transpontine kind. We like best the Irish story of 'Daniel O'Rourke,' who won Miss Nelly O'Grady after a manner entirely his own. The lady—

Whose eyes were a gray-bluish-yellowish tint,
And improved, Dan said, by their thrilling squint;
While the crows on her hid,
Tho' a terrible rid,

Most gracefully twisted and twirled as it wint,—
has two admirers, who, at Dan's suggestion, agree to fight for her, on the understanding that she will marry the best man within a month of the battle. Dan, as a friend, takes care that they fight past marrying or giving in marriage. At the time appointed for the wedding neither of the favourites appears. Dan was punctual:—

"The dirty spalpains," Nelly cries,
"And I've split all my money
In buyin' these fine widdin' clothes!"
"Och! niver mind, my honey—
Their likes shant make a fool of ye,
And your poor heart be blitin'!"
Come, let the prast your darlint hand
With this un be unittin'
I've had the blessed bands announced,
So make me blist for ever;
Say no! I'll go and hang myself,
And jump into the river."
"Och, sure, you've got a graisy tongue,
You're always mighty civil!
And as I wont be made a fool,
There, Dan, I'm yours, ye divil."

The Story of My Mission in South-Eastern Africa; comprising some Account of the European Colonists, with Extended Notices of the Kaffir and other Native Tribes. By William Shaw. (Hamilton & Adams.)—As Wesleyan General Superintendent in South-Eastern Africa, Mr. Shaw occupied an excellent position for "looking out." He has brought home, however, a missionary narrative of a very average order, with occasional flashes of interest upon a generally dim surface. The volume, upon the whole, is rather in the nature of a report addressed to a special body, than of a traveller's record for public circulation.

Port-Royal: a Contribution to the History of Religion and Literature in France. By Charles Beard, B.A. 2 vols. (Longman & Co.)—Within a few years, contributions to the history of the Port-Royalists have been published, chiefly in the French language. Mr. Beard's work is the most elaborate that has appeared from an English pen. It assumes to be "a chapter of the history of Christianity heretofore unwritten." It includes, as the author intimates, a view of the Jansenist controversy of the seventeenth and eighteenth centuries, though no effort is made to dwell at length upon the earlier developments of those important, yet dull, discussions, entangled in the religious chronicles of the Low Countries and France. Port-Royal became a centre for all the leading French Jansenists; it brought the entire intellect of the schism, as it was called, into a focus at the great Cistercian monastery; it illuminated many a page of ecclesiastical chronicles; therefore, as Mr. Beard urges, the narrative is one of lasting interest to every class in Christendom. He duly acknowledges his obligations to Mrs. Schimmelpenninck, and, later, to M. Ste.-Beuve, and it is one distinguishing merit of his work that, besides being written in a scholarly and vigorous style, it deals with an extraordinary phase of Catholic religious life in a spirit by which Catholicism itself could scarcely be offended.

Forays among Salmon and Deer. By James Conway. (Chapman & Hall.)—A portion of the contents of this volume appeared a short time since in the columns of a sporting newspaper, but the greater part is new material, and as such claims that especial introduction to the public which it is against our custom to award to ordinary reprints. Mr. Conway is an agreeable companion, with the fresh spirits and vigour of youth. The free air of the mountains is found in many of his pages, but he is far too wordy. He would have produced a more agreeable effect if he had struck out from his proof-sheets at least one-third of their sentences, and out of the remaining sentences had struck out at least one-third of their words. Still his book is

far from a bad one, and men who in the heat of the London season are looking forward to a long vacation in the Highlands will read it with pleasure and profit.

Mr. Charles Knight has published the seventh volume of his *Popular History of England* (Bradbury & Evans),—a work, pleasantly compiled and written, to which we shall devote attention on its completion.

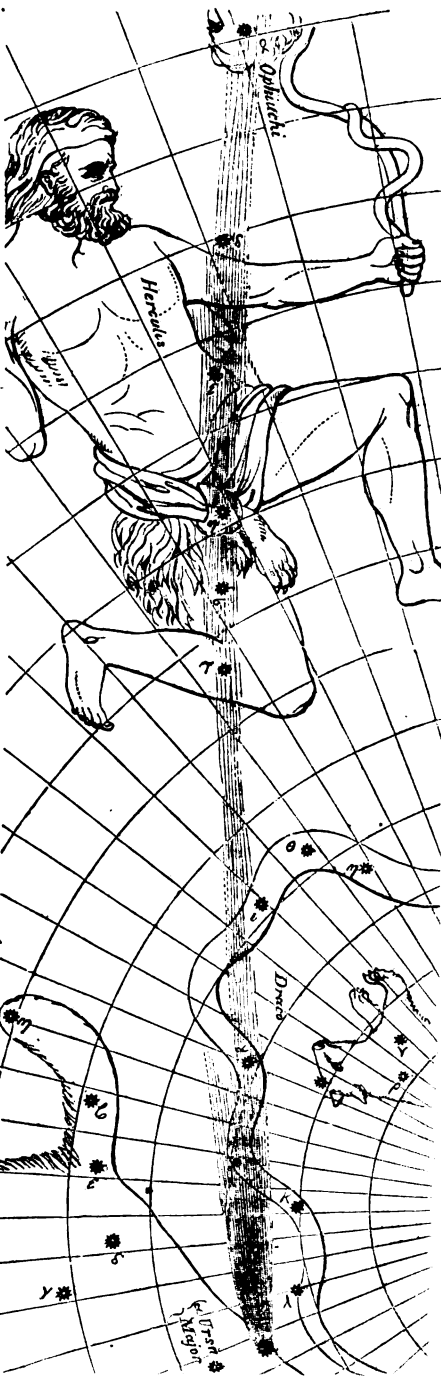

Among our new editions, we notice the following appearances:—Messrs. Hurst & Blackett have included in their "Standard Library" *Nothing New*, by the Author of "John Halifax."—Volume II. of *Milton's Poetical Works* has been added to Mr. Bohn's "Illustrated Library."—We have new editions of *Historic Certainties respecting the Early History of America*, by the Rev. A. Newlight (Parker, Son & Bourn),—and *Agnes Home* (Simpkin).—Among our reprints are, Volume IV. of the re-issue of *Punch* (Bradbury & Evans),—*The Legendary and Romantic Ballads of Scotland*, edited by Charles Mackay (Griffin, Bohn & Co.),—*Seaside Divinity*, by the Rev. R. W. Fraser (Hogg & Sons),—*Irish Police-Officer*, by Mr. Curtis (Ward & Lock),—Volume IV. of *The Posthumous Works of the Rev. Dr. Wardlaw*, edited by his Son, the Rev. J. S. Wardlaw (Fullarton),—*Help of Women in English Parishes* (Murray),—*The Wedding Guests; or, the Happiness of Life*, by Mary C. Hume (Pitman),—and *The Development of the Wealth of India*, by T. Hare (Macmillan).—The following works appear in second editions:—*A Book about Doctors*, by J. Cordy Jeaffreson (Hurst & Blackett),—*Practical Remarks on Belfries and Ringers*, by the Rev. H. T. Ellacombe (Bell & Daldy),—*Bishop of St. David's Letter to Mr. Bowstead concerning Education in South Wales* (Rivingtons),—and *Voices from Home and Nature*, by Mrs. W. H. Trinder (Bosworth & Harrison).—The following appear in third editions:—*What to Observe; or, the Traveller's Remembrancer*, by the late Col. Jackson, revised and edited by Dr. Norton Shaw (Houlston & Wright),—*Sacred Poems and Prose*, by the Rev. F. Whitfield (Broom),—and *"This Present Age,"* by the Rev. G. Cuthbert (Broom).—We have a fourth edition of *Management and Education of the Blind*, by J. G. Kine, translated by the Rev. W. Taylor (Simpkin).—Among miscellanies, we must announce Divisions II. and III. of *The Book of Field Sports*, by H. D. Mills (Lea),—*Switzerland: How to See it for Ten Guineas*, by Henry Gaze (Kent),—*The British Controversialist* (Houlston & Wright),—Vol. II., Part II., of *Memoirs of the Geological Survey of India* (Williams & Norgate),—and *Agnes Martin; or, the Fall of Cardinal Wolsey*, being No. XXVII. of "Historical Tales" (Parker).

LIST OF NEW BOOKS.

Aimard's Border Rifles, 8vo. 5s. 6d.
Anne Boleyn: a Tragedy, 8vo. 5s. 6d.
Arago on Comets, transl. by Smyth and Grant, 8vo. 5s. 6d.
Awas-I-Hind; or, a Voice from the Ganges, post 8vo. 5s. 1.
Beaufort's Egyptian Sepulchres and Syrian Shrines, 2 v. 8s. 25s. 6d.

Tracts for Priests and People, No. 6, by Ludlow & Maurice, 1s. 6d. cl.
Usher's Essays on the Dwellings of the Poor, 8vo. 5s. 6d. cl.
Wood's Defence of the Cycle of the Seasons, 8vo. 10s. 6d. cl.
Wright's Greek and English Lexicon, 12th edit. 18mo. 4s. 6d. cl.

THE COMET.

Sir John F. W. Herschel has sent to us the following drawing of the Comet. This drawing, which is probably the most exact and authentic representation made of the celestial visitant now causing, and likely to cause, so much discussion among astronomers, was made by Sir John himself, at Collingwood, on the evening of July 4, at half-past eleven P.M. The Comet was then at its greatest brilliancy, and appeared to the naked eye exactly as in the sketch.

The constellations are figured from Argelander's maps.

RESEARCHES IN LUBECK.

Lubeck, July, 1861.

PERHAPS some details of the past splendour of this curious old place may not prove uninteresting to your readers. It was the capital of the wide-spread Hanseatic League, and, with refer-

ence to its large trade in Asiatic commodities, brought by caravan to Novgorod and other out-shoots of the Hansa, used to be called the "Venice of the Baltic." Dantzic, Cologne and Bruges have been too long imbedded in separate States to have preserved their identity intact, while Hamburg has become so cosmopolitan that Lubeck, the ancient metropolis of the Hansa, stands out in bold relief as the archetype of the Saxon Hanseatic population. Her ancient churches, with lofty and picturesque spires and ample aisles, studded with monuments that range unbroken from Byzantine to Rococo; her venerable Council-house, with Archives all complete; her massive and truly picturesque street architecture, built as if the Freemason Guilds believed that the trade and metropolitan pre-eminence of the capital of the Hansa were to last during long revolving centuries, all make a striking impression upon the most cursory traveller, and, reminding him of Nuremberg, Antwerp and Bruges, excite curiosity relative to the history of this bygone Saxon burgher-grandeur.

The general history of the Hanseatic Confederation has been so often treated by able writers as to have no longer the attraction of novelty. The League was, we may cursorily mention, the most distinct embodiment of the ancient municipal spirit of the Germanic Races during the period between the anarchy of the Middle Ages and the definitive shaping out of the Military States of Northern Europe in the sixteenth and seventeenth centuries; and that it was a powerful lever of civilization cannot be denied, for while the later spirit of feudalism (as contrasted with that of its institution) might be summed up in the words "Aggression" and "Lawless rapine," that of the Hansa was wealth gained by trade, and force used to defend lawful acquisitions, for it must be remembered that castellated noble and brigand were in those days almost convertible terms; and the historical memorials of Lubeck, and no doubt of many of the other towns, stigmatize "Adeligen-Strassenraub," as calling for prompt punishment, such as Lowland justice used to deal out to the collectors of black-mail. It was simply the towns and their trades-guilds grown strong enough, not only to put down the petty noble cataran, but even to beard the powerful prince, and make him sue for offensive and defensive alliances with this powerful confederation.

Berlin, Brunswick, Bremen, Cologne, Dantzic, Frankfurt-on-the-Oder, Göttingen, Halle, Halberstadt, Hamburg, Hanover, Königsberg, Magdeburg, Münster, Riga, Stettin, Stralsund, and many other cities and towns, amounting to between seventy and eighty, were in the League, and the factories of the Hansa were not only invested with great privileges in their two great western outlets, London and Bruges, but they had also franchises, practically amounting to monopolies, not only in the cognate Sweden and Norway, but far in Russia; and the Germanization of the towns in Esthonia, Livonia and Courland, dates from the colonizing and trading exertions of the Hansa.

If they put down robbery on land, it may well be believed that with so large a maritime population, and with such materials and pecuniary means for fitting out such fleets as were then in use, their operations at sea were no less effective. Not only was piracy put down in the Baltic, but Sweden and Norway were made to feel that this sea was ruled from its southern shores. Lubeck was not only the principal centre of these maritime operations, and the immediate capital of the circle of Hamburg, Rostock and Wismar, but the generally admitted metropolis of the whole League. Instead, therefore, of undertaking too much, we shall attempt a photograph of the interior of this municipality, with an occasional reference to the general streams of Germanic and Hanseatic history.

Lubeck was founded in 1143, and 200 years afterwards, that is to say, in the fourteenth century, we find it to be a populous and flourishing place of trade and regularly fortified with massive walls and towers, and beyond the Hamburg-gate the separate village of the *czules leprosi*, from which all approaching were warned by a bell and the sight of the lepers' grey mantles. A street of the interior of the town was inhabited by English,

which bears the name to this day, and besides it, the present Engelswische, or "meadow of the Angles," was called in the Urkundenbuch, "Pratum Anglicum." The buildings of the town were classified in the Register as follows:—Curia was a house with a court-yard, such as those inhabited by the spiritual and temporal dignitaries; Domus, a simple house with a gable; Mansio, a lodging, several being under one roof; Horreum, a store for merchandise; and, lastly, Buda, a booth, or shop, not having a gable. The Slavic bath, of Romano-Oriental construction (Stupa), was frequent in the town, and before 1240 there was a law that no new baths were to be established without permission of the authorities (even to this day the Russian bath, of which there are several in Lubeck, is used to a considerable extent). The houses were built partly of brick with wooden framework, as may still be seen all over the south of Germany, but of which very few now remain in the modern brick-built Lubeck. Only one, called exceptionally Domus Vitriaria, had, in the middle of the fourteenth century, glass windows. Not only inns, but private houses had almost invariably a sign, such as the "St. Graal," the "Kingdom of Heaven" (Himmelrike), the "Thrush Bush," &c. A well was usually common to two adjacent houses, but although cattle and swine were kept in the town, it was forbidden to give them water from the domestic wells.

Lubeck was a Saxon colony in a Slavic land, and the Saxons were essentially the dominant race, for both by law and custom they did not associate or intermarry with the subject Slavic population, so that if a Saxon fell in love with and married a Slavic girl the issue had not the rights of free men and women, or, to use the old German expression, followed the "worst hand," and could not inherit from the free father; and so late as 1290 the tribunals of Lubeck denied inheritance to a child because the mother was Wendish. Some exceptions were gradually made in the case of young Wends, who were acceptable to the Saxon maids, "if they were worthy of being invested with municipal rights" (en went des werldich were dat er borger worden were), but such had still the affix "Slavus." The subjection of the Slavic population was manifest in other matters besides marriage; they could not dwell in the same quarter with the Saxons; both they and the Jews were subject to poll-tax, and paid higher customs-duties than the Saxons.

The population of Lubeck, in the beginning of the fourteenth century, amounted to 53,000 souls, dwelling in much smaller houses and apartments than at present, divided into full bürgerers, or freeholders, half bürgerers, or copyholders, strangers (hospites), who were allowed to trade but not to hold real property, or even mortgage on it, to bear valid witness against a citizen, or to be guardians of the young; prohibitions that seem to prove that strangers were accustomed to many years of residence in the town. The other divisions of the population were the clerical body and their numerous dependents; the military mercenaries in the pay of the State; and, lastly, the whole of the labouring Slavic population. The nobles of the German empire settled in Lubeck had an exceptional position,—they were at once citizens and knights, being bound to fit out horses for the defence of the empire in proportion to their tenures. They formed a separate incorporation in the town, with faculty to trade, but not to engage in any handicraft.

From what we have said of the Hanse towns generally, the reader may imagine that the growth of the borough in wealth and population (every citizen being a militiaman) very soon swept away all attempts at feudal aggression. The representative of the Emperor was the Reichs Vogt, or Advocatus, who did not meddle with the details of local administration; he was sometimes called Rector, and the incumbent of this dignity was usually the Duke of Saxony, and occasionally the Dukes of Brunswick or Holstein. They not only fulfilled this honorary office for the Emperor, but during the rapid elevation of the Hanse towns they found it their interest to render good service to their wealthy clients, and many valuable privileges

were procured both from German princes and foreign States through the Dukes of Saxony.

Under the Vogt were in the earlier times the wisest of the town (Die Wittigsten, or Viri prudentes), each of whom was bound to be possessed of certain qualifications, such as that of freeholder; issue of legitimate marriage; no subject of a feudal lord; unconvicted of perjury; a man of a godly manner of life; and neither son nor brother of any living member of the Council. At the head of internal administration were the two burgomasters who had fulfilled the functions of chief municipal magistrates in the usual manner; and so on with the other civic functionaries, whom we need not particularize. Somewhat of local colour is to be found in the Wine-master (Weinmeister), who assured the due receipt of the Town's Rhine wine regalia, managed the wine-cellar of the Council, and collected fines in wine paid by the Citizens for petty misdemeanours. Hence the existence of the celebrated Rathskeller of Lubeck, a vast series of catacombs under the Council-house, then a state institution, but now handed over to private speculation, in which is still shown the vault where the Bridal Cup was quaffed on coming out of church, with its old sculptured mantelpiece and ungallant inscription, that, "if the happy pair knew the future, they would rather weep than laugh." Much wine was consumed in the festivals of the Council, both in the Town Hall and in their suburban pavilion, and due provision was made for the requisite hilarity by a stipendiary clown, a joker, whose salary figures in the civil-list as that of "Comes-Joculatorum."

Latin was the language of almost all affairs, public and private. The laws of property were founded on old Saxon customs, and it was not until the fifteenth century that the Roman law was brought up as a reserve, when the law of Use and Wont (Gewohnheits Recht) could not solve doubts in a satisfactory manner. But the Latin language was used not only in law and in the Church, but even in trade. Not only were the town account-books kept in Latin, but even those of the private merchants. It was not until the year 1455 that the town books were written in the vulgar tongue, and Latin was abandoned; on the eve of the period when the printing-press was about to render the masterpieces of ancient literature familiar to all the educated classes.

In the sixteenth century, we find that the Lubeckers were in trade narrow and exclusive. Imperfect political institutions have an inevitable tendency to drive mankind into narrow sects, guilds, and closely connected corporations, defensive at first, but, when they become stronger, aggressive against all who are not of themselves. Hence the whole train of guilds and corporations, freemasonry and secret tribunals, in the Europe of the middle ages; and in the East, those secret religious and political sects who, by mutual co-operation and occult organization, are powerful far beyond their apparent numbers. The close guilds and extreme mercantile jealousy of the Flemings, Hanseatics and Dutch had this origin, and, in its spirit, betrayed itself alike on the shores of the Baltic, and on the Spice Islands of the Indian seas. That Great Britain has been the foremost, the most fearless, and the most persevering in seeking her own interest on opposite principles, cannot, we should imagine, be denied, as forming one of the most remarkable landmarks in the history of the Christian civilization of the habitable globe; proving, as it has been, a contagious example with already tangible results, and every probability of future increase in a geometric ratio.

At this time, the Russian Czar, Iwan Basilowitz, used efforts to procure workmen from Germany for the civilization of Russia, but the Lubeckers of that day opposed the project by all the means in their power, as being likely to make Russia independent of their trade and manufactures. This narrow spirit produced reprisals; the Hansa itself rested on privileges, and, in 1560, these were withdrawn throughout all Norway, so that, after this period, the decline of the Confederation became visible; many German towns fell off, or contributed no longer to the common expense. Moreover, the gradual growth of the modern art of war among

the princes who had considerable states, made them more able to fix their domination on the minor towns. Hence, the Hansa gradually grew to be a shadow of its former self. But although the political power declined in Germany, there was still a considerable trade carried on with Flanders and the establishment of the Hanseatic Counters at Antwerp, whither they were transferred after the decline of Bruges, was a handsome compensation. Bruges had been for two centuries the great depôt of the association in the west. Thus the Hanseatic trade was a chief element in the prosperity of these old Flemish cities.

It was through the Hanseatics that the caravan loads of Asia, purchased at the Muscovite fairs, as well as the raw products of Muscovy, Poland and Sweden, were supplied to the manufacturers of Flanders, and it was through them that the products of Flemish industry and the sea-imported spices of the Indian Islands were, after the decline of the Veneto-Egyptian trade, in the earlier part of the sixteenth century, re-distributed to the Baltic countries of raw material which we have mentioned. The entrance of the New World into the business of the supply of raw materials, the colonial acquisitions of Spain, Portugal, Holland, France, and England, the spread of cotton, and the discovery of machinery, have enormously expanded the trade and population of the European races, and also the seats of wealth springing from trade and manufactures; but as we wander among the gables of Lubeck and Antwerp, we are reminded that those who reared those picturesque coignes and set up those curious weathercocks, just did within a narrow circle and with more limited means what England is now carrying on on the grandest scale with all the seats of export of raw products on the habitable globe. It was, in 1560, in consequence of a treaty with the magistrates of Antwerp, confirmed by Philip, that the enormous fabric of the Hanseatic House in Antwerp* was begun. This was the property of the Hansa, free from all taxes, and the merchants who dealt in it were under Hanseatic, not Flemish, law, except in case of murder having been committed. In short, the privileges granted them resembled those secured to the European States by the Turkish capitulations, and it is not improbable that our own Elizabethan capitulations of this period with Turkey, were founded as much on the Hanseatic model as on those of the Venetians in the Levant.

In 1630, in the midst of the Thirty Years' War, the great Hansa came to an abrupt termination, "falling suddenly," says the quaint and queer Becker, "like a tiler from a roof, unconscious of the number of steps down which he has tumbled." This will not surprise the reader after what we have already said of the spread of the commercial spirit to countries with which the Hansa traded; to which we may add the abolition of the Hanseatic privileges in England, Sweden, and Norway, (those in Russia having been the last to fall), and the decline of the manufacturing and trading supremacy of Flanders, with which the Hanseatics had the chief connexion. If the Portuguese, followed by the Dutch, inflicted the greatest blow on Old Venice, it was particularly the enterprise of the Hollanders, and their rapidly increasing shipping and capital, that superseded Lubeck, the Venice of the Baltic, at a time when the Thirty Years' War covered all central and northern Germany with desolation. Many political efforts were made by Lubeck to secure the integrity of the Confederation, but in vain. Diplomacy, which is always called in to ratify or legalize revolutions of trade and politics, can rarely avert them. Stralsund, Magdebourg, and numerous other places, were no longer able to pay their share of the common expenses, and, in 1630, the old Hansa was, by common consent, dissolved, and the new Hanseatic League confined to Lubeck, Hamburg, and Bremen. The old Hansa was an offensive and defensive confederation the new one purely defensive; and according to the treaty of 1630, these three towns bound themselves to put their fortifi-

* Now, or lately, under sale, and the announcements of which have appeared in the leading journals of Europe. The Steel-yard of London was sold by the Hanse towns some years ago.

cations "in a defensive military condition, but to observe a peaceful demeanour, and give no one a pretext for hostilities; but, should any one do injustice to one of the towns, either by levying forced contributions, or acts against right or reason, or should one of the towns be besieged, then the confederate towns are to assist the other with men, money, and the materials of war." This treaty was, in the first instance, valid only for a period of ten years, but, having been renewed, it seems scarcely less than surprising that after so many annexations, foreign and domestic, this republic, of only three towns, should still preserve an independent municipal existence. To no other spirit than that of a strong sense of legality can we attribute the prolongation of the existence of so many petty states in the midst of powerful military monarchies.

A great change had taken place in the external aspect of the town since the period of our description of the old Lubeck of the thirteenth century. To this early Gothic period belong the extensive cathedral and graceful Marien Kirche, the spires of which, shooting up to a height of four hundred and twenty feet, add greatly to the picturesque appearance of the town, as visible from all points of the compass. To this period also belongs the Rath House or Council Hall, an edifice of so picturesque and original a character that the photograph or the colours of a Roberts could alone convey a proper idea of it to the spectator. With the end of the sixteenth century, and during all the first half of the seventeenth, the *renaissance* was in full vogue. Masses of the wooden-framed old Tudesque buildings, or of a later Gothic brick, were pulled down, and in their place the massive caryatide, or columnar gateway, with luxuriant festoon, or Romanesque medallion, and the whole train of Christian seraphs and Heathen fauns with florid Italianized arabesques, adorned external façade and internal roofs and walls. Even after the Thirty Years' War the later, but plainer and more solid, offspring of the early florid *renaissance* reminds the traveller of the Holland of the seventeenth century. Snugger and plainer grew the external architecture of houses as time rolled on, but, during the last century, internal decoration was in the French taste of the petty German capitals, and the faded boudoir à la Louis Quinze may still be seen in houses built a century or two earlier.

In painting, Lubeck has produced no distinct school, but three individuals of a high rank in their respective spheres of conversation piece, portrait, and Christian art.—Ostade, Kneller, and the still living Overbeck,—but no complete artist of the rare class uniting technical excellence with a high ideal. Ostade was a humorous naturalist; Kneller a modish machinist, and Overbeck, successful as he is in religious sentiment, and occasionally in spiritual beauty, despises colour as meretricious, for probably the valid reason that nature has refused him this glorious vehicle and complement of drawing, composition and expression. There was no dull, disagreeable, brick-dust atmosphere in the works of Perugino and the other greatest religious painters. This defect is the most surprising in a man who has lived so many years among the magic landscapes of the Romagna, in which a Claude and a Dughet received their noblest inspirations. The three Lubeck painters all sought success far from home. Ostade went so young to Holland, that his biography belongs exclusively to that country; the golden period of Kneller was passed in England, and Overbeck, although his family is old and senatorial, belongs to the Germano-Romans, having adopted even the faith of the Vatican, no doubt from strong conviction; and it may be not uninteresting to the English reader to learn that his nephew is still the Secretary of the Council of this Lutheran Republic.

The English career of Kneller renders any addition to his biography from authentic sources acceptable. The family name was Kniller, according to his recent biographer, Professor Ackermann, who has hunted up all the memorials of him still extant in Lubeck. His father, Zacharias, was born on the 16th of November, 1611, in Eis-

leben, and was inspector of mines to Count Mansfeld, who figured in the Thirty Years' War, but, being compelled to seek a retreat in Lubeck, during those troubled times, he turned his taste for drawing and mechanics to account, and in 1659 he became overseer of the works, and building curator of St. Catherine's Church and College, an ancient and extensive Gothic pile, used to this day as the gymnasium, library and picture-exhibition locality of Lubeck. According to the registers of this church, old Zacharias Kniller, who had, in October, 1639, married Lucia Beuten, had four sons, Zacharias, John, Godfrey and Andrew, born in 1642, 44, 46 and 49. Godfrey Kniller was therefore born on the 8th of August, 1646, and not in 1649, as is usually stated. He was destined for the military profession, and sent to Leyden to pursue his studies in mathematics and drawing, but the Muse had the upper hand in a generation when Holland swarmed with clever draftsmen, brilliant colourists of land and water, and humorous observers of real life. It was in the school of Ferdinand Bol at Amsterdam that he went through his apprenticeship to this charming art, and the large, noble style of this master, as well as Kniller's admiration of, and personal acquaintance with Rembrandt, led him away from the minuteness of the Dutch cabinet-school. On his return to Lubeck, he painted the well-known picture of 'Youth instructing Age,' in the golden tone of Rembrandt; a charming work, but certainly without the magic power of the great prototype. It still hangs on the walls of St. Catherine's Library at Lubeck. After a visit to Italy, where Guido, Albano and Sasso Ferrato had brought the silver tone into full vogue, he settled in England. Then began that long series of portraits of azure-clad Maids of Honour, whose blond ringlets floated amid trim Dutch gardens, and close-clipped yews, and those naval and military heroes of the wars of William and Anne with curling battle-smoke and foam-crested waves in the background, and in the middle distance disporting Neptunes and Naiads, the appropriate and habitual population of the Nore and the British Channel. With a flowing tide of court favour, fame and gold, Kniller, now Sir Godfrey Kneller, glided pleasantly down the Straits of Life, equally remote from the Scylla and Charybdis of British party, on which many a bigger craft had been irretrievably wrecked.

"La fortune pécuniaire fait un joli cousin pour une chute politique," says the observant Champfort, and such was the case with Lubeck: even long after the Hansa fell, the place was full of capital, accumulated by enterprise and preserved by generations of strict Dutch prudence and economy, so that the descendants of more than one Prince who had sought the political support of the Hansa during its power were, a century afterwards, seen wending their way to burgher capitalists in the financial difficulties brought on by building castles of folly, or by costly house and mistress keeping.

Although Lubeck was no longer the great emporium of the north, yet there was still a steady Baltic trade. The Swedes, after the gradual reduction of their power in Germany, applied the science of the eighteenth century to the development of their vast mineral resources; and if Lubeck was no longer the political book-keeper to the numerous Hanse towns, she was the convenient German agent of the expedition of the timber and iron of Sweden and the tar of Finland. In fact, Lubeck has been for centuries the entrepôt of the whole of the small towns of Finland and Sweden, to the top of the Gulf of Bothnia. In exchange for the timber, tar and iron of the northern coasts of the Baltic, the capital and judgment of the Lubeckers enabled them to supply French wines and other exotic luxuries prized in those northern regions at longer credits and with more convenience to the luxurious Swede and the simple Finlander than any other mercantile body; and, strange as it may seem, nearly the whole of the French wines drunk to this day in (the now Russian) Finland comes from the cellars of the wealthy old wine-merchants of Lubeck.

The 90,000 inhabitants of the period of the Hansa have now dwindled down to a third of that number; but a certain antique distinction exists as

well in society as in the edifices of the town. The wealth is limited, compared to the new American fortunes of Hamburg and Bremen. But in the older families there is a general good taste, a grave, easy tone of manners, a cultivation of the arts, and an absence of ostentation, which make Lubeck a sort of Faubourg St.-Germain of German Bürgerthum, compared with the sister cities, where smart young *pseudo*-cosmopolitanism is in full florescence. The cause of this is not only the "ancient riches," which Bacon considers the essential of aristocracy, but also the existence, up to the end of the German Empire, of a patrician class, such as Bremen never possessed, and such as Hamburg has not had since the abolition of its patrician order a century and a half ago. The patents were not of Lubeck origin, but from the Aulic Diplomatic Chancery of the German emperors, and the landed property of those persons was mostly in Holstein and Lauenburg. The Reformation was the great blow inflicted on the patrician supremacy; and although during all the eighteenth century one of the two Burgomasters was invariably of the patrician order, yet the influence of this class in the political sphere was nearly extinct. It remained, however, in society, and by eclectic forms moulded the higher Bürgerthum; as the patriciate was not sufficiently numerous to live entirely apart, as in the usual residence towns of Germany.

One of the last of this now all but extinct class was the well-known Carl Friederich von Rumohr, author of the now classic 'Italienische Forschungen,' who spent his youth and his age in Lubeck, and the interval amid the pictures and libraries of Italy, and among the artists and *littérati* of the northern capitals. The house of this distinguished scholar and *dilettante*, fitted up with great taste, and adorned by his library and Art collections, was, during several years, the centre of the choice spirits of Lubeck. He died at Dresden, whither he had gone to consult his friend, Dr. Carus, on the ills that had beset him in a climate somewhat too damp and cold after the sunny skies and balmy air of Italy.

Of the present generation of persons cultivating with success literature and the arts, we may mention Prof. Deecke, the learned librarian of the Catharineum, who published the first volume of a history of Old Lubeck, which certainly would have superseded Becker, for Deecke has taste, imagination and a large general culture, in addition to mere local erudition, but having been, unluckily for the Muses, elected Deputy for Lubeck, in the Frankfort Parliament of 1848, he got into the slough of German Democracy, and, after several years of interruption to his favourite studies, has been afraid to recommence, in advanced years, a work he fears he cannot finish. In this we think he is wrong; the true artist pursues the path he has worked out for himself while life and health allow him.

Geibel, the charming lyric poet, a native of Lubeck, resides in the vicinity of his royal patron at Munich, and Overbeck, the painter, will not probably re-cross the Alps. Of the resident *littérati*, we should rank, next to Deecke, William von Bippen, the author of the 'Eutiner Skizzen.' Eutin, which, we may remark, was the native place of Carl Maria von Weber, and may almost be called a suburb of Lubeck, is a little town situate on a lovely lake, embosomed in woods, in that part of the Duchy of Oldenburg which, strangely enough, forms an "enclave" in Western Holstein. Here resided Stolberg, Voss and Jacobi during the golden age of German literature, who actively corresponded with, and frequently visited, Weimar. Eutin was, in fact, the satellite of the Thuringian Athens. These relations have been agreeably cleared up by Von Bippen, from a large mass of letters and manuscripts not previously published. But this addition to our knowledge of the Goethe-Schiller period is mentioned by us solely in connexion with this estimable citizen of Lubeck; the subject itself is too large and interesting to be entered upon at the close of a letter. On some future occasion we may possibly touch on this new matter, which possesses an area of its own sufficiently wide.

A. A. P.

FOREIGN CORRESPONDENCE.

Munich, July 11, 1861.

Mr. Bauer's diving apparatus has now been sufficiently tested; but while the invention seems to have fully succeeded, the inventor has not been so fortunate. He was employed to raise the steamer *Ludwig*, which was sunk in the Lake of Constance; and he has now published in the German papers a full account of the disasters which paralysed his efforts, and, I understand, is bringing an action against the owners of the steamer for breach of their contract. One thing, at least, is evident, and that sufficiently certifies the practical nature of his invention—that he raised the steamer three times to the surface—but the company, who should have provided a steamer to tow it into port, preferred leaving it to sink. In the first place, the stinginess of the company, and their preference for inadequate materials, caused Mr. Bauer to employ casks instead of balloons for raising the steamer; and it is evident to the merest tyro that casks, which cannot expand or contract according to the pressure of the water, must be very inferior to the balloons, which are expressly contrived for that purpose. In the second place, the casks provided by the company were often leaky; and as they did not supply a barge, which was included in the contract, to hold them, they were left at anchor in the lake, to be knocked about and stove against each other. In spite of these obstacles, Mr. Bauer had the *Ludwig* ready for raising on the 27th of May; he then had to spend nearly two days begging for a steamer to tow her into port; and at last he was told to fire a gun and hoist a flag as a signal, when the *Ludwig* was raised, which should at once be answered. He returned to his post; at half-past ten in the morning the gun was fired and the flag hoisted; from half-past ten till two they waited, repeating the signal five times; no steamer came; and at about two a storm rose, which stove in all the casks, and sank the *Ludwig* to her former position. This was the first experiment, and all the preliminaries had again to be gone through. The second time a steamer was provided and two towing-hawsers; but these were both new, and the steamer had neglected to take the rights out of them, so that they could not be used. The steamer's own tow-rope was substituted, though by no means so efficient. The *Ludwig* rose, and was towed some 1,200 paces without accident; there the steamer got entangled with a buoy, the tow-rope broke, and the ship's carpenter, on sounding, stated that the *Ludwig* was resting on a sand-bank. She was left there for the night; and it was not till morning that they discovered the carpenter had dropped his lead on the bags of corn on the *Ludwig's* deck instead of on the bottom of the lake, and that, instead of being on a sand-bank, the *Ludwig* had again sunk to a depth of 73 feet. To let her repose more safely on the sand-bank, the air had been suffered to escape from the casks, and all had to be gone through again. The third time was as the first,—no steamer was provided. Here the matter rests for the present; but I trust some steps may be taken to insure Mr. Bauer against loss, and against any discredit which may come from failures caused by the foolish economy and negligence of others.

The failure of King Maximilian's prize play [*Athen*. No. 1745] has led to a renewal of the competition. The new plays are to be sent in by the 1st of October 1863; they are to be either tragedies or "show-plays"—to adopt the excellent German name of a class for which we have no exact English equivalent—and are to be taken from Bavarian history; the final decision lies, as before, in the result of the first performance on the stage of the Court and National Theatre. The prize amounts to between 90*l*. and 100*l*.

Since the last Director of the Police died, and the present one came into office, the system of publishing the births of each month, in their proportion of legitimate to illegitimate, has been resumed, after a long interval. In this interval the morals of the people do not seem to have improved, nor the police interference, which causes so much illegitimacy, to have diminished. In April last the illegitimate births exceeded the legitimate: the legitimate were 215, the illegitimate 221. But

in the matter of statistics, here are some still more curious:—Attention has lately been called to the salaries of the Court musicians, as being utterly inadequate to defray the cost of living, now that the prices in Munich have risen so greatly. The general salary of the Court musicians is 500 florins (about 43*l*.) a year; and the following calculation is made, as being the lowest possible figure at which a family of four, without servants, can live in Munich:—Breakfast, 3*d*.; 1 lb. of meat for dinner, 4½*d*.; vegetables, 1½*d*.; soup, 1*d*.; flour, lard, eggs, 2½*d*.; bread, for dinner, 1½*d*.; wood, to warm the room and cook the dinner, 3*d*.; light, 1*d*.; school-money, pens, paper, &c., 1*d*.; soap and kitchen requirements, 1½*d*.; washing, 1*d*. These sums alone come to 400 florins a year, and to this must be added at least 198 florins for shoes, poor-money, clothes, taxes, house-rent, pension fund, &c. This is without servants and a crowd of minor expenses. It may be interesting to compare these figures with some of those furnished to the *Times* in one of its usual autumnal controversies, when the question was debated if a married couple could live in London on 300*l*. a year; or those supplied by a Correspondent the other day stating the requirements of his chosen wife.

E. W.

OUR WEEKLY GOSSIP.

A movement has commenced in the Royal Society to offer the next Presidency to Lord Brougham. Some leading Fellows have already signed a requisition to his Lordship, and it is considered probable that Lord Brougham will accept an honour to which he has so many and such powerful claims. More than fifty years ago, he was a contributor to the *Philosophical Transactions*, and he has maintained during his long and busy life an intimate connexion with the higher class of scientific studies. The younger men whose claims to the Presidency of the Royal Society are put forward may well postpone them in presence of a candidate so distinguished and so venerable as Lord Brougham.

A promenade will be held to-day (Saturday) at the Italian Gardens of the Royal Horticultural Society. The Band of the Royal Engineers from Chatham and the Band of the First Life Guards will play.

The fifth annual meeting of the National Association for the Promotion of Social Science will be held in Dublin during the week, Wednesday, August 14th, to Wednesday, August 21st. Lord Brougham is expected to preside. The Presidents of Departments are—the Right Hon. Joseph Napier, Sir J. G. Shaw Lefevre, the Attorney General for Ireland, Lord Talbot de Malahide, Judge Longfield, and Mons. Michael Chevalier.

A fine and very spirited terra-cotta bust of Oliver Cromwell has recently been added to the National Collection of Portraits. The Trustees of that gallery have thus taken the first steps towards solving the question, "Shall Cromwell have a statue?" This portrait bust is by Edward Pierce, the statuary who executed the bust of Milton, and the statues of Gresham at the Royal Exchange and of William Walworth at Fishmongers' Hall. His bust of Sir Christopher Wren at Oxford is excellent and betokens the attainment of great mastery in his art. The clay model of Milton is at the Hyde, Mr. Disney's residence, in Essex. The terra-cotta of Cromwell seems to have been Pierce's original study from the life for the marble bust which bears his signature, and which now belongs to Lord Taunton.

We hear from Taunton that the Castle Green estate in that town is announced for sale by public auction. Taunton Castle is the chief historical glory of Somerset: and should be secured, if possible, for public use. It was built by Ina, the Saxon King. At the conquest it was rebuilt by the Bishop of Winchester. The oldest part of the present castle is probably of the eleventh century, though some antiquaries are of opinion that the west wing is part of Ina's edifice. The chief historical interest of the castle lies in the fact of its having been, though a ruin, Blake's headquarters during his prolonged and romantic defence of the town. More than once, Goring's crew fought their way through the ruined streets

to the very gates of the castle, but always to retire discomfited from that ancient heap of stones. A generation later, it emerged into fame in connexion with Monmouth's rebellion and Jeffrey's Bloody Assize. A portion of the pile has been repaired in modern times. The property is altogether one of high historical interest, and ought to have been secured for a county museum. If it must fall into private hands, we trust they will be safe and faithful ones. To destroy this monument of past ages for the sake of converting the land into streets of cottages, market-stalls and beer-shops, as some speculator may be tempted to do, would be an intolerable insult to the nation.

The Meeting of the Ray Society on Monday afternoon received the resignation of Dr. E. Lankester, the Secretary, and nominated Mr. Gassiot to the vacant office.

The first of the Duchesses' *fêtes* came off at Cremorne Gardens on Thursday evening, with great success. The weather, though cold, was fine,—the company among the best in England,—and the entertainment offered to them really amusing. Most remarkable, perhaps, of the attractions of Cremorne, is the very great beauty of the gardens. When lighted as they were on Thursday evening by many thousands of parti-coloured lamps, and by a very brilliant moon, the effects produced among the tall trees, the long alleys and exquisite ferneries, are almost magical. A very noticeable feature is the Stereorama—a set scene, painted by Messrs. Grieve and Telbin—representing the Alpine road from Lucerne to Lago Maggiore. This scene is a marvel of artistic design. A second *fête* is to be given on Wednesday next.

The Whittington Club on Monday evening was the scene of a singular exhibition. Cardinal Wiseman's 'Fabiola' was acted as a drama, by a party of amateurs, in the presence of the Cardinal himself, and the orchestra was conducted by a Catholic priest, to the apparent satisfaction of a very numerous audience. A prologue was delivered, in which we were reminded that the English drama commenced with mysteries and moralities, which were, and in Italy are still, performed in churches; and the practice was justified as being applicable to modern times. This recognition of the drama by a priesthood, so expressly made, may have a meaning with which we are unacquainted; but, beyond the circumstance of a large clerical as well as lay attendance, it was not very favourably inducted. The performers, for the most part, were inefficient; but Miss Lucas, in an interesting part, as a kind woman of the heroine, and who suffers martyrdom by decapitation, acted with remarkable intelligence and grace of manner. The drama, in other respects, was self-supported, and endured the ordeal better than might have been expected. Some of the scenes were really dramatic; and the earlier half of the play was conducted with some judgment. In the latter part, the unity of action was lost, and the incidents wanted that artistic connexion without which no satisfactory result can be obtained. Much scenery, machinery and stage effect were necessary in illustration of the story; and there were some angelic apotheoses and religious processions which required considerable pains and outlay, and which do Miss Lucas, who had the stage-management of the affair, great credit. The immediate object, we believe, was to raise funds for some Catholic schools; and the Lord Chamberlain's licence, we understand, was previously obtained for the performance.

A memorial statue of Dr. Isaac Watts has been placed in the public park of Southampton. Dr. Watts was a native of the town, and his enthusiastic admirers imagine they can trace in the calm surface and green shores of the Southampton Water the scenery of some of his most popular hymns and spiritual songs.

The omission of two or three words in a passage relative to the Vane family (in our article last week) doubles up two persons into one. The paragraph, after describing Gilbert Lord Barnard as father of Anne Vane, should have had the words "and uncle by marriage of the Lady Vane," before the concluding line, "on whose story Smollett founded his 'Memoirs of a Lady of Quality.'"

The London and Middlesex, and Surrey Archæo-

logical Societies brought the first session of their evening meetings to a close on Tuesday last, the 16th instant, at their rooms, St. Mildred's Court, Poultry. The Rev. Thomas Hugo presided; the Report of the Director, Mr. W. H. Hart, was submitted, and various papers were read. Among these was one by Mr. H. S. Richardson (of Greenwich), 'On the Art of Wood Engraving,' in which the lecturer gave an historical sketch of this beautiful art from its earliest rise to the present time, illustrating the various schools by numerous examples. Mr. J. J. Howard exhibited a rubbing from a slate monument in Quethiock Church, Cornwall, to the memory of Hugh Haslimond, who died in 1599, and the Director exhibited a rubbing of a brass from the same church, to the memory of Richard Chiverton, Esq., and Isabel his wife, who died in the years 1617 and 1631; this brass is very little known, and is a specimen worthy of attention, from the peculiarity of its design, as well as the epitaphs underneath. The splendid collection of miniatures of Henry the Eighth and his various wives, belonging to the Duke of Buccleuch, also attracted considerable attention. A tortoise-shell snuff-box, inlaid with gold, formerly the property of George Monk, the great Duke of Albemarle, and a spur, one of a pair worn by Fulke Greville, Lord Brooke, who wrote himself servant to Queen Elizabeth, councillor to King James and friend of Sir Philip Sydney, together with an illuminated service-book of the fifteenth century, were also exhibited by Mr. J. P. Pollard. Several autographs of John Wilkes (the friend of liberty), together with an impression from his coffin-plate, were exhibited by Mr. Howard, and by Mr. John Faulkner, jun. Mr. W. H. Overall exhibited some drawings of London localities; Mr. Charles Baily offered some remarks on a collection of personal ornaments lent by Mr. Warren, of Ixworth; and the business of the Meeting was brought to a close by the production of a numerous collection of brasses, which formerly belonged to the parish church of Camberwell, but which on the destruction of that edifice by fire some years back, passed into private possession, where they now remain.

When Dr. Franklin was asked, what possible use could be made of balloons? he is said to have answered,—"What use is a new-born baby? When aërostation becomes a scientific institution balloons will be put to many uses." The prophetic American philosopher little imagined, however, that balloons would be made subservient to telegraphic purposes. During the wars of Napoleon the First, balloons were used for reconnoitring the operations of armies; lately they have been employed not only to reconnoitre, but to telegraph the results of the observations by means of a wire connected with the earth. This novel employment of telegraphy has been introduced by Mr. Allan, of Rhode Island, who has been appointed aeronautical engineer to the United States Government. Prof. Lowe was the first person to send a telegraphic message from a balloon to the earth. The experiment was made at Washington, and we reproduce his message, which possesses considerable interest as being the first aerial despatch:—

"To the President of the United States.

"From the Balloon Enterprise, Washington.

"Sir,—This point of observation commands an area nearly fifty miles in diameter. The city with its girdle of encampments presents a superb scene. I take great pleasure in sending you this first despatch ever telegraphed from an aerial station, and in acknowledging my indebtedness to your encouragement for the opportunity of demonstrating the availability of the science of aeronautics in the military service of the country.

(Signed) "T. S. LOWE."

While gossiping on telegraphy, we may further mention that M. Bonelli, of Milan, has invented and patented a new mode of transmitting telegraphic messages, which is stated to be far superior to any at present in use, and which possesses the great advantage of being so inexpensive that messages can be sent and printed for sixpence. A company are laying down wires on M. Bonelli's system between Liverpool and Manchester.

The recent Paris Census shows that no fewer

than 23,000 persons are employed on photography and photographic processes in that city.

The French Archeological Society for the Preservation and Description of Monuments, has issued its programme for the twenty-eighth meeting, which will be held at Rheims from the 24th to the 28th of July, presided over by Cardinal Gousset. The programme contains forty-one questions, seventeen of which refer specially to the Gallo-Roman period of the city of Rheims and its neighbourhood; the other questions relate to the history of Rheims under Merovingian and Carlovingian rule; to the art of *orfèverie* in Rheims during the Middle Age; to certain works of this art; to the villages in the Champagne founded by Celto-Belgians, by Romans, by Salian Franks, by Austrasian Franks, by secular priests, by regular priests, and by the nobility. Other questions treat specially of the Church of St. Remigius and the history of the Cathedral; some questions, too, are devoted to the history of the cultivation of the vine in the province of Champagne. A couple of days during the meeting have been destined to a closer inspection of the Gallo-Roman remains at Rheims, of the Church St. Remy, the Cathedral, and several old houses of the town.

The new Museum at Cologne was inaugurated on the 1st of July; the programme for the solemnities on this occasion, which had been strictly followed, contained a musical mass by Cherubini, at the Minoriten Church at ten o'clock in the morning; a festival procession to the new museum; the handing over of the building to the town magistrate; the consecration of it by the Archbishop-Cardinal von Geissel; a festival song of the Männergesang-verein, and the opening of the new spacious rooms for the second General German Art Exhibition. The new edifice has been designed and erected by the Cologne architect, Herr Felten; it abuts at its southern side on the Church of the Minorites; its cloisters, which form the base of the new building, belonged to the convent of the Minorites. The other three sides round the building have been laid open and arranged for pleasure-grounds. The old city has reason to be proud of this new acquisition, not as an ornament alone, but as a memorial of patriotism and devotion of two of its citizens, both of whom have given their names to the edifice, which is called Museum Wallraf-Richartz. Ferdinand Franz Wallraf, born in 1748, laid the first foundation of the Museum by his collections, which he had amassed with the assiduity and passion of a true lover of objects of Art and curiosity. His means were slender, and he often suffered from hunger and cold in order to satisfy his passion of collecting objects of Art. The time of war, when French troops were quartered in Cologne, assisted him greatly in his pursuits. In the general confusion, when every one was intent to save what "portable property" he could lay hands on, very little importance was attached to old books, pictures, documents, and so on, and Wallraf was enabled to purchase these things to his heart's content, for trifling sums of money. Many a valuable piece of Art, too, he saved from the hands of the enemy by his indefatigable zeal. Only thus can it be explained how he managed to gather such a vast number of Art-treasures, with an income only adapted for the moderate wants of a quiet scholar. In 1818, when Wallraf was thought to be dying, he bequeathed his collections, consisting of coins, minerals, paintings, books, engravings, &c. to his native town, with the only condition, that it should preserve, protect and never part with them. He recovered once more; and the town, in gratitude and acknowledgment for his sacrifices and self-denials, fixed a yearly income of 4,000 francs on the devoted amateur. This sum, more considerable at that time than it might be now, should have served to secure his old age from want; but it did not prevent Wallraf from subjecting himself to new privations. His collections, at his death, in 1824, were heaped up and stowed away, pell-mell, in the Dompfstei, which had been his dwelling for many years. It was no small task to bring some order into this chaos, which was only accomplished after removing part of the collections into the Jesuits' College, and another part, comprising the library, the engrav-

ings, incunables and manuscripts, into the town-house, whence they soon after were removed to the Kölnischen Hof. In the mean time these valuable collections continued to increase and accumulate. The proverb says, that "one fool makes ten,"—in the same sense and proportion, let us hope, however, that one good and wise man stimulates at least a hundred by his good example. A love and understanding for Art, after it had been sleeping for many years, became more and more prevalent at Cologne. Dr. Sulpice Boisserée left to the town, at his death, in 1854, his valuable collections. More and more the want of a proper building for all these treasures of Art was felt, till at last Herr Richartz, by his large donations, enabled the town to have a proper building for them erected. Herr Richartz did not live to see his work finished; he died last spring, lamented by his fellow-citizens. He was a self-made man, and had raised himself from poverty to such wealth as enabled him to present a rich city with this fine temple of Art. He has stipulated, moreover, for a certain sum for the purchase of pictures, and another for the ornamentation of the hall with frescoes; the execution of which has been intrusted to Prof. Steinle, of Frankfort.

Will Close on Saturday, the 27th inst.

ROYAL ACADEMY of ARTS, Trafalgar Square.—The EXHIBITION of the ROYAL ACADEMY is NOW OPEN.—Admission (from Eight till Seven o'clock), One Shilling; Catalogues, One Shilling.

JOHN PRESCOTT KNIGHT, E.A., Secretary.

Will Close on Saturday, the 27th inst.

SOCIETY of PAINTERS in WATER COLOURS.—The FIFTY-SEVENTH ANNUAL EXHIBITION, at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.

JOSEPH J. JENKINS, Secretary.

The NEW SOCIETY of PAINTERS in WATER COLOURS WILL CLOSE ON SATURDAY NEXT, the 27th inst. Gallery, 53, Pall Mall, near St. James's Palace.—Admission, 1s.; Season Tickets, 5s.

JAMES FAHEY, Secretary.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN daily, from Ten to Six. Admission, 1s.; Catalogue, 6d.

GEORGE NICOL, Secretary.

WILL OPEN THIS DAY, EXHIBITION of the EIGHT HISTORICAL PICTURES, painted by WILLIAM BELL SCOTT for Sir W. Calverly Trevelyan, Bart., illustrating the History of the English Border, 'Building the Roman Wall,' 'St. Cuthbert the Hermit,' 'Venerable Bede,' 'The Descent of the Doves,' 'The Spur in the Dish,' 'Bernard Gilpin,' 'Grace Darling,' and 'Our own Day.'—French Gallery, 120, Pall Mall.—Admission, One Shilling.

SCIENCE

Tabular View of the Primary Divisions of the Animal Kingdom; intended to serve as an Outline of an Elementary Course of Recent Zoology (Cainozoology), or the Natural History of Existing Animals. By Robert E. Grant, M.D. (Walton & Maberly.)—The long title of this pamphlet sufficiently explains its object, and it will be very useful to all who may attend Dr. Grant's class. It is, indeed, simply "extracted from the manuscript notes of the more extended 'Course of Recent Zoology' given in University College, with the view of its proving a useful accompaniment to the student in the approaching elementary course,"—and, we may add, also with a view of introducing the name of Grant not unfrequently. Dr. Grant has certainly made useful researches among the Protozoa, and a summary of what is known is fitly given at the close of this 'Tabular View.' The whole would have been generally useful if it had not been so *Grantian*, and occasionally so strongly Darwinian. Dr. Grant has a perfect right to teach what he thinks truth; but in a mere elementary course he might hesitate before asserting decisively that "no type has yet been observed,—insect, mollusk or vertebrate,—which imperatively calls for any new laws or preternatural agencies for its mode of origin." We should not venture to offer this to students; neither should we venture to affirm with Dr. Grant that Mr. Darwin has "already surpassed all his predecessors from the time of Plato." For a piece of turgid eulogy, the prefatory dedication of this pamphlet to Mr. Darwin may indeed surpass all its predecessors from the time of Plato. Here is the conclusion of it:—"With one fell swoop of the wand of truth, you (Charles Darwin) have now scattered to the winds the pestilential vapours accumulated by 'species-

mongers' over every step of this ever-varying, ever-charming part of Nature's works; and your next movements will dispel the remaining clouds of 'mystical, supernatural, typical intrusions,' which still hang on the horizon of the sublime prospect, now opening to the view, of the natural animalization of the orbs of space, by the same simple laws which govern the physical and chemical phenomena with such wondrous harmony throughout the rest of the material universe." Is this a model of English composition for students? As to its assumptions (with others of a like kind), it is much to be feared that "one fell swoop of the wand of truth will scatter them to the winds," together with all "pestilential vapours." Why, in the name of common English, cannot Dr. Grant (who adds to his name thirteen lines detailing the various learned Societies of which he is a member) write simply and plainly? It is vexatious to find a man of his acquirements in Natural History obscuring his meaning, and choosing sometimes just the wrong term,—as, for example, when speaking of "the surviving fossiliferous strata of the globe." A surviving fossiliferous rock! As to Dr. Grant's disparagement of Plato, it is equally valuable with his extravagant encomium on Mr. Darwin. One would hardly wish a young student to be taught that Plato "abandoned the legitimate path of philosophical inquiry," and "overlooked all familiar manifestations of material forces in the ordinary phenomena of Nature." This is truly Grantian. When the Doctor treats of Sponges, we are thankful to listen to him; but when he bespatters Plato and bepraises Mr. Darwin, we think one of the sponges should be applied to wipe out the passages. Mr. Darwin may well second this use of the sponge.

Glossary of Scientific Terms for General Use. By Alexander Henry, M.D. (Walton & Maberly).—When we began to study there were absolutely no such Dictionaries and Glossaries as now lie on our table. We had to spell and puzzle out every word by itself, with the help of Hederic and Ainsworth. For example, when Miller of Bristol published his now uncommon work on the Crinoidea, or Lily-shaped Echinodermatous Animals, he coined so many and such extraordinary names that we were compelled to have recourse to himself to explain them. Then we were very young and eager to know the meaning of every term, but until we are very much older than we are we shall not forget the attempts of poor Miller, who had a slight impediment in his speech, to explain his terminology. Standing in the Bristol Museum with the fossils in his hand, he would kindly justify his nomenclature of, for instance, *Eugeniocrinites quinquantularis*, but with such contortions, hindrances and haltings in his utterance that his boyish auditor burst into irrepressible laughter upon a long struggling pause at "quin-quan-quan-quan-quan," and the irate name-maker broke off into minatory maledictions which happily remain to this day unfulfilled. We should at that time have been glad of such a help as this Glossary, and it may now be of some service to those who require only a concise explanation of scientific terms. We have had it in use some time, and can commend it, with certain exceptions—having noted about a dozen words which are insufficiently explained; while, as might be expected in so small a book, there are numerous omissions. It seems to be, for the most part, derived from Dr. Mayne's 'Expository Lexicon,' but as that work is too large for general use, so this work is too small for those who read various scientific works. A publication of about double its extent might include a sufficient number of terms for the reader's use. Should the author have the opportunity we should recommend him to enlarge the present work, and to exercise particular care in revising some of the explanations, which, indeed, are scarcely explanations at all. Nevertheless, with these exceptions, and for its size, this little book is a very convenient one for the library table and scholar's desk. The difficulty on the part of an author is to know what to include, and on the part of a reader what to expect, in publications of this kind. If the reader look out for a dozen or twenty words without finding them, he is apt to become disheartened with the book and probably to blame the author, whose

principle of selection and rejection he may not be able to discover. We would ask, for instance, why include, as in this book, "Per annum, by the year," which almost every child knows, and yet omit a number of terms which every man who reads in science at all will be sure to require explanations of?

Walks Abroad and Evenings at Home. With numerous Illustrations. (Houlston & Wright).—A book for young persons, written with good intentions, but with indifferent ability. Since the compilers of such volumes cannot go far wrong if they will only copy correctly and carefully read their proofs, it is strange that they offer to their young friends so little that is in any degree novel or even strikingly set forth. In the present instance the author seems to have got together a considerable amount of borrowings, but nearly always from the old stock sources of easy information. Why not take up some of the numerous and often highly interesting modern works of science and natural history, and extract from them? Why not impart an air of freshness to the book by a little additional research and patience in adaptation? Any lively and competent hand could produce twenty or thirty pages under almost any of the titles which head the pieces in this publication. "Alligators," for instance, might have made sport to some purpose—under different treatment; and so of almost any other creature hooked into these pages,—where they are all tame enough for any nursery, and old enough to be walked over without knowing it. Then the Avalanches herein are as motionless as the mountain they should descend. It is, however, useless to go beyond A for further remarks, excepting just to observe that exploded fables are pretty sure to be repeated as recognized truths by such compilers as the one who has put together this book. It would be superfluous to point out to such a person that his extract about the Norwegian Maelstrom is from too old a source. When that fabulous whirlpool is said, as here, to swallow up everything—trees, timber, shipping—that comes near it, one might wish that the compiler himself had approached it. Should he ever do so, however, we can assure him that it will not swallow him as he has swallowed it. Occasionally we have what is evidently an original connecting sentence between extracts (which are seldom marked as such) like the following:—"Lord Mulgrave, who has distinguished himself upon the floor of parliament, as well as upon the deck of his ship." Although we should be glad to say a good word or two for every book really imparting natural history in a pleasing form to children and youths, the author of this book must allow us to recommend him to be more observant in his "Walks Abroad," and more studious in his "Evenings at Home." We will add, that his book cannot do any harm, and perhaps a number of persons who know no better may be pleased with it.

FINE ARTS

Art Studies: the "Old Masters" of Italy; Painting. By James Jackson Jarves. 2 vols. (New York, Derby & Jackson; London, Low & Co.)

THESE two handsome American volumes are bound in close imitation of that well-known series issued from Albemarle Street which comprises the works of Kugler, Waagen and Mrs. Jameson. When lying on a drawing-room table they might easily be taken up by mistake. Persons, however, who do this would have no reason to complain of disappointment, since Mr. Jarves's pages contain a large store of original matter and of historical information which, given as it is from a novel point of view, cannot fail to awaken considerable interest. The pages of text, printed on a delicate cream-coloured paper, are interspersed with numerous copper-plate engravings, representing a great variety of pictures of different schools, but all taken, as it appears, from the author's

own collection. The fault of these engravings is that they are weak and too much alike. The crudities and strength of the Byzantine and early Florentine masters are represented with the same delicate and timid outline that we find employed upon Sano di Pietro, Perugino and Da Vinci. A Domenichino, placed on the same plate with a Francia, fully exemplifies these failings. The pictures collected by Mr. Jarves do not include any of a previous celebrity; but, with the exception of Paolo Uccello, Angelico da Fiesole, Mantegna, Squarcione, Verocchio and Michael Angelo, all the greatest names of early Italian painters will be found in his catalogue. Raphael and Leonardo da Vinci are there, of course. So valuable and interesting is his text that it is to be regretted that the author did not illustrate the work with better engravings from more generally known pictures. If, however, his collection be generally accessible in the country where the book has been published, the course he has adopted may prove judicious. Books on Art are of very little service unless the objects themselves can easily be referred to. The taste for studies of this nature is fast spreading among our Transatlantic brethren; but we must regard Mr. Jarves as very far in advance of his countrymen, both in method and pursuit, and we can only deplore the cloud now overshadowing his native land, and which, teeming as its does with civil strife, must retard, almost for ages, all thought or feeling for Art. Even recently, the following statement of Mr. Jarves shows that much would have remained to be done in America to establish a fitting condition for the study of Art:—

"'Old Masters' are almost a byword of doubt or contempt in America, owing to the influx of cheap copies and pseudo-originals, of no artistic value whatever. It is the more important, therefore, that they should be fairly represented by us, by such characteristic specimens as are still to be procured."

The following account of the changes of prices in pictures contains some useful information:

"In 1856, a small picture, by Niccolò d'Alunno, was sold in Florence by an artist to a dealer, for forty dollars; in a few weeks re-sold to an Englishman for five hundred dollars; exhibited at the Manchester Exhibition, whence it subsequently passed into the gallery of a distinguished personage for two thousand five hundred dollars. The 'Leda' of Leonardo, repainted, from motives of prudery, by the great-grandfather of Louis Philippe, was bought, at the sale of that ex-king's pictures, in Paris in 1849, for thirty dollars—restored to its primitive condition, and sold, as we are informed, for one hundred thousand francs. Ten years ago, 'an angel,' by the same artist, was found in the old-clothes market at Florence by an artist, bought for a few pence, cleaned, and sold to Prince Galitzin for twenty-two thousand francs. The 'Fortune' of Michael Angelo, or what was supposed to be, not long since was discovered in the same locality, in a disastrous condition, secured for three shillings, put in such order as was possible, and parted with to a gentleman of Paris for three hundred dollars, and a pension of one dollar per day during the lives of the seller and his son. Quite recently, one of Correggio's most beautiful works was discovered under the canvas of a worthless picture, acquired at public auction, at Rome, for a few dimes, at the sale by a princely family, of discarded pictures, and re-sold by the fortunate discoverer for fifteen thousand dollars, although the original proprietor instituted a suit against him for its recovery, which, however, was decided against him. In Florence, within three years past, a fine portrait by Titian, of the Doge Andrea Gritti, was picked out from a large lot of worthless canvases for six dollars. The 'Madonna del Gran Duca' at the Pitti was bought, by the father of the late Grand Duke, with two other pictures, of a widow, for a few dollars. Instances like these might be multiplied

to show that, in all times, 'prizes' do strangely and unexpectedly occur, and that pictures, in their fortunes, resemble their authors, often passing from extreme poverty into princely homes. The varied pecuniary estimation placed upon the same works in different epochs is also curious. Indeed, a history of the caprices of Art would be vastly entertaining. In 1740, at the sale, in Paris, of M. Crozat's Collection, a drawing by Raphael brought only ten francs. The same drawing, at the sale of the King of Holland's Gallery in 1850, fetched fourteen thousand francs. For the 'Ezekiel' Raphael, in 1510, received eight *scudi d'oro*, equivalent now to thirty dollars. At present, if sold, it would bring a fabulous sum. Within the memory of those now living, gold background pictures of the schools of Giotto and his successors, owing to the contempt the pseudo-classical French taste had excited for them, were brought out of suppressed churches and convents, and publicly burned to obtain the trifling value of gold which remained in the ashes. Amateurs are now more inclined to pay their weight in gold for the few that have escaped the ravages of time and Vandalism, and the same Government which permitted this destruction in 1859, sequestering all in public buildings as national property, passed stringent decrees to prohibit their leaving the country."

The author enters upon the history of Art with great zest, and maintains the thread of his discourse with great consistency. Anecdotes of Giotto and Buffalmacco are abundant. The character of Neri di Bicci is, however, too highly coloured. He may, like old Nollekens, have had "an eye to business," but neither his paintings, nor the *commentario* in Lemonnier's 'Vasari,' nor the *ricordi* still existing in Bicci's own handwriting, justify the strong conclusions at which Mr. Jarves arrives. He dwells with pleasure upon the religious, cleanly, mediæval city of Siena and her painters, whose works, by their calmness and repose, are especially grateful to him after the turbulence and straining for novelty which seemed to characterize the citizens of Florence. He utters a truth, which might be very closely applied, when, speaking of third-rate artists, he says:—

"Many altar-pieces and easel pictures that have come down to us ambitiously baptized are, doubtless, the productions of these imitative or mechanical minds, who, from intimate association as scholars or hirelings with distinguished artists, managed to acquire not only considerable skill, but subsequently have appropriated to themselves through the accidents of time not a little of their fame also."

On the career of Angelico da Fiesole and Masaccio he dilates in a very elaborate manner; and, indeed, his observations on the latter painter are full of original thought, keen perception, and well deserving to be treasured. In a subsequent page, however, we cannot assent to Mr. Jarves's assertion, that Leonardo da Vinci "owes nothing to classical Art." On the same principle, the writer might assert that Flaxman owed nothing to nature. Both these great men possessed a thorough appreciation and devotion for nature as she existed before them, and were fully conversant with and influenced by the various interpretations which previous artists had produced. Each will be found in a different proportion. To meet this assertion of Mr. Jarves, the figure of Leda, quite a classical female statue, which he refers to elsewhere, would alone be sufficient. The following parallel between two great Tuscan masters, who flourished at a wide interval of time, will be read with interest:—

"Giotto and Leonardo in many respects have much in common. Both were rare examples of the prodigality of nature's best gifts, personal beauty excepted in the former. They were complete, universal men, with a range of intellectual power capable of eminence in any direction. Leonardo's more varied acquirements were in unison

with the advanced knowledge of his age. Giotto's influence on Art was more profound, inasmuch as he concentrated his genius solely upon it. Each sought its development through similar processes of imagination, reflection and study of nature. Each was independent of the influence of other artists. Each largely inspired in thought and manner the greatest of the masters of their times: Gaddi, Orgagna, Giotto and Spinello incited by the one; Correggio, Giorgione and Raphael, representatives themselves of diverse and powerful schools, gaining strength and knowledge from the profound science of the other; and each attained to the loftiest excellence and widest fame. But here the parallel ceases. Giotto died in his sixty-first year, without a cloud to shadow his uniform prosperity, and Leonardo in his sixty-seventh, a saddened, frustrated man. Giotto was sustained and appreciated by the spirit of his age; earnest, religious, thorough; inciting to action, and gifted with elevated inspiration. It was the inauguration of a great intellectual movement, especially in Art, and his was the mind that gave it impetus and direction. Hence progress and prosperity were affiliated with him. Leonardo, on the contrary, arrived at his climax, when its great tide had begun to make backwater and to be agitated by contrary impulses, forcing it into a transition state. * * Leonardo, yielding to the drift of events, forsook democracy for aristocracy. Of the two extremes, demagogue or courtier, a choice being necessary, the latter he must be. * * Whenever his mind was left wholly at liberty its choice was towards the true and noble. But unfortunately for him and us its action in this direction became limited and exceptional. May not the respective friends of the two artists have some responsibility in this? Giotto was inspired by Dante and Petrarch; Leonardo was directed by Ludovico il Moro, Cæsar Borgia and Leo X.—a difference as of darkness from light."

On Raphael and Michael Angelo elaborate care and thought have also been bestowed; but enough has already been said and quoted to lead to that notice and perusal of the volumes themselves which, in no ordinary degree, they merit.

FINE-ART GOSSIP.—Amongst the many buildings which have risen lately to add to the decorative character of our London streets there are few so pleasing, modest, and simple as those designed by Mr. F. Warren, for a suite of offices, with shops beneath them, which stand near King Street, in Cheapside. These are five floors high. The architect has very sensibly reserved his chief decorations for where they can be seen, and therefore, few as these are, and also of the least costly description, they tell with their whole value to considerable effect. The shops are plain, and look airy and open, with wide sheets of glass. The upper floors are sustained by iron columns, placed within, and brick piers at the doorways. Above is a very simple and elegantly designed *facia* of stone, surmounted with a line of counter-sunk mouldings. The first-floors have windows of one, two, and three divisions, with the lights divided by bevelled mullions of stone; they are square-headed; over each of them is a discharging arch of brick, within which is a tympan of stone, the sole decoration of which is a sunk initial letter in the centre of each. The hood-moulding is a zig-zag of the plainest character; a stringcourse connects the whole. The third floor is of similar character. The windows of fourth and fifth are as plain as in the most common-place houses in Baker Street, but from their disposition, proportions, and accompaniments look quite elegant. Under every row of windows is a stringcourse; that under the fifth floor becomes what may be styled a minor cornice by its bolder projection, and the use of bricks set angularly so as to form an indented moulding. A still more decisive cornice surmounts the whole design, which, being bold without heaviness, and entirely of brick, must have been as inexpensive as it is effective. Here is an excellent example of good and simple Gothic design, executed at a very small cost, and yet is most strikingly effective as a whole. No one can say there is any want of light in the rooms

or window-space, or any lavishing of carver's work about this building.

Almost every visitor to the current Exhibition of the Royal Academy will share our regret to learn the death of Mrs. Wells, who was known as the most promising of our female artists. An artist she was, in the best sense of the term, gifted with a rare power of execution and knowledge of practical Art such as we feel safe in saying has not been possessed by any English lady. Beyond this her works evinced feelings for design which were superior to the average gifts of many painters of high note. Notwithstanding certain faults of drawing observable in the picture now in Trafalgar Square, entitled 'Bo-peep,' the breadth and vigour of its manipulation are enough to sustain a claim to a high artistic position, even if its remarkable qualities of expression were not considered. As a young and consequently incompletely practised artist, Mrs. Wells's works erred rather in excess of strength than the common fault of feminine tameness. Her 'La Veneziana,' also now at the Academy, is an example of this. Her 'Elgiva,' a head, is remembered by every artist who saw it, at the same gallery, six years ago. Her death followed, on the 15th inst., upon gastric fever superadded to childbirth. Her personal character was most amiable, and both as friend and artist she will be long remembered.

One of the most enterprising collectors of pictures and other works of Art died on the 12th inst., being Mr. T. E. Plint, of Leeds, who was known to all artists as an unusually accomplished judge of Art; he was also a stockbroker of the most extensive dealings, well known in London and the provinces. Mr. Plint was the purchaser of Mr. Millais's 'Black Brunswicker' and 'Proscribed Royalist,' and within a comparatively recent period had acquired Mr. Holman Hunt's 'Finding of Our Saviour in the Temple.' The latter work was to have enriched his collection when its exhibition and engraving are completed. It is understood that Mr. Plint intended to present it to the nation or to some great provincial gallery, probably at Leeds in the last case. The deceased was but thirty-seven years of age, and is universally spoken of as being liberal to munificence in disposition.

A great Art-festival is spoken of as to take place at Antwerp during the month of August next, under the auspices of the Cercle Artistique, Littéraire et Scientifique d'Anvers. On this occasion a sort of congress is to be held, wherein questions will be discussed the solutions of which concern the interests of artists of all countries. Amongst these is named a union for the protection of their material interests against piracy of designs. The circular before us says, "An unrelenting piracy, called *contrefaçon*, deprives them of the benefits of their labours; that *contrefaçon* has become a regular trade, which has its workplaces, its counting-houses and also its markets. The law, which punishes with severity the forging of a commercial signature, has not found any efficacious means of prohibiting the counterfeiting, we will not say of a work of Art, but of an artistic signature!" The congress held at Brussels in 1858 has not produced the desired effect, but served to call public attention to the subject. A project of law has been presented to the Chamber at Brussels which, it is hoped, will strike a mortal blow at *contrefaçon*,—but as it is not certain that this will give satisfaction to all interests, the above-mentioned congress is summoned. It appears that other and less material subjects will be considered, amongst which are named the questions, If the expression of Monumental Art is in accordance with modern ideas?—If the union of architecture, sculpture, and painting is not indispensable to monumental Art, and what reforms can be introduced into the instruction of the Fine Arts, in order to establish that union?—What affinity exists between Philosophy and Art?—What influence can be attributed to modern ideas on contemporary Art?—Does our epoch possess any new principle which may give to the Fine Arts a new expression and direction? Five members were selected at a meeting of general assembly of the Royal Academy, held on the 10th inst., to represent that body on this occasion.

These are, Sir E. Landseer, Messrs. E. M. Ward, D. Roberts, R. Westmacott, and G. T. Doo.

MUSIC AND THE DRAMA

NEW PUBLICATIONS.

The "People's" Tune-Book: a Class-Book of Church Music, &c. By Lowell Mason, Doctor of Music. (Low & Co.)—A more absurd book than this rarely comes to judgment. We say as much without censure because of the courageous complacency of its writer;—and because, to judge from the tone of certain periodicals, Dr. Lowell Mason affects the position of Oracle in the world of American psalmody.—He will hardly be bowed down to on this side of the Atlantic. Time will not be lost, for the good of such sincere persons as hold Art to belong to no country, by devoting a few paragraphs to this book. We will merely touch the Preface, in order to observe that Dr. Mason's assertion that his collection "contains all the variety which can ordinarily be desired for public, social, or private worship in church," &c., is a trifle ambiguous in its wording, as well as bold in its profession.—Following the Preface, comes a short manual of instruction. Chapter I. announces "three departments in the elements of music":—"1, Rhythms — *Tone-length*. 2, Melodies — *Tone-pitch*. 3, Dynamics — *Tone-power*." What earthly meaning will the above jargon convey to any student, save he be a Germanized-American or a semi-American-German?—The definitions, however, are consistently borne out by the illustrating chapters which follow. Dr. Lowell Mason omits, in his chapter on Notes the Breves;—and he might as well have said, that there is such a sub-division of the bar as of semi-quavers into demi-semi-quavers. The latter, however, we concede, do not belong to the "Tone-Rhythms" of Temple-worship, public or private.—When the student comes to the chapter of Time (here called "Measures") he will be rather puzzled, if he have ever looked at a page of music printed according to the fashions of the Old World. The signs in use are all discarded. He is bidden to follow "beats"; he is talked to about "barrings" (later on in the book, as we may see); he is invited, in a very few sentences, to penetrate the very heart of the mystery of major and minor scales, "Natural," "Harmonic" and "Melodic";—and in a subsequent chapter to catch up all that can be said about keys, without a single word of explanation, such as can lead the victim of his teaching into anything but obscurity and blunder.—When he comes to the explanation of "Dynamics"—he may learn, by way of novelty, that Poetry and Music are "long-conflicting belligerents," and receive some lessons in pronunciation, which are accredited in Dr. Mason's 'Hallelujah' and Mr. Root's 'Diapason.' The Dynamic student is to say "moun-tin" for mountain, and play other tricks with vowel and consonant by way of "reconciling the belligerents." There is an easier method, which is not to sing at all on any troublesome sound. A great Italian *soprano* has, for twenty years, gone through 'Let the bright Seraphim' as under—

Let the cherubic ho—in tuneful qui—
Touch their seraphic ha—with golden wi—

—Thus, we submit, the Dynamic students had better sing "*cap*" than "*captin*," or "*cert*" than "*certin*." To put this nonsense aside, there is no language which cannot be sung musically, just as it is spoken elegantly. Nothing can be harder for the vocalist to utter aright than the French close vowels,—yet who has ever found the same hard to hear when they have been given by Madame Cinti, by M. Dupres, by Madame Viardot?—Thus much of the solemn empiricism contained in what may be called the theoretical portions of this book. They will teach no new student,—they will correct no old lover of music. But when we come to examples—the bulk of the volume—we fare still worse. Dr. Lowell Mason obviously conceives that "Time was made for vulgar souls,"—and, so, has marked no time (we beg his pardon, "Rhythmic") to any tune in his collection. Hence novelties arise, which are more astounding than agreeable. Having made a law and a terminology for himself and his people, he notes down the tunes

in his book in a style which, to say the least of it, is "overcoming." The general idea which seems to possess him is to begin and end every tune slow;—so as to give the main accent of every musical phrase on the unaccented "belligerent" words. The arrangement of the words on the page is calculated to puzzle an adroit reader, the verses of every hymn being printed in their order, though every singer must either copy out his separate part, or else skip about from stave to stave, under many chances of bewilderment.—Lastly, a large proportion of the tunes are either dry or frivolous—resembling adaptations of familiar melodies awkwardly patched up, or aimless chains of notes, put on paper without selection or taste for melody. It is worth while that the plain truth should be told to America in a periodical to which frequent reference is made on questions of Art by Americans. Such teaching as Dr. Mason's book contains is radically bad in spirit, tending to engender pedantry in place of wholesome knowledge. There is a close correspondence betwixt the teaching and the tunes;—and, recollecting the hundreds of modestly-prepared, accurate and copious collections and extracts which exist,—it seems to us as superfluous as it is ill executed.

ROYAL ITALIAN OPERA.—'Martha' showed Mdlle. Patti in a new character; and her acting of this indicated, though slightly, a vein of shrewd comedy, more individual than aught which she has yet given to us.—As the tired, and selfish, yet not utterly bad-hearted, Maid of Honour, she was, in points, original and lady-like. This fifth character of hers, too, unlike *Amina*, *Lucia*, *Violetta* and *Zerlina*, is one without traditions, and its representative must think for herself. The style of Mdlle. Patti's singing seems to be fixed fast, and we continue to be less fascinated by it than our contemporaries. For one so correct and steady as she is, she falls oddly short of effect in concerted music, perhaps because there is no blending quality in her voice. She does not sing 'The Last Rose of Summer' either well or ill; but the melody got its usual *encore*. Her success, for the present, continues. Madame Nantier-Didiée is somehow falling out of the favour which, as an excellent singer and actress of the second class, she had justifiably earned. Some coarseness has crept into her style,—some pleasantness has departed from her voice. It may be feared that she has been "flying at too high game" in Russia, and has thus strained herself. M. von Flotow's 'Martha' neither startles by its freshness nor its force; but the music of it was welcome after the wacky 'Traviata' and the poor 'Ballo in Maschera' of Signor Verdi.—Madame Grisi has now only to take her farewell benefit; and she will then, we believe, have closed accounts with her London audience.—The painful pleasure (for such is a theatrical leave-taking) is fixed for Wednesday next. The performance will consist of the first act of 'Norma,' the third act of 'Les Huguenots,' the last act of 'La Favorite.'

HAYMARKET.—A new comedy, by Mr. Planché, founded on the French of M. A. Dumas' 'Un Mariage sous Louis XV.,' was produced on Friday week. The incidents are transferred to English ground, and well enough represent the tone of our manners in the eighteenth century. An aristocratic marriage, based on interest, finds Lord and Lady Fitzpatrick in an uncomfortable position. The period, in fact, of their early indifference has been survived, and a different kind of relation, unconsciously to the parties, commenced. Events, at last, show that they have taken an interest in one another's movements; this gradually ripens into mutual affection, and thus the temptations by which both were surrounded are finally counteracted and surmounted. Mr. Charles Mathews comported himself with a due degree of aristocratic ease; but Mrs. C. Mathews was certainly too demonstrative. An amusing part is introduced for Mr. Buckstone, that of a retired market-gardener, who is solicited to become a Member of Parliament, but desires to test his wife's fidelity before he accepts the invitation. Mr. Howe, her former lover, is appealed to by the feeble-minded husband, and lends his aid in a vain endeavour to shake the lady's constancy.

Another part, contrasting with the tone of manners in high life, is rather obstreperously interpreted by Mrs. Wilkins, as a vulgar aunt of the lady's, who arrives on the scene to interpose her inefficient aid in the solution of the fashionable difficulties under which the wedded couple labour. After the play, Mr. Buckstone delivered his usual annual Address, in which he adverted to the successes of the season. We quote a sentence or two:—"The Overland Route' has been taken 163 times,—'The Babes in the Wood' wandered 32 nights before they were buried,—'A Duke in Difficulties' did not leave the manager in any,—'Black Sheep' produced amongst us many good legs of mutton,—'The Miller and his Men' brought an excellent supply of grist to our mill,—our pantomime, 'Queen Lady-bird,' flew away home' for 70 nights,—'Fitz-smythe, of Fitzsmythe Hall,' was intruded upon on 54 occasions,—and therefore, as regards our success, and when I think of the unusual competition in the dramatic world that has existed, I may fairly quote the second title of to-night's new comedy, and say, 'it might have been worse.'" The address was greatly applauded, and the author honoured with a shower of bouquets. Among them was a laurel-crown, which Mr. Buckstone placed on his head, assuming a comic dignity as he passed from the stage. Such "admirable fooling" greatly pleased the audience.

PRINCESS'S.—Miss Mary Provost, an American lady, said to be the grand-daughter of the first bishop of the Established Church in New York, made her *début* at this theatre last week in the character of *Rosalind*, in Shakespeare's 'As you Like it.' We regret that, as an actress, this lady is wanting in that delicacy of touch which is required in such a part, though she has evidently a fair amount of intelligence, and occasionally showed great cleverness in her by-play. Mr. Phelps was the *Jaques*, and supported the character with his usual exactness. The play was altogether very smoothly and carefully rendered.

ADELPHI.—Mr. Webster made a speech after the last performance of 'The Colleen Bawn' on Saturday, in which he stated that in London and the provinces, Mr. and Mrs. Boucicault had acted in the piece for more than 360 successive nights. On Monday, he re-appeared in 'The Dead Heart,' to which was added a farce called 'The Pretty Horsebreaker,' the materials of which are sufficiently obvious from the title. Such occasional pieces may be safely left to speak for themselves.

STRAND.—Miss Marie Wilton has assumed a new character in a piece recently produced, entitled 'More precious than Gold,' which proves to be a new version of 'The Little Treasure,' made by Mr. C. S. Cheltenham. In the assumption of this simple part, Miss Wilton is less happy than in the generality of her impersonations.

MUSICAL AND DRAMATIC GOSSIP.—Dr. Bennett has been applied to (as we hold was fitting) to compose the English music for the Great Exhibition of 1862, and to conduct his own composition, as was no less fitting.

It appears that there is to be an instrumental *Solo* at the Birmingham Festival; played by Miss Arabella Goddard.

Among the concerts of the week, that of *Madame Corinna de Luigi*, has been held. The lady may be remembered to have sung in England some years ago as pupil of Signor Rossini—one of the many holders of "testimonials" from the *maestro*.—The last opera-concert took place at the Crystal Palace yesterday. These have hardly been as successful as usual, we are told.—Mr. P. Penna's song-entertainment is over for the season.—We should notice that an agreeable feature in Mr. Buckstone's benefit performance was the glee-singing of Miss Fosbroke, Mrs. Dixon, Messrs. Matthison and Hodson, who have formed themselves into a party called the "Vocal Concert Quartett," and are likely to enjoy a fair share of patronage. This, by the way, may be mentioned as an offset of Mr. Henry Leslie's choir.—In our list of London concerts and performers during

the passing season, it would seem that some have been overlooked, which, and who, have "made *furor*" here, if we may believe Parisian journals. Let us rectify a mistake somewhere by assuring such French readers as the *Athenæum* possesses that certain of the artists, successful according to the French musical press, have come and gone without making the slightest noise. M. Sarasate, the violin-player, is one—M. Engel, who delights in the harmonium, another. The mischief done by such mis-statements, easily to be confounded with self-praise, rises up too perpetually not to make rectification of statements so utterly baseless a duty—even though it drive us on the disagreeable task of authenticating the truth by singling out instances.—A few days more, and the artists now in London will be scattered hither and thither; to begin anew their exhausting career at the different foreign "waters" or home provincial festivals. The life totally without rest or pause which those making their way *must*, and those who have made their way *will*, lead,—tells badly for Art, let it indicate ever so clearly the desires of a public whose interest in music multiplies at the rate of "compound interest."

At last, largely owing, we believe, to the persistence of Prof. Donaldson,—the sum of 2,000*l.* has been wrung from the administrators of the Reid legacy, so often referred to, and a new organ, purchased therewith from Mr. Hill, our well-known builder, has been placed in the music class-room of the Edinburgh University. The instrument has four manuals and a pedal-board, contains 2,580 pipes, 40 stops, and 5 couplers. Let us hope that it will be wisely turned to account.

A pungent and thoroughly well-reasoned article in the *Daily Telegraph* of the 11th ult. must not be overlooked, for its coincidence in tone with the shorter paragraph devoted by us a fortnight since to the prospectus of "the English Opera Association (limited)." Our contemporary goes at length into the scheme, with its magnificent financial plans of raising 50,000*l.* by shares of 2*l.* each,—its no less magnificent laws and by-laws, providing for a number of "fingers in the pie" rare in the annals of projection,—and comments on the construction of the Committee as little calculated to gain confidence or to insure united and harmonious action. Perhaps if such remonstrances become more general, they may save well-intentioned persons from wasting their time and energy on schemes which offer not the slightest rational hope of success.

Madame Viardot was to re-appear at the Grand Opéra, in the part which she exhausted once for all when "creating" it there—in M. Meyerbeer's *Fides*—on Wednesday last.

M. Benazet's usual liberal musical entertainments are to be offered as usual to the players, idlers, and invalids of Baden-Baden in August. The customary grand concert, conducted by M. Berlioz there, will include his 'Harold' Symphony and selections from his 'Requiem.'—The coming German opera-season at Vienna is to open with a translated version of Donizetti's 'L'Elisir.'—Signor Verdi's 'Il Trovatore' is chosen for the King's birthday at Hanover. Great news, this, for the musicians of the future!—Better tidings, for all the world's sake, are those which announce the coming revival of Spontini's 'Nourmahal' at Berlin.—We can add to the above a little opera-gossip from a private letter. "Did you happen to hear," writes our Correspondent, "that the Dresden *prima donna*, Madame Bürde-Ney, has positively refused to sing in any of Herr Wagner's operas? By this she risked her engagement: one with a high salary; but the manager was put to silence by her demanding a jury of vocalists, who agreed that Herr Wagner's was no vocal music at all, nor what a singer should be required to sing." Most cases of self-assertion such as the one recorded imply a false principle. Let it be recollected, however, that instrument-players cannot play what is written out of their instrument, and that a Mozart changed the well-known supernatural music of the cemetery-scene in 'Don Juan,' in accommodation of a recalcitrant trombonist. "Heaven forbid," said the great master (in nothing greater than in the obligingness of genius) "that

I should teach you to play on your instrument!"—and altered the part accordingly. But the new Germans—not quite Mozarts—treat the voice *Legree*-fashion;—brutally, as despots use their slaves.—Strange as it will seem to those who cling to by-gone reputations, and who, confounding North and South, still cling to the idea that wherever the German tongue is spoken the land flows with "the milk and honey" of music,—it may be told that last month a festival of male part-singers was held in one of the Danube towns for the first time—Krems having been the village-town selected. The contingent of singers was made up from places as far off as Vienna and Prague, Presburg, Salzburg, and Budweis—and from the neighbouring towns and villages, which give so picturesque a beauty to the noble Austrian river.—A prize has been offered by the Society of Friends of Music in Vienna for two new symphonies to be performed there during the coming concert-season. The umpires named are Dr. Ambros of Prague, Herr Hiller of Cologne, Dr. Liszt of Weimar, Herr Reinecke of Leipzig, and Herr Volckmann of Peth.—Among late musical publications from the German press may be signalled a new pianoforte *Concerto* by Herr Brahms (which may be worth looking after), and an edition of the pianoforte score of Mr. Wallace's 'Lurline,' with German text.—Sebastian Bach's Christmas Oratorio is now under revival in many German towns, Stuttgart among the number.—We cannot close a paragraph of German miscellanies better than by this announcement, which is one that long ago ought to have been made in London,—had the Bach Society really lived elsewhere than on paper, and among a few professors expending their energy on raptures, in places where the public doth not enter. It would be well to make the performance of this Oratorio one of our English offerings during the next musical season, which will be rich in patronage, and should be full of activity.

MISCELLANEA

Fasting in Scotland.—Mr. Buckle has, in regard to this subject, fallen into a strange error which pervades many pages of his second volume, and calls forth from him some strong reflections which, in Scotland, can only be felt as ludicrous. Giving a minute account of a correspondence between the Presbytery of Edinburgh and Lord Palmerston, in 1853, when the cholera impended, he presumes that when the Presbytery proposed "a day of fasting and humiliation" a literal and corporeal fast was contemplated. Now while the name of fasting remains, the thing, except among the few Roman Catholics and, perhaps, also a very few Ultra-Episcopalians, has long ceased in Scotland. It may, without the least hesitation, be affirmed that had the demand of the Edinburgh Presbytery been complied with, not a single human being would have fasted or thought of fasting. There would merely have been on a certain day public worship. Whatever may have been the superstition of Scotland, it has long ceased to take the direction of fasting, which is rather regarded as a Popish observance, and has its share of the general abhorrence and contempt of Popery. The parochial fast-days have, indeed, been absolutely reversed in their use, and are to some extent feast-days. It were better that the name should follow the desuetude of the reality, though no one could anticipate that it should so oddly deceive a man of such intelligence and discernment as Mr. Buckle. There is reason to believe that actual fasting in Scotland did not long survive the cessation of the troubles of the Scotch Church in 1688. From that epoch it seems to have silently and gradually declined. It is difficult to say when it finally died out; but it is certain that, with the slight exceptions already admitted, no one now living, in Scotland, ever fasted or remember any who did. K.

TO CORRESPONDENTS.—L. R.—T. B.—G.—E. G. R.—D. F.—H. H.—E. B.—The New Philosophy—C.—G. N.—L. M.—E. V.—received.

*. The Title-page and Index for our half-yearly volume are given with the present number, on a separate sheet, as a Supplement, gratis.

BRITISH ARTISTS, from HOGARTH to TURNER. By WALTER THORNHURST. This new work contains Biographical Sketches of GAINSBOROUGH, LAWRENCE, WEST, REYNOLDS, SCOTT, BLAKE, STOTHARD, MORLAND, FUSELI, NOLLEKENS, WILSON, BARRY, CRUIKSHANK, SHERWIN, OSBWAY, &c. London: published by Hunt & Blackett.

AN INQUIRY into the TRUTHFULNESS of LORD MACAULAY'S Portraiture of GEORGE WAX. In Two Lectures. By J. S. ROWNTREE, Author of 'Quakerism, Past and Present.' York: T. Brady. London: A. W. Bennett, Bishopsgate-street.

Just published, in small 4to. sewed, price 1*s.*
A GARLAND of SONGS; or, an ENGLISH LIEDERKRANZ. Edited by the Rev. C. S. BERE, Rector of Uplaman, Tiverton, Devon. The Music of each Song is written in Mr. Cawen's Tonic Sol-fa, as well as in the usual notation. London: Aylott & Son, 8, Paternoster-row, Depot of the Church of England Book-Hawking Union.

Under the Special Patronage of H.R.H. the Prince Consort.
THE HISTORY of INDUSTRIAL EXHIBITIONS.

By BLANCHARD JERROLD. Author of 'The Life and Remains of Douglas Jerrold,' 'Imperial Paris,' 'The French under Arms,' 'The Chronicles of the Crutch,' &c. &c. This authentic History of the Industrial Exhibitions which have taken place in various parts of the world, will appear in Monthly Two-shilling Parts; and will include a History of the forthcoming Great Exhibition of 1862. The Work will be in Twenty Monthly Parts. Subscribers, who forward the price of the entire Work (2*l.*) in advance to the Publisher, will receive the Monthly Parts, post free. The First Part will appear on the 1st of September. Advertisements for Part I. will be received to the 15th of August. Advertisers who have obtained Exhibition Medals, will be in a special and separate list. For the Proprietor, Kent & Co. Paternoster-row.

Price 1*s.* 6*d.*
THOUGHTS on a FEW SUBJECTS of POLITICAL ECONOMY. By JOHN CAZENOVE. Also, price 1*s.*, Supplement to the above, containing, among other additions, a Letter from Mr. Pennington on the London Banking System. Simpkin, Marshall & Co. Stationers' Hall-court.

In fcap. cloth, red edges, price 1*s.*
THE NEW TESTAMENT, translated by SAMUEL SHARPE. Hatfield, Tottenham-court-road.

BY THE AUTHOR OF 'PEEP OF DAY.' Just published, 18mo. cloth, with Fifty-two illustrations, price 3*s.*
STREAKS OF LIGHT; or, Fifty-two Facts from the Bible for the Fifty-two Sundays of the Year. By the Author of 'Peep of Day,' 'Near Home,' &c. London: Hatchard & Co. 187, Piccadilly.

THE HUNDRETH THOUSAND.
TUPPER'S PROVERBIAL PHILOSOPHY, the Hundredth Thousand, 18mo. cloth, gilt leaves, 5*s.*; also—The Illustrated Edition, 4to. extra cloth, 2*l.* The Library Edition, crown 8vo. cloth, 8*s.* London: Hatchard & Co. 187, Piccadilly; and all Booksellers.

Just published, Fourth Edition, with additional Illustrations from Bunsen's Egypt, Horner's Nile-Deposits, and Darwin on Species, and Replies to 'Types of Mankind,' and 'Goodwin on Mosaic Cosmogony' in 'Bunsen and Reviews,' 8vo. cloth, 3*s.* 6*d.*
SCRIPTURE and SCIENCE—NOT at VARIANCE. With Remarks on the Historical Character, Plenary Inspiration, and Surpassing Importance of the Earlier Chapters of Genesis. By JOHN H. PRATT, M.A., Archdeacon of Calcutta. "We noticed the first edition of this valuable Treatise, and we are glad that so conservative and yet so thoughtful and learned a production should have found so many readers."—*Clerical Journal*. London: Hatchard & Co. 187, Piccadilly.

CAMBRIDGE PRIZE POEM.
Just published, Fifth Edition, fcap. cloth, price 7*s.*
POEMS. By THOMAS EDWARDS HANKINSON, M.A., late of Corpus Christi College, Cambridge. Edited by his Brother. London: Hatchard & Co. 187, Piccadilly.

MISS BURDETT COULT'S PRIZES for COMMON THINGS.—Just published, New Edition, 8vo. cloth, price 1*s.* 6*d.* a SUMMARY ACCOUNT of PRIZES for COMMON THINGS, offered and awarded by Miss Burdett Coult, at the Whitlands Training Institution. London: Hatchard & Co. 187, Piccadilly.

TYTLER'S TALES OF THE GREAT AND BRAVE. Just published, New Edition, the two Series in One Volume, fcap. cloth, price 4*s.* 6*d.*

TALES OF THE GREAT AND BRAVE. By M. FRASER TYTLER, containing: Biographies of Wallace—Bruce—Edward the Black Prince—Joan of Arc—Richard Cœur de Lion—Prince Charles Stuart—Buonaparte—Sobieski K. of Poland—Peter the Great—Washington—Henry de Larocque—Jaquelin—Hofer—and Wellington. London: Hatchard & Co. 187, Piccadilly.

In 8vo. price 3*s.* 6*d.* cloth,
THE THRESHOLD of ATRIDES. By GEORGE F. PRESTON. London: W. Kent & Co. Paternoster-row.

MR. ST. JOHN'S HISTORY OF ENGLAND, FROM B.C. 55 TO A.D. 1067. Nearly ready, 2 vols. 8vo.

HISTORY of the FOUR CONQUESTS of ENGLAND: Roman, Anglo-Saxon, Danish, and Norman. By JAMES AUGUSTUS ST. JOHN. The Author has availed himself of the valuable information on important points of English History afforded by the Chronicles published by direction of the Master of the Rolls. Smith, Elder & Co. 65, Cornhill.

EVERY SATURDAY, 24 pages, price 4d. of all Booksellers, or stamped to go by post, 5d.

NOTES AND QUERIES:

A MEDIUM OF INTER-COMMUNICATION FOR
LITERARY MEN, ARTISTS, ANTIQUARIES,
GENEALOGISTS, &c.

NOTES AND QUERIES, which is now to be found in the Library of nearly every Club, College, and Literary Institution, and in the hands of nearly every book loving man, in the United Kingdom, was established for the purpose of furnishing to all lovers of Literature a COMMONPLACE-BOOK, in which they might, on the one hand, record for their own use and the use of others those minute facts,—those elucidations of a doubtful phrase, or disputed passage,—those illustrations of an obsolete custom,—those scattered biographical anecdotes, or unrecorded dates,—which all who read occasionally stumble upon;—and, on the other, of supplying a medium through which they might address those Queries, by which the best informed are sometimes arrested in the midst of their labours, in the hope of receiving solutions of them from some of their brethren.

The Numbers already published have contained Articles by the following eminent Writers, besides many others equally distinguished, who have chosen to preserve their *anonymo*:—

Lord Braybrooke	Right Hon. Sir G. C. Lewis
Rev. Thomas Boys	M. A. Lower, Esq.
John Britton, Esq.	W. B. Mac Cabe, Esq.
John Bruce, Esq.	Rev. Dr. Maitland
J. Burt, Esq.	Sir F. Madden
W. D. Christie, Esq.	J. H. Markland, Esq.
J. P. Collier, Esq.	Rev. J. E. B. Mayor
W. D. Cooper, Esq.	Lord Monson
Bolton Corney, Esq.	R. M. Milnes, Esq. M.P.
P. Cunningham, Esq.	J. G. Nichols, Esq.
Rev. T. Corser	George Offer, Esq.
Right Hon. J. W. Croker	George Ormerod, Esq.
J. Crossley, Esq.	J. R. Planché, Esq.
Dr. Dalton	E. F. Rimbault, Esq.
Professor Dr. Morgan	Rev. Dr. Rock
Dr. Diamond	S. W. Singer, Esq.
Hepworth Dixon, Esq.	E. Smirke, Esq.
Dr. Doran	A. Steinhilber, Esq.
Sir Fortunatus Durrant	George Stephens, Esq.
Sir Henry Ellis	M. E. Strickland, Esq.
C. Forbes, Esq.	Earl of Shaftesbury
E. Fox, Esq.	Sir J. E. Tennant
Rev. W. Fraser	W. Moy Thomas, Esq.
Rev. A. Gatty	W. J. Thoms, Esq.
Henry Hallam, Esq.	B. Thorne, Esq.
J. O. Halliwell, Esq.	Rev. J. H. Todd, D.D.
E. Hawkins, Esq.	Sir W. C. Trevelyan, Bart.
Samuel Hickson, Esq.	T. H. Turner, Esq.
Rev. J. Hunter	Rev. Henry Walter
Rev. John Jebb	Albert Way, Esq.
Douglas Jerrold, Esq.	Benjamin B. Wilken, Esq.
Rev. Dr. Kennedy	J. Yarrell, Esq.
R. J. King, Esq.	J. Yeowell, Esq.
Rev. L. B. Larking	do. do.

NOTES AND QUERIES contains every Week a variety of amusing Articles on some of the following Subjects:—

ENGLISH, IRISH, and SCOTTISH HISTORY.
Illustrated by Original Communications and Inedited Documents.

BIOGRAPHY.
Including Unpublished Correspondence of Eminent Men, and Unrecorded Facts connected with them.

BIBLIOGRAPHY.
More especially of English Authors, with Notices of Rare and Unknown Editions of their Works, and Notes on Authorship of Anonymous Books.

POPULAR ANTIQUITIES and FOLK-LORE.
Preserving the fast-fading Relics of the Old Mythologies.

BALLADS and OLD POETRY.
With Historical and Philological Illustrations.

POPULAR and PROVERBIAL SAYINGS.
Their Origin, Meaning, and Application.

PHILOLOGY.
Including Local Dialects, Archaisms, and Notes on our Old Poets.

GENEALOGY and HERALDRY.
Including Histories of Old Families, Completion of Pedigrees, &c.

MISCELLANEOUS NOTES, QUERIES, and REPLIES,
On Points of Ecclesiastical History, Topography, Fine Arts, Natural History, MISCELLANEOUS ANTIQUITIES, NUMISMATICS, PHOTOGRAPHY, &c.

The Subscription for STAMPED COPIES for Six Months, forwarded direct from the Publishers (including the Half-yearly INDEX), is 11s. 4d., which may be paid by Post-Office Order, payable to Messrs. BELL & DALDY, 186, Fleet-street, E.C.

NOTES and QUERIES may be procured by order of every Bookseller or Newsmen, or of the Publishers,

BELL & DALDY, 186, Fleet-street, E.C.

This day, fcap. 8vo. cloth, 2s. 6d.

SHAKESPERE'S CURSE, and other Poems.

London: Bosworth & Harrison, 215, Regent-street.

TWO MAPS of the WORLD, with the LINES of MAGNETIC VARIATION, and FOUR CHARTS of the STARS.

By COLONEL SIR HENRY JAMES, R.E. F.R.S. &c.
Unbound in a wrapper, with Title-page and Table 10s. 6d.
Mounted, in a plain quadrant-shaped case of leather 21s.
Mounted, in an extra gilt quadrant-shaped case of leather 30s.
Magnetic Variation Maps, to be had separately each 3s.
Charts of the Stars, ditto ditto ditto ditto 2s.
Sold by E. Stanford, 6, Charing Cross, London, S.W.

Now ready, Cheap Edition, post 8vo. 1 vol. 5s.

THE WEDDING GUESTS.

By MARY C. HUME.
London: F. Pitman, 20, Paternoster-row, E.C.

Now ready, for 1861, with Coloured Plates,

NELSON'S TOURIST'S HANDBOOKS for ENGLAND, SCOTLAND, and IRELAND. Comprehensive, Accurate and Cheap.—Nelson & Sons, London, Edinburgh, and New York; all Booksellers; and at the Railway Stations.

Fcap. 8vo. cloth, 1s. 6d.

CÆSARIS (C. JULII) COMMENTARIORUM DE BELLO GALLICO, LIB. I.—IV., with Notes explanatory of the Text, by the Rev. J. R. MAJOR, M.A. F.R.A.

London: William Tegg, Pancras-lane, Queen-street, Cheapside.

Just published, in fcap. 8vo. price 4s. 6d. cloth.

LIFE MELODIES.

By THOMAS MOORE.

London: Edward Moxon & Co. 44, Dover-street.

1 vol. greatly improved, Second Edition, 10s. 6d.

ASTHMA, its Varieties and Complications. With Practical Remarks on their Specific Treatment. Illustrated by Cases and Plates coloured from Nature. To which is annexed a Succinct Treatise on the Principal Diseases of the Heart. By F. H. RAMADGE, M.D. F.R.C.P. &c.

London: Longman and Co.

J. H. DALLMEYER (Son-in-Law and Pupil of the late ANDREW ROSS)

Respectfully begs to inform the Scientific Public that he exclusively manufactures the ASTRONOMICAL TELESCOPE according to A. R.'s processes, who has also bequeathed to him the whole of that faculty.

For particulars of J. H. D.'s recent IMPROVEMENTS in MICROSCOPI OBJECT-GLASSES, PHOTOGRAPHIC LENSES, &c. see Catalogue, which may be had on application at 19, BLOOMSBURY-STREET, Oxford-street, W.C.

TO TOURISTS and SEA-SIDE VISITORS.—CALLAGHAN'S OPERA, RACE and FIELD GLASSES, in every variety of size and mounting, from 30s each; portable and powerful. May be had at Messrs. Smith & Son's book-stalls at the Railway Stations throughout the Kingdom, and at Callaghan's, Optician, 22, New Bond-street, W., corner of Conduit-street. Sole Agent for the celebrated Opera, Race and Field Glasses made by Voigtlander, Vienna; also their Photographic Lenses.—Catalogues of the latter free for two stamps.

This day is published, price 5s.

THE MASSACRES IN SYRIA.

By J. LEWIS FARLEY,

Author of 'Two Years in Syria,' &c.

"Mr. Farley's book is unquestionably the work of an honest man, and Mr. Farley will be believed: he has defended a just cause, he has defended it with ability, with tone of sincere conviction, with an authority which carries persuasion to the minds of his readers."—*Courrier d'Orient, Constantinople.*

"Any contribution to the authentic history of those deplorable outbursts of fanatical hatred which took place in the Lebanon and at Damascus just a year ago, ought to be welcomed as exceedingly valuable and opportune."

Saturday Review.

COOKERY for THE MIDDLE CLASSES.

FRANCATELLI'S COOK'S GUIDE.

Mr. Francatelli, already distinguished by his 'Modern Cook,' as the acknowledged authority for the Upper Ten Thousand, is now about to produce a

COOK'S GUIDE for THE MIDDLE CLASSES,

which will embrace a HANDBOOK of CONFECTIONERY, and Preserving and Pickling in all their Branches.

In order to bring it within the reach of the Middle Classes, the Publisher has resolved to issue the work at Five shillings, with upwards of Forty Illustrations.

As this will be an unusually favourable opportunity for Advertisers, Mr. Bentley begs to annex a scale of charges for Advertisements in 10,000 copies. Advertisers will remember, that unlike most books which are read and put aside, a Cookery Book is in daily use, and the advertisements are likely, therefore, to be constantly looked at.

Whole Page £5 0 0 | Half Page £3 12 6 | Quarter Page £1 7 6

NEW BURLINGTON-STREET, July, 1861.

Now ready, Vol. IV. price 14s.

M. GUIZOT'S PERSONAL MEMOIRS.

CONTENTS.

Guizot, &c.

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

* * * The New Work, by the Editor of 'Enquire Within,' entitled THE FAMILY SAVE-ALL, is now ready. The Sale of the Author's Educational and Economical Works amounts to Half-a-Million Volumes in Great Britain, and in America to the same Number.

The Proprietor of 'THE FAMILY SAVE-ALL' begs to remind the Trade, that none of his Works, although very numerous, have undergone reduction of price through forced sales; and that the numerous Works brought out in imitation of his Titles and Subjects have proved absolute failures, while his own productions have been uniformly successful.

W. KENT & Co. 23, Paternoster-row.

THE EPISCOPAL CHURCH IN AMERICA.

CHARLES EDWARD MUDIE,

New Oxford-street, London; Cross-street, Manchester; and New-street, Birmingham.

EQUITABLE ASSURANCE OFFICE,

NEW BRIDGE-STREET, BLACKFRIARS.

ESTABLISHED 1762.

DIRECTORS.

THE RIGHT HON. LORD TREDEGAR, President.

William Dacres Adams, Esq.
Phillip Hardwick, Esq.
William Samuel Jones, Esq.
John Alldin Moore, Esq.
William Frederick Pollock, Esq.

Charles Pott, Esq.
Rev. John Russell, D.D.
James Spicer, Esq.
John Charles Templer, Esq.
Right Hon. Lord Tredegar.

John Charles Burgoyne, Esq.
Lord George Henry Cavendish, M.P.
Frederick Cowper, Esq.
Richard Gosling, Esq.
Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL Office. The reserve, at the last "rest," in December, 1859, exceeded three-fourths of a million sterling, a sum MORE THAN DOUBLES the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded **Three Millions and a Half**, being more than 100 per Cent. on the amount of all those Claims.

The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was **£1,977,000**, and made, with former additions then outstanding, a total of **£4,070,000**, on Assurances originally taken out for **£6,252,000** only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.**£3,006,297**—Cash lent on Mortgages of Freehold Estates.**£300,000**—Cash advanced on Railway Debentures.**£83,590**—Cash advanced on security of the Policies of Members of the Society.Producing annually, **£221,482**.The total Income exceeds **£400,000** per Annum.

POLICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1862 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, without any deduction; and the Directors will advance *ninety* of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war. A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

HIGH HOLBORN, LONDON, W.C.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory; and whilst we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR
MICROSCOPE.

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

MALTWOOD'S FINDER FOR THE
MICROSCOPE.

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent injections.

ICELAND SPAR.

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPES.

GORHAM'S KALEIDOSCOPIC
COLOUR TOP, &c.

Catalogues, giving full particulars, may be had on application, or sent post free.

Every description of Life Assurance business is transacted. Advances are made on Mortgage of Freehold Property, Life and Reversionary Interests, &c. and also to Assurers on Personal Security. The Assets are 340,000, and the Income is over 63,000, per annum. Four-fifths of the entire Profits are appropriated to the Assured. Three divisions of considerable amount have already taken place.

WILLIAM RATHAY, Actuary.

NORWICH UNION LIFE INSURANCE SOCIETY.—Instituted 1803.

Secretary.—Sir SAMUEL BIGNOLD.

The whole of the profits divided with the assured. Ample security offered by an accumulated capital of 2,000,000. One-half of the first five annual premiums may remain as a permanent charge upon policies granted for the whole duration of life.

The Income of the Society is upwards of 237,000. The amount insured is upwards of 5,073,000. Since its commencement 32,700 Policies have been issued, and 5,666,555, paid to the representatives of 6,354 deceased members. The Bonuses may be applied at the option of the Assured as follows:—

As a Bonus added to the Policy, or the amount may be received at once, that is, its cash value, or it may be applied in reduction of the future annual premium.

The rates of premium are lower than those of some Offices by nearly 10 per cent., a benefit in itself equivalent to an annual bonus.

For Prospectuses apply at the Society's Offices, Surrey-street, Norwich, and 6, Crescent, Blackfriars, London.

GENERAL LIFE AND FIRE ASSURANCE COMPANY.

Right Hon. C. P. Villiers, M.P.
Edward Wilson, Esq.

FIRE and LIFE INSURANCES effected on the most advantageous terms. Apply to THOMAS PRICE, LL.D., Secretary, or to the Local Agents of the Company.

The Fire Premiums of 1860 were upwards of 45 per cent. more than those of 1859, whilst the losses were 15 per cent. less. The New Life Business has more than trebled within the last four years.

The Life Reserve Fund is more than six times the annual Life Income. The Assets are upwards of 250,000.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE.

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED	£14,621,754
2. TOTAL BONUSES DECLARED	9,083,049
3. SUMS ASSURED AND BONUSES EXISTING	10,886,061
4. TOTAL CLAIMS PAID EXCEED	2,600,000
5. INVESTED FUNDS	3,601,764
6. ANNUAL REVENUE	426,738

Forms of Proposal, detailed Prospectuses and Reports, and every information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALEIGH, Manager.

J. J. C. ANDERSON, Secretary.

Edinburgh, 5, St. Andrew-square.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of the Society's Agents, during the current year, will secure One Bonus more than those of later date.

FREE ASSURANCE.

THE POLICIES OF THE

STANDARD LIFE ASSURANCE COMPANY.

PANIES are relieved from all Restrictions as to Residence Abroad (except in special cases); and they are otherwise so framed as to afford the most complete security in connexion with Family Provisions, Marriage Settlements, Loan Transactions, and the various other purposes in connexion with which the protection of Life Assurance is sought.

THE

STANDARD LIFE ASSURANCE COMPANY.

PANIES was established in 1835; and, during the last fourteen years, the annual Average of New Assurances has exceeded Half-a-Million sterling, being the largest business transacted in that period by any Life Assurance Office. The New Assurances effected in 1860 alone were upwards of 700,000. The business is a purely home business, the Company having no Agencies out of the United Kingdom.

Accumulated Fund.....£1,836,894 19 4

Annual Revenue.....£204,161 13 7

THE SIXTH DIVISION OF PROFITS

was made on 9th May last, when it was reported that the Bonus Additions were at the rate of 150 per cent. on the sum assured on Policies effected in 1835; 100 per cent. on Policies effected in 1831; and 50 per cent. on Policies effected in 1840. Next Division of Profits in 1865.

THE INVESTIGATION REPORT.

showing these important advantages, is now ready, and may be had at the Office, or Agencies of the Company.

H. JONES WILLIAMS, Resident Secretary.

London.....33, King William-street.

Edinburgh.....3, George-street (Head Office).

Dublin.....66, Upper Sackville-street.

Glasgow.....35, St. Vincent-place.

GOVERNMENT SECURITY LIFE POLICIES.

THE CONSOLS ASSOCIATION, 429, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.
2. It lends, or returns to Insurers ON DEMAND at any time, about One-Half of all Premiums paid.
Undoubted Security for Money, with a Liberal Rate of Interest.
The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
Full information may be obtained on application to THOMAS H. BAYLIS, Managing Director.

LIFE ASSURANCE.—Special Notice.—The

next investigation into the Profits of the Life Department of the SCOTTISH UNION INSURANCE COMPANY will be made as at 1st August, 1861, and parties taking out Policies before that date will participate in the division.

635 New Policies, for 204,700, yielding 9,824,64. 2d. of New Premiums, were issued during the year ending 1st August, 1860.

Thirty days' grace allowed for the year ending 1st August, 1860, to renew Life Insurances, during which time, on payment of the premium, the Company hold themselves liable.

No extra Premium charged for Members of Volunteer or Rifle Corps within the United Kingdom.

LONDON BOARD.

President.—The Right Hon. the EARL of MANSFIELD.

ANDREW FRANCIS, Secretary.

NORTH BRITISH INSURANCE COMPANY, 1809.

Incorporated by Royal Charter and Act of Parliament.

Policies opened during the current year will be entitled at next distribution of Profits, in December, 1865, to rank for Five Years' Bonus, which at last investigation ranged from 25. to 35. per cent. per annum on the sums assured. It is expected that the great improvement in the business of the Company of late years will beneficially affect the forthcoming one, 741 New Policies for 475,849, having been opened last year.

HEAD-OFFICE—64, Princes-street, Edinburgh.

MUTUAL BRANCH.

Assurers on the Bonus system are entitled, after five years, to participate in nine-tenths, or 90 per cent. out of the profits.

The profit assigned to each policy can be added to the sum assured, applied in reduction of the annual premium, or be received in cash.

At the first division a return of 30 per cent. in cash on the premiums paid was declared; this will allow a reversionary increase, varying, according to age, from 60 to 35 per cent. on the premiums, or from 5 to 15 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit for seven years, or one-third of the premium may remain for life as a debt upon the Policy at 5 per cent., or may be paid off at any time without notice.

Claims paid one month after satisfactory proof of death.

Loans upon approved security.

No charge for Policy Stamp.

Medical Attendants paid for their reports.

Persons may, in time of peace, proceed to or reside in any part of Europe or British North America without extra charge.

No extra charge for the Militia, Volunteer Rifles, or Artillery Corps on Home Service.

The Medical Officers attend every day, at a quarter before Two o'clock.

E. BATES, Resident Director.

ACCIDENTS OF ALL KINDS, AND FROM ANY CAUSE.

may be provided against by an Annual Payment of 2s. to the RAILWAY PASSENGERS' ASSURANCE COMPANY, which secures 1,000, at death by Accident, or 6s. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.

ONE PERSON in every TWELVE Insured is injured yearly by ACCIDENT.

75,000, has been already PAID as COMPENSATION.

For further information apply to the Principal Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 4, Old Broad-street).

ANNUAL INCOME, 40,000.

CAPITAL, ONE MILLION.

WILLIAM J. FIAN, Secretary.

64, Cornhill, E.C., January, 1861.

Notices of Communications intended to be read to the Association, accompanied by a statement whether or not the author will be present at the Meeting, may be addressed to JOHN PHILLIPS, M.A. LL.D. F.R.S., Assistant General Secretary, University Museum, Oxford; or to R. D. DARRISHER, Esq. B.A. F.G.S. ALFRED NIELD, Esq. ARTHUR RANFORD, Esq. M.A., and Professor ROBERT, B.A., Local Secretaries, Manchester.

JOHN TAYLOR, F.R.S., General Treasurer.
6, Queen-street-place, Upper Thames-street, London.

QUEENWOOD COLLEGE, Four Miles from Bridgwater Station, South-Western Railway, Hampshire.

The Course of Instruction embraces Mathematics, Natural Philosophy, Theoretic and Practical Chemistry, English, Classics, Foreign Languages, Practical Surveying, Levelling, &c., Mechanical and Free-hand Drawing and Music. The Principal is assisted by Ten resident Masters. The position of the Establishment is beautiful, and the advantages various and unusual. Attention is invited to the Prospectus, which may be had on application. The next half-year will commence on the 1st of August.

Queenwood College, Stockbridge, May 31, 1861.

CIVIL SERVICE, WOOLWICH, &c.— GENTLEMEN are respectfully PREPARED for the CIVIL and MILITARY EXAMINATIONS, or for the UNIVERSI- TIES, by an M.A. of long experience as a Private Tutor in Cam- bridge, assisted by competent Masters in the various branches required. For particulars, apply to the Rev. the Principal, 8, York-terrace, or to Messrs. RALPH BROTHERS, School Bookellers, 150, Aldersgate-street, London.

THE SCIENTIFIC and ENGINEERING SCHOOL, at the COLLEGE, CHESTER.

This SCHOOL is recognised by the SECRETARY of STATE for INDIA, "as possessing an efficient Class for Civil Engineer-
ing."

Each Pupil is provided with a separate Sleeping Apartment. Application for Admission is to be made to the Rev. ARTHUR RICE, College, Chester.

PESTALOZZIAN SCHOOL, WORKSOP.

NOTES.—In this Establishment the Arrangements are of a superior order, and young Gentlemen are carefully educated for the Universities, Competitive Examinations, and for Mercantile Engineering and Agricultural Puruits. Under the care of competent English and Foreign Masters, the Pupils enjoy the advantages of first-rate English and Continental Schools. The course of instruction is very comprehensive. The School is in a most favourable Situation; and for exercise and recreation there are extensive playgrounds and a covered gymnasium. Worksop is famed for its cleanliness and salubrity, and the splendid Parks surrounding have a wide celebrity. The School re-opens on the 8th of August.—For Prospectuses, and further Particulars, apply to J. L. ELLENBERGER.

MATRICULATION, &c.—The Rev. W. KIRKUP, LL.B., St. Thomas's-square, Hackney, PRE- PARES GENTLEMEN for the EXAMINATIONS. A few Boarders can be received.—Apply as above.

CRYSTAL PALACE.

THE GRISI FAREWELL FESTIVAL.

The Directors of the Crystal Palace have the pleasure to announce that they have made arrangements to give

A GRAND MUSICAL FESTIVAL

IN HONOR OF

THE FAREWELL OF MADAME GRISI.

This Festival will take place on WEDNESDAY NEXT, July 31.

It has probably never before fallen to the lot of any candidate for public favour to sustain for twenty-nine successive Seasons the highest and most arduous characters of the Lyric Drama, and certainly never with such unanimous commendations as have been unceasingly bestowed on Madame Grisi.

The Directors are convinced that not only will the higher classes, who have been the most frequent witnesses of Madame Grisi's artistic triumphs, participate in their sentiments on this occasion, but they feel sure that the retirement of that lady will occasion a general feeling of deep regret to all the lovers of music of this country.

In organizing, therefore, this Farewell Festival, arrangements have been made to impart to it the character of a Popular Ovation. The holders of both classes of Season Tickets will be admitted to the Festival without charge, while, at the same time, the price of admission to the public in general is placed at such a moderate sum as will, in all probability, insure an immense assemblage to bid farewell to the great Prima Donna.

The following celebrated Artists will appear on this occasion:

Madame PENCO, Madame DIDIE, Madame TIBERINI;

Signor MARIO,

Signor TIBERINI, Signor RONCONI, Signor GRAZIANI,

M. ZEIGER, Signor TAGLIAFICO,

Signor NERI-BARALDI, M. FAURE, Signor TAMBERLICK,

AND

Madame GRISI,

who will sing some of her most popular Music.

Conductor.—MR. COSTA,

who has most kindly undertaken to conduct on this occasion.

The Orchestra will comprise the entire Band of the Italian Opera, and that of the Crystal Palace Company, the Chorus of the Royal Italian Opera, the additional Chorus engaged in Rossini's 'Guillaume Tell,' with a careful selection of Choral Amateurs from the Sacred Harmonic Society, Exeter Hall, the whole forming an effective Operatic Orchestra of the unusual extent of Three Hundred Performers.

The performance will take place in the Centre Transept on the front portion of the Great Handel Orchestra, which will be so inclosed as to secure the best acoustic effects.

The Programme will comprise the following Choral Pieces:—

MI MANCA LA VOCE, from 'Moise in Egitto'.... Rossini.

LA CARITA..... Rossini.

PRAYER and FINALE, 'Mazzanella'..... Auber.

BENEDICTION of the POIGNARDS, 'Huguenots' Meyerbeer.

THE OVERTURES to 'La Gazza Ladra' and 'Mazzanella.'

Madame Grisi will sing 'Qui la Voce' "Oh mio Fernando" in the Duett from 'Huguenots,' with Signor Mario; and with Madame Didie the Duett, 'Ebben a le ferice,' from 'Semiramide.'

(The entire Programme will be duly announced.)

Prices of Tickets:—

In the desire to fix such a rate as will ensure a large attendance, the Price of Admission is fixed at Half-a-Crown.

Reserved Seats in front of the Orchestra, similar to Blocks C and G at the Handel Festival, will be issued at Five Shillings each. Reserved Seats, unnumbered, around the above Seats, at Half-a-Crown. Stalls in the Corner Galleries Five Shillings each.

The Ticket-offices at the Crystal Palace, at the Box-office of the Royal Italian Opera, the usual Agents of the Company and the Opera, and the Office at No. 2, Exeter Hall, are now supplied with Tickets for sale; and in order to insure Stalls in eligible positions, immediate application is requisite.

Crystal Palace, Wednesday, July 24th, 1861.

ROYAL MANCHESTER INSTITUTION. —AUTUMN EXHIBITION OF MODERN PAINTINGS.

—In consequence of the Exhibition Rooms being required by the British Association in the early part of September, the TIME for RECEIVING PICTURES will be EXTENDED to SEPTEMBER 10th.

CHARING CROSS HOSPITAL, West Strand. —The Council of Management beg respectfully to represent that this Charity has been in useful operation between 40 and 50 Patients, and relieving annually from 3,000 to 3,000 Cases of Acci- dents and dangerous Emergency, besides an unlimited number of Out-Patients.

It is power of doing good is capable of considerable increase by a
very moderate increase of its Funds. Some Wards, expressly pro-
vided for Sick Children, could be brought into active operation
by an addition of between 3000. and 4000. to the Annual Income of
the Hospital; and several Beds now occupied by Children in the
General Ward could thus become available for Adult Patients,
by whom they are greatly needed.

BENEFACTIONS for this important object, and REQUESTS
of Benevolent Persons to the Endowment Fund, for insuring its
permanent maintenance, would be of inestimable benefit, and
recognition would be given to the donors by the Treasurer and Sec-
retary, at the Hospital; and at Messrs. Coutts', Messrs. Drum-
monds' and Messrs. Hoare's, and through all the principal
Bankers.

JOHN ROBERTSON, Hon. Sec.

NOTICE.—TO TOURISTS.—BLACK'S GUIDE-BOOKS and TRAVELLING MAPS, last Editions, will be found to contain all the most recent and useful information for travelling in this country.—London: BARNES & SON, 133, Strand; and sold by all Booksellers.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The objects of the Association are—"To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire, and who are working with different philosophies; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

Reception Room, The Portico, Manchester, July, 1861. The Local Committee of the British Association for the Advancement of Science announce that the MEETING for this year will be held in Manchester, and will commence on Wednesday the 4th of September next, under the Presidency of William Fairbairn, Esq. LL.D. F.R.S. &c.

On this occasion it is fully expected that there will be present many of the Corresponding Members of the Association, and a large number of British members, to all of whom the special inducements offered by the city of Manchester and its populous and industrious neighbourhood are well known. The time appointed for the Meeting has been arranged for the convenience of the British Empire, and well as for the convenience, and as the facilities for arriving in Manchester are now very complete, there is every reason to anticipate a meeting of unusual extent and interest. Both the general and local officers will exert themselves to make the visit of their associates on this occasion agreeable and satisfactory.

The Local Committee are preparing, amongst other arrangements for the entertainment of the Association, besides special lectures on some interesting branches of science and open societies to be held in the Free Trade Hall, the following special exhibitions, viz.:

An exhibition illustrative of the history, progress and achievements of photographic art in its several branches, and photographic apparatus; And a similar exhibition of telegraphic science and apparatus.

A very extensive exhibition of modern microscopes and microscopic objects;

And exhibitions of specially interesting zoological, botanical and geological specimens, chemical products, philosophical apparatus and mechanical models.

Excursions to neighbouring localities of scientific or general interest will be provided for; and

Arrangements made for extensive access to establishments in the neighbourhood, where visitors may have the opportunity of seeing various branches of local industry and practical science in operation.

The Local Secretaries will be glad to be informed as early as may be convenient, of the intention of any visitor to be present at the meeting, and on receiving the necessary (and timely) communication, they will be happy to render such assistance as they can in arranging for visitors any lodging accommodation they may require. The scientific business of the Meeting will be allotted in the under-mentioned Sections. The following gentlemen have undertaken to act as Secretaries of Local Sectional Committees, under the sanction of the Meeting, and are glad to receive communications relating to the business of their several departments:—

SECTION A.—MATHEMATICS AND PHYSICAL SCIENCE. Professor R. B. Clifton, B.A., Owens College, Manchester. Thomas Hecla, Esq., Princess-street, Manchester.

SECTION B.—CHEMICAL SCIENCE. Professor H. E. Roscoe, B.A. Ph.D., Owens College, Manchester. Robert Ramaney, Esq., Ardwick, Manchester.

SECTION C.—GEOLOGY. John Ashkenan, Esq. F.G.S., The Mall, near Warrington. Rev. George Perkins, M.A., Dickinson Road, Beadlam, Manchester.

SECTION D.—ZOOLOGY AND BOTANY. Thomas Alcock, Esq. M.D., Upper Brook-street, Manchester. George Mealey, Esq., St. Peter's-square, Manchester.

SECTION E.—MINERALOGY AND PETROLOGY. William Roberts, Esq. M.D., 166, Oxford-road, Manchester. Thomas Windsor, Esq. M.R.C.S., Piccadilly, Manchester.

SECTION F.—GEOGRAPHY AND ETHNOLOGY. Principal J. G. Greenwood, B.A., Owens College, Manchester.

SECTION G.—ECONOMIC SCIENCE AND STATISTICS. Professor R. C. Christie, M.A., Owens College, Manchester.

SECTION H.—MECHANICAL SCIENCE. John Robinson, Esq., The Atlas Works, Great Bridgewater-street, Manchester.

Communications intended for presentation to the Sections are expected to be forwarded in letters, addressed either to the Assistant General Secretary, at "The Portico," Manchester, or to the Secretary of the Local Sectional Committee, or to the Secretary of the Meeting, and to be accompanied by a statement whether the author will be present, and on what day, so that the business of the Sections may be satisfactorily arranged.

As the objects of the Association are specifically scientific, papers on subjects not so characterized, as on questions of history, biography, literature or art, however interesting, are necessarily inadmissible.

Gentlemen desirous of attending the meeting may make their choice of being proposed as Life members, paying 10s. as a composition, or annual subscribers, paying an admission fee of 12s. (and additional 1s. annually, or associates for the meeting, paying 1s. Ladies may become members on the same terms as gentlemen; and ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1s. Life members receive gratuitously the Reports of the Association which may be published after the date of payment.

Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subsequent without interruption. Associates for the meeting are entitled to the Report of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that application for tickets should be made as early as possible. The names of those who will be supplied in the Reception Room during the meeting; or the names of candidates for admission may be transmitted to the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and arrears of former members, by the Local Treasurer.

New life members will receive the volume of Transactions for this and future years gratis, as will also annual subscribers during the continuance of their subscription.

For information respecting the local arrangements, application may be made by letter addressed to any of the Local Secretaries for the meeting, at The Portico, Manchester.

R. D. DARBISHIRE, 21, Brown-street, Manchester. ALFRED WEILD, Mayfield, Manchester. ARTHUR RAMSOME, St. Peter's-square, Manchester. H. E. ROSCOE, Owens College, Manchester. Local Secretaries for the Meeting.

ENGLISH BOOKSELLING IN CANADA.

MR. DIXON'S NEW WORK.

Just ready, 8vo. 12s.

PERSONAL HISTORY

OF

LORD BACON.

FROM UNPUBLISHED PAPERS.

BY

WILLIAM HEPWORTH DIXON,

Of the Inner Temple.

PUBLIC JUDGMENTS.

PHILADELPHIA ENQUIRER.—"The style of the author is extremely brilliant, pointed and effective. A dramatic interest invests his narrative from beginning to end. The renowned names of English history crowd after each other in quick succession across his pages. Correspondence and documents hitherto unknown or unpublished are contained in almost every chapter, and overflow into an Appendix. The latent motives of famous public acts are laid bare to the quick. In fact, there is scarcely an element of interest or attraction, either of subject or style, possible in a biographical work, which does not exist here."

ATLANTIC MONTHLY.—"Mr. Dixon has added such a mass of incontrovertible facts to the materials which must enter into the future biography of Bacon, that his book cannot fail to exact cordial praise from the most captious critics. To him belongs the credit of rescuing his personal reputation from undeserved ignominy. If we add to this, his vivid pictures of the persons and events of the Elizabethan age, and his bright, sharp and brief way of flashing his convictions and discoveries on the minds of the reader, we indicate merits which will make his volume generally and justly popular."

BAIT'S WEEKLY MESSENGER.—"After carefully reading Mr. Hepworth Dixon's book, we come to the positive conclusion, that he has completely refuted this slanderous assertion, and placed the reputation of Bacon upon a pedestal, from which it is impossible to remove it. Truth will always prevail in the long run, even though it be after many years; and at last, it has vindicated the name and fame of as great a man as England ever produced. Mr. Hepworth Dixon had an arduous task before him; but he has nobly accomplished it, and deserves the best thanks and support of all who love what is good, consistent and true."

LITERARY GAZETTE.—"Francis Bacon, the most illustrious philosopher of our country, is, also, the faithful friend, the high-minded citizen and the just judge. The stories about his ingratitude to Essex, his servility as a statesman, and his corruptness as a judge are all the inventions of malevolence or ignorance; and it has been reserved for the present age, which so abundantly reaps the fruits of his genius, to vindicate, also, the loftiness of his virtue."

MORNING ADVERTISER.—"Our best thanks are due to Mr. Dixon for rehabilitating a glorious reputation, and dispersing the obscuring clouds which obstructed a fair view of the character of the philosopher, statesman, reformer and jurist—Verulam. The faults are trivial when we consider the sterling merits of the book—the extensive and careful research visible throughout—the uniform thorough earnestness of the writer to arrive at the truth wherever a diversity of opinion has prevailed respecting particular points in the history of Bacon—the number and importance of the new facts, often demolishing historical fictions, hitherto universally credited, which have rewarded Mr. Dixon's patient investigation, acute perception and discriminating judgment—his triumphant vindication of the personal character of Bacon—and the enthralling interest which he has succeeded in throwing into his pages,—an interest which commences at the beginning of the book, and only ends when the reader has reached its close."

JOHN MURRAY, Albemarle-street.

MULTÆ TERRICOLIS LINGUÆ, CŒLESTIBUS UNA.
SAMUEL BAGSTER & SONS,
 15, Paternoster-row, London.

GERMAN CLASSICS; with Notes and COMPLETE VOCABULARIES by Dr. FALCK LEBAHN, Author of 'German in One Volume,' &c.

SCHILLER'S WILHELM TELL: a Drama.
 GOETHE'S EGEMONT: a Tragedy.
 GOETHE'S GOETZ von BERLICHINGEN, with the IRON HAND: a Drama.
 LESSING'S EMILIA GALOTTI: a Tragedy.
 KOTZBUE'S PAGENSTREICHE: a Comedy.
 CHAMISSO'S PETER SCHLEIMILCH, the SHADOWLESS MAN: a Tale.
 FOUQUÉ'S UNDIINE: a Tale.

SELECTIONS from the GERMAN POETS.

"These editions are prepared for the use of learners who read without a master; and they will be found convenient for that purpose. In each the text is followed by a glossary, wherein not only the sense of every particular phrase, but also the dictionary meaning of most of the several words, is given in good English. With such aids, a student will find no difficulty in these masterpieces."—*Athenæum*.

Just published, Second Edition, price 2s. 6d.

LEBAHN'S FIRST GERMAN COURSE.

"It is hardly possible to have a simpler or better book for beginners in German."—*Athenæum*.

Fourth Edition, price 3s. 6d.

LEBAHN'S FIRST GERMAN READER.

"Like all Lebahn's works, most thoroughly practical."—*John Bull*.

Sixth Edition, price 2s. 6d.

LEBAHN'S EICHENFELS and DIALOGUES.

"A charming production. The Dialogues are as perfectly adapted to render the student a speaker of this interesting language, as is the Vocabulary for making him a reader."—*Educational Times*.

Third Edition, price 2s. 6d.

LEBAHN'S GERMAN COPY-BOOK:

Being a Series of Exercises in German Penmanship, beautifully engraved on Steel.
 May be had of all Booksellers; and at Dr. LEBAHN'S Class-Rooms, 1, Annet's Crescent, N.

* About Seven Hundred Commendatory Notices of Lebahn's works have appeared.

STANDARD SCHOOL-BOOKS.

OF THE

ENCYCLOPÆDIA BRITANNICA:

A DICTIONARY of ARTS, SCIENCES, and GENERAL LITERATURE.

WITH UPWARDS OF FIVE THOUSAND ILLUSTRATIONS ON WOOD AND STEEL,

And accompanied by a Complete INDEX, in cloth, 8s., or half russet, 12s. 6d.

(From the *TIMES*, February 1, 1861.)

"When we look over the list of contributors, it is impossible to deny the weight of its imposing array of names, which claims to comprise, apparently with good reason, 'the greater number of the individuals most celebrated in scientific, literary and political history, who have adorned the annals of this country for a long series of years.' The very pick and cream of this catalogue occupies several pages. Nor have the contributions of most of them been limited to subjects which other men might have treated as well, but, for the most part, we obtain some of the choicest work of each upon the subjects on which they were the principal authorities. Where Archbishop Whately takes the Rise, Progress and Corruptions of Christianity; Bunsen, the subject of Luther and the German Reformation; McCulloch, Money, Political Economy, and the cognate subjects; Macanlay and De Quincey, their selected Biographies; Donaldson, Philology; Owen, Palæontology; Herschel, the Telescope; Robert Stephenson, Iron Bridges; Basley, Cotton; Fairbairn, Iron Manufacture; and other men, for the most part the work to which they were most competent; the reader may grasp a notion of the grand work of reference which is now placed before him."

Edinburgh: ADAM & CHARLES BLACK.
London: SIMPKIN, MARSHALL & CO.

Price 60s.

BLACK'S GENERAL ATLAS OF THE WORLD.

Strongly and elegantly half bound morocco, gilt leaves, and accompanied by an Index of 65,000 Names.

(From the *TIMES*.)

"This work is one of the most complete of modern publications in this department."

(From the *ECONOMIST*.)

"This is an exceedingly valuable Atlas. We have tested it in two or three instances with the names of places of no considerable mark, and found it faithful."

The publication of this Atlas is continued on the plan of frequent, new, and corrected impressions; thus rendering it a most valuable work of Geographical Reference.

Edinburgh: ADAM & CHARLES BLACK.
London: LONGMAN & Co.; and all Booksellers.

A. & C. BLACK'S EDUCATIONAL WORKS.

Geography and History.

- Black's School Atlas. A Series of 40 Maps 4to. or 8vo. 10s. 6d.
- Black's Beginner's Atlas. A Series of 27 Maps. Oblong 12mo. 3s. 6d.
- Herschel's Physical Geography. Crown 8vo. 7s. 6d.
- Pillans's Classical Geography. 1s. 6d.
- Scott's History of Scotland. 2 vols. 10s.
- Tytler's History of Scotland. 12mo. 3s. 6d.
- Kitto's History of Palestine. 12mo. 3s. 6d.; or with Map, 4s.
- Tytler's Modern History. 12mo. 3s.
- Tytler's Ancient History. 12mo. 3s.

Literature.

- Demaus's Class Book of English Prose. 4s. 6d.; or in two Parts, at 2s. 6d. each.
- Scrymgeour's Class Book of English POETRY. 4s. 6d.; or in two Parts, at 2s. 6d. each.
- Demaus's Introduction to English LITERATURE. 2s.
- Demaus's Young Scholar's Guide. 2s. 6d.
- Buchan's Prose and Poetical Reader. 3s.
- Buchan's Poetical Reader. 1s. 6d.
- Oswald's Etymological Dictionary. 5s.
- Masson's Introduction to French LITERATURE. 2s. 6d.

Arithmetic and Algebra.

- Bryce's Arithmetic of Decimals. 1s. 6d.
- Bryce's Treatise on Algebra. 5s.
- Bryce's Book-keeping. 5s.
- Kelland's Algebra (complete). 7s. 6d.
- Kelland's Elements of Algebra. 4s.

Classical.

- Carson's Exercises in Attic Greek. 4s.
- Carson's Phædrus's Fables, with Index. 2s.
- Gunn's Latin Rudiments. 2s.
- Jacobs and Classen's Latin Reader, by DONALDSON. 3s. 6d. Also to be had in two Parts.
- Schmitz's Elementary Greek Grammar. 2s. 6d.
- Veitch's Irregular Greek Verbs. 6s.

Miscellaneous.

- Bennett's Outlines of Physiology. 6s.
- Porteous's Evidences of Christianity. 1s.
- Herschel's Meteorology. 5s.
- Balfour's Manual of Botany. 12s. 6d.
- Jukes's Manual of Geology. 8s. 6d.
- Mansel's Metaphysics. 7s. 6d.
- Owen's Palæontology. 16s.
- Spalding's Logic. 4s. 6d.

Edinburgh: ADAM & CHARLES BLACK.
London: LONGMAN & Co.

MACMILLAN & CO.

HAVE NOW READY:

EDWIN of DEIRA. By Alexander SMITH. Fcap. 8vo. cloth, 5s.

The GOLDEN TREASURY: a Collection of the Best Songs and Lyrical Poems in the English Language. Selected and arranged, with Notes, by F. T. PALGRAVE, Fellow of Exeter College, Oxford. Dedicated by permission to Alfred Tennyson. 9mo. cloth extra, 4s. 6d.

FOOT-NOTES from the PAGE of NATURE: or, First Forms of Vegetation. By the Rev. HUGH MACMILLAN, Fellow of the Botanical Society of Edinburgh, &c. With numerous illustrations. Fcap. 8vo. cloth, 5s.

PICTURES of OLD ENGLAND. By Dr. R. PAULI. Translated by E. C. OTTE. With Map of London in the Fifteenth Century. Crown 8vo. cloth, 6s. 6d.

The HUMAN HAND and FOOT. By G. M. HUMPHRY, M.D. F.R.S. With numerous illustrations. Fcap. 8vo. cloth, 4s. 6d.

The PLATONIC DIALOGUES, for ENGLISH READERS. By W. WHEWELL, D.D. F.R.S., Master of Trinity College, Cambridge. Vol. III. containing THE REPUBLIC. 7s. 6d.

CREATION IN PLAN AND IN PROGRESS: An Essay on the First Chapter of Genesis. By the Rev. JAMES CHALLIS, M.A. F.R.S. F.R.A.S., Plumian Professor of Astronomy and Experimental Philosophy in the University of Cambridge. Crown 8vo. cloth, 2s. 6d.

NOW PUBLISHING,

TRACTS for PRIESTS and PEOPLE

By VARIOUS WRITERS.

- No. I. RELIGIO LAICI. By Thomas Hughes. Price 1s.
- II. THE MOTE AND THE BEAM: a Clergyman's Lessons from the Present Panic. By the Rev. F. D. MAURICE. Price 1s.
- III. THE ATONEMENT AS A FACT AND AS A THEORY. By the Rev. Francis Garden. Price 1s.
- IV. THE SIGNS OF THE KINGDOM OF HEAVEN: an Appeal to Scripture on the Question of Miracles. By the Rev. John Llewelyn Davies. Price 1s.
- V. ON TERMS OF COMMUNION, contains Two Tracts:—
1. On the Boundaries of the Church. By the Rev. G. E. P.
2. The Message of the Church. By M. Langley, M.A.
- VI. THE SERMON OF THE BISHOP OF OXFORD ON REVELATION, AND THE LAYMAN'S ANSWER:—
1. A Dialogue on Doubt. By J. M. Ludlow.
2. Morality and Divinity. By the Rev. F. D. Maurice. *[In the Press.]*

* Others are in Preparation.

MACMILLAN & Co. London and Cambridge.

MACMILLAN'S

CLASS-BOOKS FOR COLLEGES AND SCHOOLS.

I. ARITHMETIC and ALGEBRA.

ARITHMETIC. For the Use of Schools. By BARNARD SMITH, M.A. New Edition (1861), pp. 248. Answers to all the Questions. Crown 8vo. 4s. 6d.
KEY to the Above. Second Edition, thoroughly revised (1860), pp. 382. Crown 8vo. 2s. 6d.
ARITHMETIC and ALGEBRA in their PRINCIPLES and APPLICATIONS. With numerous Examples, systematically arranged. By BARNARD SMITH, M.A. Seventh Edition (1850), pp. 696. Crown 8vo. 10s. 6d.
EXERCISES in ARITHMETIC. By BARNARD SMITH, M.A. Part I. Pp. 48 (1860). Crown 8vo. 1s. Part II. Pp. 56 (1860). Crown 8vo. 1s. Answers, 6d. The Two Parts bound together, 2s.; or with Answers, 3s. 6d.
ALGEBRA. For the Use of Colleges and Schools. By I. TODHUNTER, M.A. Second Edition (1860), pp. 216. Crown 8vo. 7s. 6d.

II. TRIGONOMETRY.

PLANE TRIGONOMETRY. For Schools and Colleges. By I. TODHUNTER, M.A. Second Edition (1860), pp. 272. Crown 8vo. 5s.
SPHERICAL TRIGONOMETRY. For Colleges and Schools. By I. TODHUNTER, M.A. Pp. 112 (1860). Crown 8vo. 4s. 6d.
PLANE TRIGONOMETRY. With a numerous Collection of Examples. By R. D. BEASLEY, M.A. Pp. 166 (1868). Crown 8vo. 3s. 6d.
PLANE and SPHERICAL TRIGONOMETRY. With the Construction and Use of Tables of Logarithms. By J. C. SNOWBALL, M.A. Ninth Edition. Pp. 240 (1867). Crown 8vo. 7s. 6d.

III. MECHANICS, HYDROSTATICS and OPTICS.

ELEMENTARY TREATISE on MECHANICS. With a Collection of Examples. By S. PARKINSON, B.D. Second Edition (1860), pp. 345. Crown 8vo. 9s. 6d.
ELEMENTARY COURSE of MECHANICS and HYDROSTATICS. By J. C. SNOWBALL, M.A. Fourth Edition, pp. 110 (1861). Crown 8vo. 5s.
ELEMENTARY HYDROSTATICS. With numerous Examples and Solutions. By J. B. PHEAR, M.A. Second Edition, pp. 156 (1867). Crown 8vo. 5s. 6d.
ANALYTICAL STATICS. With numerous Examples. By I. TODHUNTER, M.A. Second Edition, pp. 320 (1860). Crown 8vo. 10s. 6d.
DYNAMICS of a PARTICLE. With numerous Examples. By F. G. TAIT, M.A. and W. J. STEELE, M.A. Pp. 204 (1866). Crown 8vo. 10s. 6d.
A TREATISE on DYNAMICS. By W. P. WILSON, M.A. Pp. 176 (1860). 8vo. 9s. 6d.
DYNAMICS of a SYSTEM of RIGID BODIES. With numerous Examples. By E. J. ROUTH, M.A. Pp. 336 (1860). Crown 8vo. 10s. 6d.
NEWTON'S PRINCIPIA. Sections I., II., III. With Notes and Problems, by P. FROST, M.A. Crown 8vo. 10s. 6d.
A TREATISE on OPTICS. By S. PARKINSON, B.D. Pp. 304 (1869). Crown 8vo. 10s. 6d.

IV. GEOMETRY and CONIC SECTIONS.

GEOMETRICAL TREATISE on CONIC SECTIONS. With a Collection of Examples. By W. H. DREW, M.A. Pp. 121 (1867). 4s. 6d.
PLANE CO-ORDINATE GEOMETRY as applied to the STRAIGHT LINE and the CONIC SECTIONS. By I. TODHUNTER, M.A. Second Edition. Pp. 216 (1869). Crown 8vo. 10s. 6d.
ELEMENTARY TREATISE on CONIC SECTIONS and ALGEBRAIC GEOMETRY. By G. H. PUCKLE, M.A. Second Edition. Pp. 264 (1856). Crown 8vo. 7s. 6d.
EXAMPLES of ANALYTICAL GEOMETRY of THREE DIMENSIONS. With the Results. Collected by I. TODHUNTER, M.A. Pp. 76 (1868). Crown 8vo. 4s.

V. DIFFERENTIAL and INTEGRAL CALCULUS.

THE DIFFERENTIAL CALCULUS. With numerous Examples. By I. TODHUNTER, M.A. Third Edition. Pp. 404 (1860). Crown 8vo. 10s. 6d.
THE INTEGRAL CALCULUS and its APPLICATIONS. With numerous Examples. By I. TODHUNTER, M.A. Pp. 398 (1857). Crown 8vo. 10s. 6d.
DIFFERENTIAL EQUATIONS. By GEORGE BOOLE, D.C.L. Pp. 498 (1860). Crown 8vo. 14s.
THE CALCULUS of FINITE DIFFERENCES. By GEORGE BOOLE, D.C.L. Pp. 248 (1840). Cr. 8vo. 10s. 6d.

VI. APPLIED SCIENCE.

THE ALGEBRAICAL and NUMERICAL THEORY of ERRORS of OBSERVATIONS, and the Combination of Observations. By the Astronomer-Royal, G. B. AIRY, M.A. Pp. 108 (1861). 6s. 6d.

HISTORY of the PROGRESS of the CALCULUS of VARIATIONS during the 19th CENTURY. By I. TODHUNTER, M.A. 8vo. 12s.

The CONSTRUCTION of WROUGHT IRON BRIDGES, embracing the Practical Application of the Principles of Mechanics to Wrought Iron Girder Work. By J. H. LATHAM, M.A., C.E. With numerous Plates. Pp. 289 (1858). 12s.

MATHEMATICAL TRACTS, On the Lunar and Planetary Theories, the Figure of the Earth, Precession and Nutation, the Calculus of Variations, and the Undulatory Theory of Optics. By the Astronomer-Royal, G. B. AIRY, M.A. Fourth Edition (1859), pp. 406. 12s.

A TREATISE on ATTRACTIONS, LAPLACE'S FUNCTIONS, and the FIGURE of the EARTH. By J. H. PRATT, M.A. Second Edition. Crown 8vo. 12s. 6d. (1861). 6s. 6d.

COLLECTION of MATHEMATICAL PROBLEMS and EXAMPLES. With Answers. By H. A. MORGAN, M.A. Pp. 190 (1858). Crown 8vo. 6s. 6d.

SENATE-HOUSE MATHEMATICAL PROBLEMS. With Solutions—

- 1846-51. By FERRERS and JACKSON. 8vo. 15s. 6d.
- 1846-51. (Editors.) By JAMISON. 8vo. 7s. 6d.
- 1854. By WALTON and MACKENZIE. 8vo. 10s. 6d.
- 1857. By CAMPION and WALTON. 8vo. 8s. 6d.
- 1860. By ROUTH and WALTON. Crown 8vo. 7s. 6d.

VII. LATIN.

HELP to LATIN GRAMMAR; or, the Form and Use of Words in Latin. With Progressive Exercises. By JOSIAH WRIGHT, M.A. Pp. 176 (1855). Crown 8vo. 4s. 6d.

The SEVEN KINGS of ROME. A First Latin Reading-Book. By JOSIAH WRIGHT, M.A. Second Edition. Pp. 138 (1857). Fcap. 8vo. 3s.

VOCABULARY and EXERCISES on 'THE SEVEN KINGS.' By JOSIAH WRIGHT, M.A. Pp. 94 (1857). Fcap. 8vo. 2s. 6d.

FIRST LATIN CONSTRUCTING BOOK. By E. THRING, M.A. Pp. 204 (1859). Fcap. 8vo. 2s. 6d.

SALLUST.—CATILINA et JUGURTHA. With English Notes. For Schools. By CHARLES MERIVALE, B.D. Second Edition. Pp. 173 (1858). Fcap. 8vo. 4s. 6d.
CATILINA and JUGURTHA may be had separately, price 2s. 6d. each.

JUVENAL. For Schools. With English Notes and an Index. By JOHN E. MAYOR, M.A. Pp. 464 (1863). Crown 8vo. 10s. 6d.

CICERO'S SECOND PHILIPPIC. With English Notes. By JOHN E. B. MAYOR. Pp. 168 (1861). 5s.

VIII. GREEK.

HELLENICA: a First Greek Reading-Book. Being a History of Greece, taken from Diodorus and Thucydides. By JOSIAH WRIGHT, M.A. Second Edition. Pp. 150 (1857). Fcap. 8vo. 3s. 6d.

DEMOSTHENES on the CROWN. With English Notes. By B. DRAKE, M.A. Second Edition, to which is prefixed ÆSCHINES AGAINST CESIPHON. With English Notes. (1860.) Fcap. 8vo. 5s.

ÆSCHYLUS. THE RUENIDES. With English Notes and Translation. By B. DRAKE, M.A. Pp. 144 (1859). 8vo. 7s. 6d.

ST. PAUL'S EPISTLE to the ROMANS. With Notes. By CHARLES JOHN VAUGHAN, D.D. (1861.) Crown 8vo. 5s.

IX. ENGLISH GRAMMAR.

THE CHILD'S ENGLISH GRAMMAR. By E. THRING, M.A. Demy 18mo. New Edition (1867). 1s.

ELEMENTS of GRAMMAR taught in ENGLISH. By E. THRING, M.A. Third Edition. Pp. 126 (1860). Demy 18mo. 2s.

X. RELIGIOUS.

HISTORY of the CHRISTIAN CHURCH during the MIDDLE AGES. By Archdeacon HARDWICK. Pp. 498 (1858). With Maps. Crown 8vo. cloth, 10s. 6d.

HISTORY of the CHRISTIAN CHURCH during the REFORMATION. By Archdeacon HARDWICK. Pp. 450 (1850). Crown 8vo. cloth, 10s. 6d.

HISTORY of the BOOK of COMMON PRAYER. By FRANCIS PROCTER, M.A. Pp. 464 (1860). Fourth Edition. Crown 8vo. cloth, 10s. 6d.

HISTORY of the CANON of the NEW TESTAMENT during the FIRST FOUR CENTURIES. By BROOK FOSB WESTCOTT, M.A. Pp. 384 (1855). Crown 8vo. cloth, 12s. 6d.

INTRODUCTION to the STUDY of the GOSPELS. By BROOK FOSB WESTCOTT, M.A. (1860). Crown 8vo. cloth, 10s. 6d.

The CHURCH CATECHISM ILLUSTRATED and EXPLAINED. By ARTHUR RAMSAY, M.A. Pp. 204 (1854). 18mo. cloth, 3s. 6d.

NOTES for LECTURES on CONFIRMATION. With Suitable Prayers. By C. J. VAUGHAN, D.D. Third Edition. Pp. 70 (1859). Fcap. 8vo. 1s. 6d.

SAXBY'S NAUTICAL ASTRONOMY.

In post 8vo. with 77 Diagrams, price 5s. cloth.

PROJECTION AND CALCULATION of the SPHERE, for Young Sea Officers; being a complete Introduction into Nautical Astronomy. By S. M. SAXBY, R.N., Principal Instructor of Naval Engineers, H.M. Steam Reserve; late of Calcutta College, Cambridge.

London: Longman, Green, Longman, and Roberts.

SCHOOL HISTORIES BY THE AUTHOR OF 'AMY HERBERT.'

A FIRST HISTORY OF GREECE, from the Siege of Troy, B.C. 1184, to the Destruction of Corinth, A.C. 146. New Edition, fcap. 8vo. 3s. 6d.

MR. BENTLEY'S NEW PUBLICATIONS FOR JULY.

NOW READY.

MEMOIRS of MY OWN TIME. By M. GUIZOT. Containing a Narrative of the Events at the Critical Period of the Eastern Question. Vol. IV. 8vo. 14s.

BIOGRAPHICAL MEMOIRS of MARSHALL HALL, M.D. F.R.S., Corresponding Member of the Institute of France, and Foreign Associate of the Academy of Paris. By HIS WIDOW. 8vo. with a Portrait, 14s.

The LIFE and TIMES of CARDINAL JULIAN, the LAST CRUSADER; including a Narrative of the Religious Movement which originated in the Martyrdom of John Huss and Jerome of Prague. By the Rev. ROBERT CHARLES JENKINS, Rector of Lymington, Kent. 8vo. 14s.

"Truthfully written. The book has solid value, and deserves close attention."—*Examiner*.
"A well-written work. The Author has sketched a good picture of a remarkable man, distinguished by splendid talents and vigorous energy."—*Morning Post*.

POPULAR ANSWERS to "ESSAYS and REVIEWS." Being Lectures delivered in various Places. By the Rev. Dr. CUMMING. Small 8vo. 4s.

NEW VOLUME OF 'BENTLEY'S STANDARD NOVELS,' The SEMI-ATTACHED COUPLE. By the Author of 'The Semi-Detached House.'

NEW WORKS USED IN COLLEGES AND SCHOOLS.

LATIN AND ENGLISH DICTIONARY.

A NEW PHRASEOLOGICAL ENGLISH-LATIN and LATIN-ENGLISH DICTIONARY. By C. D. YONGE. Part I., English-Latin. 9s. 6d. Part II., Latin-English. 7s. 6d. Or the whole work complete in one volume, strongly bound in roan, 15s.

"A very capital book, either for the somewhat advanced pupil, the student who aims at acquiring an idiomatic Latin style, or the adult with a knowledge of the language. It is the best—we were going to say the only really useful—Anglo-Latin Dictionary we ever met with."—*Spectator*.

P. VIRGILII MARONIS BUCOLICA, GEORGICA et ENEIS. With English Notes. By C. D. YONGE. In October. Post 8vo. 9s. 6d. strongly bound.

The FIFTEEN DECISIVE BATTLES of the WORLD, from Marathon to Waterloo. By Sir EDWARD CREASY. Eleventh Edition, with Plans, 8vo. 10s. 6d.

"The decisive features of the battles are well and clearly brought out, the reader's mind is attracted to the world-wide importance of the event, he is considering, while their succession carries him over the whole stream of European history."—*Spectator*.

STAUNTON'S FAMILY & SCHOOL GEOGRAPHY. Small 8vo. strongly bound in roan, 5s.

"Incomparably the best, fullest, most reliable, and admirably arranged among all the works of a similar kind that have ever come under our notice."—*Sun*.

The RISE and PROGRESS of the ENGLISH CONSTITUTION. By Sir EDWARD CREASY. Fifth Edition, post 8vo. 7s. 6d.

"An admirable summary of knowledge, which every well-educated Englishman ought to possess."—*Literary Gazette*.

Price 4s. Eighth Edition, with Nineteen Illustrations,
SERMONS in STONES; or, Scripture Confirmed by Geology. By DOMINICK M'CAUSLAND, LL.D.

DICTIONARY of CHRISTIAN CHURCHES and SECTS, from the Earliest Ages of Christianity. Third Edition, in one handsome volume, 8vo. 12s. By the Rev. J. B. MARSDEN, Incumbent of St. Peter's, Birmingham, Author of 'The History of the Early and Later Puritans,' &c.

"The best book on the subject in our literature."—*Athenæum*.

LECTURES on PHYSICAL GEOGRAPHY; or, Earth and Man. Small 8vo. 2s. 6d. By ARNOLD GUYOT. The only Unabridged Edition.

"We have never seen the science of physical geography explained with greater clearness and elegance."—*Athenæum*.

The ANDROMACHE of EURIPIDES. With Suggestions and Questions at the foot of each page, intended to be read as a first Greek Play. By the Rev. J. EDWARDS, M.A., and the Rev. C. HAWKINS, B.C.L., Ch. Ch. Oxon. Second Edition, post 8vo. 4s. 6d.

London: RICHARD BENTLEY, New Burlington-street.

18, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Narrative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s.

HENRY IV. and MARIE de MEDICI. From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 3 vols. with Portraits, 21s.

"Miss Freer's ability and research have raised her to a conspicuous position among our historical writers. Among the most prominent of her qualities is a rare spirit of moderation and impartiality. Important and eventful as the reign of Henry IV. was, its details are little known by general readers among us, and therefore, in presenting so complete and interesting a narrative, Miss Freer has done good service to the public, besides enhancing her own well-earned reputation."—*Sun*.

A SAUNTER THROUGH THE WEST. END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"The title of this work is unexceptionable: it is happily and appropriately chosen to denote the gossiping contents of the book—light, chatty, and amusing. The author quietly puts his arm in that of his reader, and as he passes on from Hyde-park Corner down Piccadilly or Pall Mall to the Haymarket and Soho, points out the anecdotes connected with each locality. Touches of quiet, genial humour, playful interruptions and amusing stories told in a quaint, unaffected style contribute to the attractive conversational tone adopted, as he saunters along with his friend of the hour. The reader will find himself agreeably carried on from the first to the last page of the 'Saunter' by its cheerful tone and entertaining gossip."—*Literary Gazette*.

JAVA; or, How to Manage a Colony: Showing a Practical Solution of the Questions now affecting British India. By J. W. B. MONEY, Esq. 2 vols. 21s.

NOTHING NEW. By the Author of 'JOHN HALIFAX, GENTLEMAN.' Illustrated by J. E. MILLAR, A.R.S. Forming the New Volume of HURST & BLACKETT'S STANDARD LIBRARY OF CHEAP EDITIONS OF POPULAR MODERN WORKS. 3s. bound.

"'Nothing New' displays all those superior merits which have made 'John Halifax' one of the most popular works of the day."—*Post*.

TEN YEARS' WANDERINGS AMONG the ETHIOPIANS; with Sketches of the Manners and Customs of the Civilized and Uncivilized Tribes from Senegal to Gaboon. By F. J. HUTCHINSON, F.R.G.S., Consul for Fernando Po. 8vo. with Illustrations, 14s.

"Mr. Hutchinson has had rare opportunities of observation. His volume is as interesting as informing. It is rich in practical suggestions."—*Spectator*.

MR. ATKINSON'S TRAVELS in the REGIONS of the AMOOR and the RUSSIAN ACQUISITIONS on the CONFINES of INDIA and CHINA. Dedicated, by permission, to Her Majesty. Second Edition. With 88 Illustrations and Map, 42s. bound.

"Mr. Atkinson's important and interesting work."—*Quarterly Review*.

RECOLLECTIONS of a FOX-HUNTER. By "SCRUTATOR." 1 vol. with Illustrations. "Scrutator's best work. It conveys excellent lessons as to horse and hound; inspiring for the volume an honoured place in every sportsman's library."—*Era*.

A BOOK ABOUT DOCTORS. By J. C. JEAFFRESON, Esq. New, Revised, and Cheaper Edition, in 1 vol. 10s. 6d. bound.

THE NEW NOVELS.

PAUL FOSTER'S DAUGHTER. By DUTTON COOK. 3 vols.

"A good novel. The story is very ingeniously constructed, and the interest is completely sustained throughout. All the characters are vigorously and consistently drawn, and the part sustained by each is natural and appropriate. Lastly, Mr. Cook has been singularly happy in his choice of a heroine. It is long since we have met in a work of fiction with a more charming creation than Sylvia Foster."—*Spectator*.

"Paul Foster's Daughter" is a tale redolent of life and humanity. The interest never flags."—*John Bull*.

A FAMILY HISTORY. By the Author of 'THE QUEEN'S PARDON.' 3 vols.

UNDER THE SPELL. By the Author of 'GRANDMOTHER'S MONKEY,' 'WILDFLOWERS,' &c. 3 vols.

"This is the best story hitherto written by a very pleasant novelist. It is essentially, and throughout, a good story—rapid and rich in incident—that nobody will leave unfinished. It is one of the pleasantest and wholesomest of the novels of the season."—*Examiner*.
"The author of 'Under the Spell' writes well. His plot is excellent, and so worked out that the reader feels to the end interested in the characters brought before him."—*Spectator*.

HOMELESS; or, A Poet's Inner Life. By M. GOLDSCHMIDT, Author of 'JACOB BENDIXEN.' 3 vols.

"There is much that is eloquent and beautiful in this book. The whole aim of the work is elevated and noble."—*Athenæum*.

ALONE in the WORLD. By the Author of 'COUSIN GEOFFREY,' &c. 3 vols. [Just ready.]

APPROVED SCHOOL BOOKS.

Turrell's French Phraseology. 5th Edition.

A Thousand Oral Exercises in French Phraseology, Idioms and Synonymy. Designed as a Vocabulary or Phrase-book for those who have already made some progress in the Language. By H. S. TURRELL, M.A. Ph.D. An Enlarged Edition (the 5th), price 4s.

Specimen Exercise.

TO CALL.—1. Appeler. 2. Nommer. 3. Passer. 4. Traiter de. 5. S'arrêter.

1. Have the goodness to call the servant. 1. Ayez la bonté d'appeler les domestiques.
2. What do they call that in French? 2. Comment est-ce qu'on nomme cela en Français?
3. I will call at the bookseller's on my way. 3. Je passerai chez le libraire en allant.
4. He called me a thief. 4. Il m'a traité de voleur.
5. Does the stage-coach call at this inn? 5. Est-ce que la diligence s'arrête à cette auberge?

"A very useful book."—*Athenæum*.
"A very superior book, both in design and execution."—*Educational Record of the British and Foreign School Society*.

Also, by Dr. TURRELL, 3rd Edition, enlarged, price 5s.
Leçons Françaises de Littérature et de Morale, en Prose et en Vers;

On, Nouveau Recueil de Morceaux, Extraits des Meilleurs Auteurs.
This Edition contains a New Chapter, 'Poésie Dramatique,' consisting of Selections from the Works of Racine, Corneille, and Molière.

LONDON, SATURDAY, JULY 27, 1861.

LITERATURE

Recollections of A. N. Welby Pugin and his Father, Augustus Pugin; with Notices of their Works. By Benjamin Ferrey, Architect. With an Appendix by E. Sheridan Purcell, Esq. (Stanford.)

MUCH more might have been made by a skilled biographer of the life of a headstrong, eccentric, devout man of genius, than is accomplished in this volume. The subject, let it be owned, is full of difficulty in more ways than one. Mr. Ferrey avoids the first of these in a manner scarcely allowable in an architect.—He escapes from criticizing the buildings reared by so Gothic and uncompromising a theorist as the Author of 'Contrasts.' Generally having asserted that Pugin ranks "among the most eminent architects" of the present or former days, he does not dwell on one single proof of supremacy in stone or brick, such as Wren and Jones have left behind them in adornment of England. True, Wren and Jones were "basely" Palladian, and as such their works, ecclesiastical and secular, are, of course, beneath contempt for those with whom there is one only style.—Thus, it may be that Pugin's attempts, incomplete as they were (his church at Cheddle making, perhaps, the exception), would pass with his congregation as worthier than the most perfect specimen belonging to another school of religious architecture. We ought, however, after so sweeping an assertion as the one cited to have had the matter better reasoned out by Mr. Ferrey. Instead of this, we have merely a list of Pugin's principal edifices. On none of these has Mr. Ferrey indulged in criticism; whether they be Lombard, or Norman, or Byzantine, or Early English, or Florid, cannot be learnt from his book. But this is not all. Pugin's biographer, not commanding appreciation of character or decision of hand, has evaded due consideration of the passionate and uncompromising sectarianism of his hero. That a convert to Roman Catholicism is not an easy character to handle in these times we know well; but Pugin's change of opinion was the keynote of his life—a fact too boldly avowed, too vehemently tincturing every thought, word and work of his, not to claim minute examination;—the more inasmuch as it may have been explained, in part, by singularities of character which took the last culminating form of mental disease. With this complex but interesting matter, Mr. Ferrey, being a Protestant, seems unable to cope—and has handed it over to Mr. Purcell,—who, belonging to the Roman Catholic faith, sweetly burns incense, and smoothly invokes high names and infallible dogmas at the grave of the strange, sincere man of whom we would know more. Where we desire discriminating analysis of character, we are put off with panegyrics—and are compelled to piece out for ourselves some figure, intellectual and imaginative, of one who was a strenuous and honourable artist, though a thoroughly singular one.

Pugin's father, born in France—the year 1762—and belonging, we are told, to a family of pedigree and distinction—fled from the horrors of the Revolution of 1792 to this country, —and was employed by Nash, into whose office he entered, as a draughtsman. He seems to have had little in common with his son as regards character, but he was energetic, vigorous and bold with his pencil, and was appreciated as such by his ingenious and too much-despised employer,—for Nash had genius as an architect, though it was dwarfed by that won-

derful patron of Art, "the first gentleman of Europe," and though he was compelled (as mediæval architects have since been) to build cheaply.—It was the rage then (the rage having been kindled by Horace Walpole in his lath-and-plaster prophecies at "Strawberry Hill") to build great modern noble houses after the humour of old castles; but the humour was to be in the Windsor Wyattville style—and Pugin the elder had "to get up" the style bespoken for Nash. That he himself was a man of tastes and fancies, the following characteristic bit will show:—

"Remembering that a drawing-master to his father's family in France was now living somewhere in London, he made a search and discovered him. This person was Merigot, the aqua-tint engraver: under this artist Pugin made great progress in his art. He often related the many difficulties experienced at this early period of his residence in England, owing to his imperfect pronunciation of the few words of English which he had learnt. Pugin, according to the fashion of that day, wore a three-cornered hat, carried his muff and gold-headed cane, and made frequent applications at the post-office for letters. To his repeated inquiries, he constantly received the same petulant answer, 'I tell you there are no letters for Monsieur Augustus Pugin, but plenty for Monsieur Puggen.' The mention of this incident to his friend Mathews in after times, induced that clever comedian to found upon it the well-known character of Monsieur Malet, which he personated with so much feeling. 'Ah!' Pugin would often say, 'people little know that Monsieur Malet should be Monsieur Pugin.'"

The elder Pugin's gifts and graces won for him, while he was making Islington drawings, the hand of Catherine Welby—a lady, belonging to a Lincolnshire family of substance, and a beauty who was toasted as the "Belle of Islington."—He rose to easy circumstances. Two or three anecdotes of himself and Nash are worth preservation:—the first, a bit of royal courtesy on the occasion of Pugin's making Pavilion drawings (for that hideous Oriental Folly) at Brighton:—

"He was engaged in one of the galleries of the Pavilion colouring a view. Deeply intent upon his drawing, he did not observe that some one had entered the apartment, but on looking round, to his surprise, saw the King, who was then advancing to the spot where he was sitting. Pugin had scarcely time to rise when the King, passing by him and not perceiving a stool on which a colour-box was placed, accidentally overthrew it. The King stooped, and instantly picking up the box, gave it to Pugin with an expression of apology."

Again:—

"In order to animate his pupils to perseverance and industry, Pugin frequently set before them the example of Mr. Nash's early career, who when a pupil in Sir Robert Taylor's office had an early opportunity of bringing himself into notice. Sir Robert, on one occasion, putting before his clerks some plans to which certain alterations were needed in an unusually short space of time, was annoyed at being told that it was impossible to do what he required. This being overheard by young Nash, he ventured to ask if he might undertake the task which had been declined by his superiors. Sir Robert, struck by the earnest manner of the boy, granted his request. Nash immediately went to his room, procured paper and candles, and, sitting up all night, laboured incessantly at the drawings, and by the time appointed appeared before Sir Robert with the plans completed. * * As another illustration of Nash's perseverance in after life, and his determination never to be overcome by seeming difficulties, it is told that on one occasion, having to go to some out-of-the-way place in Wales, he disdained the accustomed road, which was circuitous, and resolved to seek a more direct path to his object. Setting out on foot he encountered many hedges, ditches, and fences,

most of which he passed, though not without difficulty. At last, meeting with a locked gate, awkwardly framed and inconvenient to mount, he was seen to retrace his steps several hundred yards, make a sudden run, and attempt to vault over the gate. Failing in this, again and again he put forth his strength, and nearly accomplished his aim; at last, stripping himself of his coat and waistcoat, by a longer run and a desperate spring he succeeded in clearing the barrier. He was then seen to climb deliberately over the gate, retrace his course, put on his clothes, and proceed quietly on his way."

Thus much (episodically) in favour of master and man, both unduly, perhaps, derided. To return to our subject—if Pugin the elder was a genial, pleasant artist, his wife was as sharp and stern as a clever woman and a *belle* of Islington can be, when she keeps the house of a man who "takes pupils":—

"Mrs. Pugin usually retired to rest at nine o'clock, and rose in the morning at four; she therefore thought it salutary that the pupils should commence their studies at six o'clock in winter as well as in summer; indeed, from the moment the mistress of the house awoke no one was ever permitted to get any rest. First came the loud ringing of the bell to rouse the maids, then in quick succession the bell to summon the pupils from their beds, and the final peal requiring their presence in the office by six o'clock. * * At half-past eight they were summoned to breakfast, and on entering the room Madame was seen already seated at the head of the table: on approaching it each youth made a profound bow, the neglect of which would quickly have been visited with reproof. A short prayer was then said, and breakfast despatched in constrained silence, after which each retired as he entered, making the same obeisance to the head of the table. During dinner the like silent system was enforced, similar obsequious respect paid, and then retiring, the pupils continued to work incessantly at the desk till eight o'clock. The only leisure afforded them was from that hour till ten, when they retired to rest."

Mrs. Pugin was a pamphleteer, too; and wrote in that capacity about Lord Melville's troubles:—a woman clearly not to be trifled with. Her son, *our* Pugin, was born in 1812—delicate while an infant, and, it may be presumed, severely handled (for his good, so runs the maternal excuse) by his mother.—He very early displayed great talent for draughtmanship, but as great personal slovenliness; in this how unlike his father, as described above!—He showed as soon those propensities for odd investigation which indicate character and point the direction of genius. He wanted to know more concerning old English castles than the superficial folk of the Wyattville school:—

"It was in the month of July, 1826, that he set out for Rochester, accompanied by the writer of these pages, then an articulated pupil with his father. * * He stayed at Rochester some days, taking sketches of every part of the Castle, and measuring carefully its several apartments; he then prepared accurate drawings, showing it in a state of complete restoration. At that time little was known concerning the foundations of these enormous structures; Pugin therefore determined to make excavations, and by forming huge trenches at the base of the walls, he ascertained the mode of their construction, which proved to be of a solidity and depth fully in keeping with the superincumbent masonry. There are always amusing traditions connected with these old buildings, and, amongst others belonging to this Castle, it was supposed that treasures or plate might in emergency have been thrown down the well constructed in the inner wall of the Keep. The bare reference to this as a probability only was sufficient, and Pugin at once resolved to make a careful search. He immediately obtained the necessary apparatus, and having hired men to descend the well, fearlessly placed himself in the bucket to be lowered by the windlass, so that he might direct the opera-

tions at the bottom. It had been previously ascertained that the well was considerably choked up by quantities of rubbish; and in the removal of this accumulation very little was discovered, his zeal being only rewarded by the acquisition of a few pieces of pottery and glass of Queen Elizabeth's period."

It appears that young Pugin's parents were proud of his genius and aware of its peculiar bent. His mother trained him oddly.—On week days, she excited his imagination by telling him marvellous narratives; on Sundays, when his heart was in Westminster Abbey, she compelled him to take part in what Chalmers called "the exhausting services" of Edward Irving's Kirk in Hatton Garden. The youth did not feel the poetry of that singular man's orations; and to his hatred of "the cold and sterile forms of the Scotch Church" may be, perhaps, ascribed the recoil, which drove him into the excesses of a zealous Papistry.

Meanwhile, he was becoming known as a designer; was employed to make drawings for plate by Rundell & Bridge, and, under Wyattville, devised the furniture for the renovated apartments at Windsor Castle, and for the corridor,—in which the last-named artist outwitted the King:—

"When Sir Jeffrey was about to begin the erection of the corridor or long gallery on the south and east sides of the court of the upper ward, about five hundred feet in length, in order to form a handsome feature in the interior, as well as a commodious access to all the private apartments on the principal story, he proposed that it should be fifteen feet wide, but the King would not listen to its being made more than ten feet for fear of spoiling the effect of the court. As soon as the parapet was finished the King came to see it, and was so surprised at finding, that instead of injuring, the corridor actually added greatly to the effect of the court, that he expressed to Wyattville his regret that he did not allow him to make it fifteen feet wide instead of ten; on which Wyattville replied that he had presumed to anticipate his Majesty's feeling on the subject, and had actually built it fifteen feet wide."

The above anecdote has had more than one locality in Windsor Castle—probably Mr. Ferrey has nailed it in its right place.

In 1831, the young architect was chasing other game. His severe Calvinistic mother had hindered her son from entering any theatre till he was fifteen years of age; but while young Pugin was at Windsor he made acquaintance with a scene-shifter belonging to Covent Garden Theatre,—got, by his aid, into that charmed world, and for awhile indulged his decorative fancies by devising scenes and machinery. Many recollect the *ballet* (Mr. Ferrey calls it "*opera*") of 'Kenilworth,' produced in the Haymarket in 1831. The scenery, in that day thought marvellous, was contrived and collected by the late architect of St. Augustine's, Ramsgate.

"So completely did the mania for theatrical representations enthrall him that he was for ever making experiments in order to produce startling and novel mechanical changes, and he made himself acquainted with all that had been written and published on the subject; but little was to be obtained either from the designs of Peruzzi or any more modern artist. The only man in comparatively recent times who devoted attention to the subject was Inigo Jones, who displayed great fancy and talent not merely as a scene-painter, but in producing pageants and masques, and planning the decorations and machinery for them. Perhaps Pugin might claim to have done as much in his way for producing correct representations of the pageants of the middle ages. With a view to help him in this pursuit his parents allowed him to convert the upper floor of their house in Great Russell Street into a model theatre. This he did at much expense, removing the attic ceiling, cutting away

the roof, constructing cisterns, and adapting everything necessary to his object. On this model stage he designed the most exquisite scenery, with fountains, tricks, traps, drop-scenes, wings, soffites, hilly scenes, flats, open flats, and every magic change of which stage mechanism is capable. Large parties were invited to witness his performances, and probably a more skilfully made model theatre had never been seen. It was not a toy in any sense of the word, but a piece of construction sufficiently large to enable Pugin to exhibit experiments and study compositions before they were adopted on the actual stage. The intricacy of the mechanism was surprising, but every part was so admirably adjusted that the changes in the scenes, wings and sky-pieces were effected with marvellous rapidity, for it was provided with lines, pulleys, grooves, balance weights, machines for ascents and descents, &c."

How Mrs. Pugin digested the theatre, in the third story of her orderly house, is not told. There were more "wild oats" for young Welby to sow, in the form of eccentric enterprises. He took a passion for the sea,—and, beginning with a boat, he rose to a smack,—thence to a schooner, which he commanded,—sailing to and fro betwixt England and the Continent; and not merely bringing home such congenial spoils as antiquities and carvings from the Low Countries, but turning a thrifty penny in the egg-trade.—This outbreak may have confirmed him in that carelessness as to personal appearance, which had already so distressed his courtly father and his Calvinistic mother. The whim, however, did not last very long, as a distraction from main objects.—He next established himself as a master-carver of Gothic ornaments on an extensive scale; but the speculation would have landed him in bankruptcy had not an aunt stepped in. From this time forward he went on more steadily and successfully, but always strangely. In 1835 he became the proprietor of a bit of ground near Salisbury,—built a deformity upon it, calling itself a house, "with a great absence of modern comforts in the interior arrangement,"—christened the thing "St. Marie's Grange," and filled it with mediæval curiosities. The building, which cost 2,000*l.*, was sold by auction in 1841 for 500*l.*:—

"Pugin had never thought, when erecting it according to his own fancy, (the rooms communicating without any common passage,) that the house would be unsuited to other people's requirements in the event of his wishing to sell it. To build a house according to Pugin's early notions was no easy matter, so many modern usages had to be given up; and several humorous disputes arose with the builder during its progress. He would have enormously thick walls and deep splays to the windows, strong oak bars for fastenings, and not a scrap of plaster or battening where such materials were usually put. There was attached to the house a small oratory, with a window opening to his bed-room, so that in case of illness he might participate in the service going on at the altar; he also spoke of providing an endowment for a Priest to celebrate the services, but he never carried his intention into effect, probably seeing the impossibility of retaining St. Marie's Grange as his fixed residence."

From this quaint home (which some might designate as a piece of mediæval cockneyism, were it permitted to speak evil of any work done with such saintly pretence), Pugin sallied forth on excursions among our cathedrals,—breaking out, moreover, as his letters show, into just, but intemperate, denunciations against the English cathedral restorers—call them rather the spoilers—of the last century.

Shortly after this time Welby Pugin was married,—had become a Roman Catholic, as enthusiastic as the scene-painter and sea-trader in carvings and eggs had been,—had fairly set himself before the world by the pub-

lication of his 'Contrasts,' and gained "an immense deal of business." His conversion and his book (taking together its good and its evil,—its high views and its outrageous paradoxes, its veneration and its vituperation),—could not fail to bring him forward. But Pugin had another engine of notoriety—played by him, we believe, unconsciously—not to gain notoriety. He was slovenly in his dress, as matter of principle; the architect appeared among his clients, gentle and simple, in "a sailor's jacket, loose pilot-trousers, jack-boots and a wide-awake hat."—This was the man who, when contemplating a later marriage for himself, bestowed time and pains, not merely on "orphreys" for the solemnizing priests, who were to make the show gorgeous—not merely on illuminating nuptial-cards—but on designing the jewelry which his wife was to wear. His "utter contempt for effeminacy and dandyism" did not include church millinery. The rudeness of such disclaim of accepted customs is a sure hold on curiosity and esteem. Abernethy filled his ante-rooms by his brutal speeches to women,—leaders of fashion there have been whose disregard of every courtesy of life would have been rebuked by the considerate behaviour of their kitchen-maids.—People are over-awed and attracted by what is queer, dirty, rough and ill-bred—let it be only bold enough. "There must," so runs the popular fallacy, "be something beneath it."—In connexion with this argument, an anecdote or two may be given, as illustrating character in its inconsistency:—

"To the ladies of his acquaintance Pugin's carelessness in appearance was very distasteful: but when remonstrated with on the subject, he never condescended to give a patient hearing, but cut the matter short by saying: 'It's all very well, my dress will do perfectly.' A friend with whom he was at one time staying, after thus expostulating, retorted, with some amount of warmth, 'It is not all very well,' and thought that her remarks had made some impression; and true it was, for on the following morning he presented himself in a smart blue coat with gilt buttons, and a buff waistcoat, exclaiming, 'Well, are you satisfied now?' * * Lord R—r once calling at St. Marie's Grange during its erection, and desiring to make his acquaintance, asked if he would dine with him, to which Pugin assented. 'Very well, then,' said his Lordship, 'I'll expect you to-morrow at six o'clock.' Thither at the time Pugin repaired, and as he was admiring the stately rooms and objects of art and *virtù* with which they were enriched, his Lordship, who was well known for his simple habits and encouragement of agricultural pursuits, observed, with perhaps generous feeling, that he would as soon live in one of the smallest cottages on his estate as in his large and magnificent mansion. Upon this, Pugin, jumping up and pacing the room in apparent excitement, exclaimed, 'The d—l you would—the d—l you would, my Lord; then what is to become of me and all other artists!'"

The question of Pugin's conversion is one not to be opened here with the slightest reference to his sincerity. That neither judgment nor justice had any deciding share in his proceeding may be inferred from every line of this curious record of his curious life. He did not leave Protestantism only—he hated it actively thenceforth and for evermore;—"put everything connected with it" (says Mr. Ferrey, speaking of 'Contrasts') "in a bad light." In fact, having given himself up, body and soul, to Tradition, he fought for his chosen idol as if the same were Eternal Truth;—forgetting that there was a day when—as regards his own art and its history—Christian worshippers had no church-plate, priests no cloth of silver to wear and no cloth of gold; and when yet there were among them such things as devout prayer and unselfish sacrifice,—days when such Chris-

tian Art as the world then possessed did its best with such materials as it could grasp or inherit from effete Paganism,—forgetting such evidences as the sight of *Charon's* boat in a mosaic,—as the Greek capitals in Santa Fosca's church at Torcello,—both among the most ancient and impressive Christian temples standing. The pedantry with which persons such as Pugin implicitly and inconsistently manacle their imaginations is a characteristic of the class, almost as remarkable as the real enthusiasm by which they delude themselves, and by which, accordingly, they sway others.—When need was, Pugin could acquiesce in the miserable conditions of cheapness and parsimony as conveniently as any of the false or venal race of Protestant architects. He could build up his own "St. Marie's Grange" so as to abide a battering-ram; but he also could build his Gothic Cathedral in Lambeth with little more substance than could be given to a low, long, thin-walled Gothic band-box, pierced with huge and feeble windows! It is worth while hearing his own confessions on the subject:—

"I believe, as regards architecture, few men have been so unfortunate as myself. I have passed my life in thinking of fine things, studying fine things, designing fine things, and realising very poor ones. I have never had the chance of producing a single fine ecclesiastical building, except my own church, where I am both paymaster and architect; but everything else, either for want of adequate funds, from injudicious interference and control, or some other contingency, is more or less a failure. . . . St. George's was spoilt by the very instructions laid down by the committee, that it was to hold three thousand people on the floor at a limited price; in consequence height, proportion, everything was sacrificed to meet these conditions. Nottingham was spoilt by the style being restricted to lancet—a period well suited to a Cistercian abbey in a secluded vale, but very unsuitable for the centre of a crowded town. . . . Kirkham was spoilt through several hundred pounds being reduced on the original estimate. To effect this, which was a great sum in proportion to the entire cost, the area of the church was contracted, the walls lowered, tower and spire reduced, the thickness of walls diminished, and stone arches omitted."

What has been said touches no question of Churches—but that of balanced, earnest, self-consistent character, principle, and effort—lacking which, the brightest man of genius, the most showy declaimer, the most eager exponent of abuses scarce worth perceiving, whatsoever his creed be,—is only an incomplete man.

Here, further to illustrate character, is a letter, droll in its frantic exaggeration: one which might have been written by *Boythorn*, in Mr. Dickens's 'Bleak House,' not by a contemporary mediæval architect. The "devotion" to and faith in "the great Papist Earl,"—contrast (to use Pugin's words) with the "gross villany" and the "horrid ruffian":—

"London, Tuesday, in the Octave of the Assumption.
"My dear Lord Shrewsbury,—I arrived home quite safe last week after experiencing most miserable weather. I encountered one gale of wind between Rotterdam and Antwerp which was awful, and to make the matters worse I was in a wretched steam-boat that I found after I was on board had been condemned, and after the week was to be replaced by a fine new vessel. We had both pumps going, and the vessel strained as if she would go to pieces. I was very thankful to get safe ashore. Immediately on leaving your Lordship, I was the victim of the grossest piece of villany that I think was ever perpetrated in broad daylight in a Christian country. I sat in the *coupe*, and immediately before me was a black, ferocious-looking rascal in a conical hat, moustaches and beard, a compound of both Infidel and Republican. He brought an enormous pipe, at least three feet long; this he laid on the seat unperceived by me.

After a short drive the postillion said everybody must dismount, as there was a dangerous bridge to pass. It was impossible to get out of the *coupe* without pushing up the seat. The fellow had left his pipe behind the cushion, and of course down it went and broke the bowl. On this he attacked me most furiously, and declared I should pay 25 francs!! for his pipe, not worth 30 sous. And if it had been worth 500 francs, he placed it in a position where it was impossible even to perceive it. I refused, and remonstrated, and this went on till we got to the place where we join the high road to Liege; he was going to Aix. As soon as I got out of the coach he rushed on me and declared he would have the satisfaction of a man of honour, or 25 francs. He drew a knife and desired me to defend myself; this, of course, I refused to do, for I had no idea of fighting. He then swore that if I did not instantly pay 25 francs, I should not leave the place alive. Not a soul came to help. The other passengers, who saw the whole injustice of the business, left me to this horrid ruffian; I had no alternative but to pay. What could I do! My diligence was waiting; he was going to Aix, I to Liege; I had not even time to seek redress. The furious ruffian would have stuck me at any rate; but I never paid 25 francs with such bad grace; and yet what other chance had I to free myself from this beast! Whenever I see a man with a conical hat, a beard and a pipe, I shall avoid him most carefully. . . . With kindest respects to her Ladyship, believe me, my dear Lord Shrewsbury, with great respect, your most devoted and faithful servant,
A. W. PUGIN."

We must continue in a fragmentary fashion:—

"Upon quitting Salisbury in 1841, Pugin came to London, and took up his residence at Cheyne Walk, Chelsea. Here he resided some time, but he had previously purchased ground at the West Cliff, Ramsgate, and commenced building a house upon a much larger scale than the one he sold near Salisbury. He also began to build there a church at his own expense. This building, which occupied some years in construction, was advanced from time to time as he could spare the means from his yearly income. His desire was to build it in the most correct and solid manner, and in this he was successful. The church, as it now stands, consists of a nave, chancel, centre tower, south aisles and transept. Everything about it is truthful. The exterior is faced with flint banded with courses of stone; the oak roofs are covered with ornamental Staffordshire tiles, the walls with ashlar; the Chancel and Lady Chapel ceilings are panelled and emblazoned; the floors laid with beautiful encaustic tiles; the altars and tabernacle are elegantly designed and executed in costly materials, the latter being entirely lined with plates of silver gilt, and the rood screen and stalls richly carved in oak. The font and cover are of unusual beauty. The painted glass by Hardman is excellent. Many of the fittings are yet wanting, the church not having been completed before his death, and for the present there are only temporary seats and screens, without pretensions; but his family and friends purpose to complete these accessories in a manner worthy of the rest of the work. While he was at Chelsea he found opportunities of running down to Ramsgate to advance these private works of his own. * * He had now another trial soon to undergo; his wife, to whom he had been married ten years, was attacked by a severe illness, and died in August, 1844. Thus in the short space of about twelve years he had become twice a widower. * * At Ramsgate he appears to have led the life of almost monastic regularity. His constant practice was to be in his private chapel at six o'clock; and as sure as the church bell tolled the Angelus, so sure might be heard the withdrawal of four heavy external bolts which fastened the door of the chapel."

A third matrimonial scheme presented itself to Pugin:—

"It was at Alton Towers that he first met Miss Amherst, niece of Lord Shrewsbury, and was soon captivated by her fascinating manners and her evident admiration of his talents and conversation.

A proposal of marriage followed, but many obstacles were interposed to prevent the union. The disappointment was a heavy blow to him. On the advice of the parents, Miss Amherst broke off the engagement and afterwards retired to a convent."

Later came a fourth, with a lady who appears to have played "fast and loose," to have lured her lover on—to have undertaken for her own conversion,—to have beguiled him into the costly fopperies in bridal preparation, of which mention has been made, and, at the last hour, to have shrunk back, on the investigation of her family. Mr. Ferrey recalls these details, apparently forgetful that persons may still be living whom they may wound. But Pugin was more ready and immediate still than his biographer: on his disappointment he printed a 'Statement of Facts.' This production is a singular one, emphatically setting forth the mind and habits of a man, who conceived himself chartered "to have or to leave"—but not "to bear and forbear." Those who love trials for "Breach of Promise," will read the pages here reprinted with zest. The lady took fright, and, urged by family importunity and by some misgivings, not wholly unnatural, acted discreetly in renouncing her suitor. A year or two later, he made his third marriage, which resulted (we are told) in entire happiness. The fac-simile of the dandy mediæval card (already referred to) and Lord Shrewsbury's answer, are paraded in this book, gay as gold, vermillion and green can make them.—Mr. Ferrey goes on to assure us "the Duke of Norfolk and other distinguished people also wrote to him, expressing their pleasure at his marriage." This was in 1848. Four years later, Pugin's mind, to our apprehension never balanced, gave way, and the body died. It is said, that he reaped small fortune from the exercise of his genius:—it seems here to be admitted that the patrons who most profited by the unreasoning enthusiasm of a neophyte passed on one side in cold astonishment when they learned that he whom they had believed in was lying low, stricken by the brain distemper, which sane readers will see was prefigured from his youth upwards. The last hours of Pugin's life were indeed, painful,—if they be looked on from this point of view. Wasted power, self-delusion and ingratitude,—what can be sadder than such a story as is made up of the three in combination? This book, however, is written—atoningly—to excite sympathy in the foundation of some memorial which shall represent his merits.

The merits of Pugin we hold to have been real. If he was wild, he was honest. He had the true artist-sense,—the true artist-eye,—the true artist-hand,—the true artist-heart. But mental distemper may have set in with him at an early age;—and such fact may offer the key to much that is violent and without coherence in his career. By his buildings we cannot imagine that Posterity will set great store—Mediæval though they be.

In the Track of the Garibaldians through Italy and Sicily. By Algernon Sidney Bicknell. (Manwaring.)

THE dust of departed and the fame of living heroes are alike put to base uses. Dead Cæsar stops a hole, and triumphant Garibaldi is made to garnish newspaper advertisements, discharge the mean offices of a publisher's canvasser, and find readers for gentlemen who, scarcely able to compose a grammatical sentence, wish to gratify their vanity by figuring as "authors." Mr. Algernon Sidney Bicknell is no vulgar writer. Of this he is at pains to assure his reader in a Preface, anxiously protesting against any misconception being put

on his literary labours. "He did not go abroad as a professed or *intending* book-maker." Such being the case, freed from the obscurity of an inelegant and indefensible construction, it is only to be regretted that Mr. Algernon Sidney Bicknell did not return from foreign lands in the same comparatively healthy state of mind, for his appearance as "a *professed* book-maker" will bring neither amusement to his readers nor credit to himself. Let our author speak for himself; that his quality may be fairly estimated, he shall reap the benefit of having his first chapter reprinted in our columns, without mutilation or addition.—

"Who is your undertaker?"—"Oh! I'm a 'Necropolis' man: '12s., delivered; and private waiting-room for afflicted relatives.'"—"Then you're not going alone to Garibaldi's camp in this blessed month of September, 1860."—"Why not?"—"You'll get potted by the Neapolitans, to a certainty; and do the company by dying out of their jurisdiction." A friend, who met me accidentally at the London Bridge Station, asked me the above questions, as the Folkestone express was about to start; and having already taken my seat, I answered them through the carriage window. "Good-bye, old fellow!" he added cheerfully, when the train began to move. And then, in a sadder tone, wringing my hand, he parted from me saying, "Well, I hope you'll come back safely." Was it then so very absurd to be going to the scene of war, and should I really get 'potted,' as he said? I did not think so. In my pocket I have a ticket for Paris, and there I mean to buy another for Marseilles. My luggage is an old portmanteau, not worth stealing, an umbrella, and a stick. "No arms!" says gruff naval swell in corner. "No bag?" says commercial traveller at my side. "No flask and sandwich case?" says blushing young lady opposite. "Oh! dear, you'll be so hungry!" Pity me, reader,—I had none of these necessities; but I took one thing more, the impress on mind—not lips—of the last speaker's pretty face. Would you hear more, inquisitive one!—since then I have often dined where I can see it."

What an exquisite combination of humour and pathos in the entire chapter! What a stirring conflict of wit in the opening conversation! It is difficult to say which of the speakers plays the more brilliant part. Mr. Bicknell, who terms himself a "Necropolis" man, and a "12s. delivered" man; or Mr. Bicknell's friend, who jauntily inquires "Who is your undertaker?"—calls September a "blessed month" and fears the author will "get potted by the Neapolitans." If we are inclined to think that the friend's pleasantry about "doing the company by dying out of their jurisdiction" entitles him to be regarded as the better man, we are led to a different decision by reflecting on the debt of gratitude we owe to Mr. Bicknell's memory, good taste, and felicitous powers of narration for presenting us with an adequate record of so remarkable an interview. "Was it then so very absurd to be going to the scene of war, and should I really get 'potted,' as he said? I did not think so. In my pocket I have a ticket for Paris." This unexpected transition from the past to the present tense is, doubtless, had recourse to by Mr. Bicknell for sake of bringing the facts of remote history vividly before the reader's mind; but it has this advantage, that, until the object of the trick is seen, it conveys the impression that the author is describing himself in the midst of his literary labours, provided with a ticket for Paris in one pocket, harbouring an intention of purchasing another pass for Marseilles, and surrounded by an old portmanteau, not worth stealing, an umbrella and a stick. Indeed, it is not till the reader remembers that a railway-ticket, a portmanteau, not worth stealing, an umbrella and a walking-stick could not lighten the tail of an "intending bookmaker," that

he masters the secret of his own position and the author's aim. That discovery made, the text, as far as tense is concerned, flows on harmoniously. "No arms!" says the "naval swell in the corner." The term "naval swell" may perhaps be a stumbling-block to some, who are not familiar with the slang of the streets. A tumultuous swell of angry waters it clearly is not, for it is described as sitting in the corner of a railway carriage. In the terminology of Mr. Bicknell, and those who resemble him, a "naval swell" signifies nothing more nor less than "an officer of high rank in Her Majesty's Navy." "No bag?" says commercial traveller at my side." Now we ask Mr. Bicknell whether, speaking gravely and with deliberation, he can assert that there was any commercial traveller whatever in the carriage. The statement, as he makes it, seems to us, if not incredible, at least one not to be accepted without inquiry. Commercial travellers do not frequently travel by express trains to Folkestone in the company of "blushing young ladies" and "naval swells." Express trains are costly luxuries; "blushing young ladies" and "naval swells" travel in first-class carriages; but commercial travellers make humble earnings, and usually travel by the second-class carriages of the slower trains. Again, why should the commercial traveller ask, "No bag?" Why should such a personage feel an interest in "bags"? We can understand that a barrister, or a pelican endowed with the organ of speech, might put such a question, for they both carry bags. But why should a commercial traveller ask it? Half a century since the tradesman's agent trudging on foot across country, or riding a pack-horse up rutted drifts to lonely houses and remote villages, used to be known by his bags, and to be called "bagman"; but years ago, he discarded his "bags," and replaced them with boxes and cases. "No bag?" Why, had a bishop been in the carriage, he would have been just as likely to inquire if Mr. Bicknell had not provided himself with "a mitre." The "naval swell" might with just as much propriety have put the interrogatory, "What, no war-paint?" But let us pass on to the last paragraph. "I took one thing more, the impress on my mind—not lips—of the last speaker's pretty face." You see, the commercial traveller and the "naval swell" were present. The susceptible and fascinating Garibaldian could not, therefore, kiss the blushing young lady then!—but he has often dined with her since!

Mr. Bicknell's first chapter is a fair sample of all his book. He visits Italy and Sicily, and avers that he hears the firing of Garibaldi's army, but the martial sounds never startle his reader's ears. He represents himself as "In the Track of the Garibaldians"; but this is no fair statement of the case: from first to last he is only on his own track, with admiration following his own image, even as animals of a lower species, with more grace and greater profit to spectators, pursue their own tails. Garibaldi, Italian Liberty, the Patriots of the South and the Excursionists of the North all come in for sneers and detraction of some sort, although the author professes to regard them with approval. Mr. Algernon Sidney Bicknell, as he stands in Cafés stroking his beard and eyeing his noble semblance in the mirrors; Mr. Algernon Sidney Bicknell flirting with a lovely assassin while her "ancient duenna is" (to revert again to the text) "*playing the respectable*"—is the true hero of the narrative. Garibaldi, as we have before intimated, is only the bookseller's boy engaged to go round to "the trade" and get "subscriptions for copies."

The Oxonian in Iceland; or, Notes of Travel in that Island in the Summer of 1860; with Glances at Icelandic Folk-Lore and Sagas. By the Rev. Frederick Metcalfe. (Longman & Co.)

THERE seems to be a general revival of interest in Iceland as a country,—in life in Iceland and in Icelandic legends and literature. In respect of the latter, 'The Story of Burnt Njal' was but recently upon our tables; while, in respect of the former, Capt. Forbes's spirited volume has but lately been closed. And now the Oxonian excursionist produces his notes and jottings taken upon the spot, having previously earned for himself a fair reputation as a tourist and angler in Norway.

Charms enough abound in the northern island to account for this reviving interest. It exhibits wondrous natural phenomena unrivalled and unexhausted. Its desolate wilds, its lava-paved plains, its fire-riven mountains, its scathed and treeless hill-sides and peaks, stretching in almost unbroken and cold continuity for mile after mile, excepting where here and there those stony portals open and admit the deep-bosomed fiords, darkly cradled in mountain shadows; its vast volcanoes, some cloven in twain, some whose roofs of snow and ice have been melted, or hurled far away by recent eruptions, some blowing hot and cold in a breath, and others still and stern under white-headed antiquity; its cluster of little lakes on one mountain side, and on the other side an immense wilderness of ice and snow, said to cover a space of three thousand square miles—as though more than one-half of our Yorkshire were suddenly denuded of humanity and dashed back to primeval ages and under the sway of primeval glaciers; its world-renowned Geysers boiling or bubbling up with fitful streams, defying all regularities and calculations of time, erupting at what minutes and to what heights they please, and then sinking down again into sullen quiescence; or positively declining to play, though a far-fetched audience of natives of many lands awaits their will and pleasure; or secretly intimating to skilled inspectors of their scalded throats that they are about to perish of diphtheria by the gradual accretion of silicious sinter,—all these natural wonders are irresistible attractions to those who can dare, and do, and endure much that is for the time most trying to civilized flesh and blood.

Then yonder Ultima Thule is an island of paradoxes, as Mr. Metcalfe has noted—paradoxes as attractive as its wild scenery. There as many as nine suns have been seen in winter without sending forth the warmth of one in summer. There mid-winter and not mid-summer is the appropriate season for thunder and lightning. There islands rise from the depths of ocean without warning, and without warning return whence they came; there, too, as voracious travellers have affirmed, clouds at first no bigger than a man's hand sometimes sweep down on a man's head, like fast-pouncing falcons, and disorder the wayfarer's beclouded brains; there the measurable fountain of to-day becomes the rushing and boundless river of to-morrow, and, again, on the next day dwindles down to its fountain-limits. There, too, in continuance of remarkable natural paradoxes, the sea brings fire-wood, and inland lakes afford ocean-cod; dark ducks with white rings round their eyes swim in the boiling Hvers, and fire and ice literally blow hot and cold upon each other in grim contiguity, and steam jets ascend from craters in the very neighbourhood of accumulated snows.

This land of fiery activities and glacial

deadness possess also strong human interests and points of attraction. It has a history marked by men and by events which British inquirers love to study. There, a thousand years and more ago, lived those bold Vikings whom Englishmen venerate even as do Icelanders, and to whom, perhaps, they owe much of their love of liberty, frankness and adventure. Visit Iceland, and you may listen to a living people (if you can understand them) talking face to face with you in a language almost identical with that of the old Vikings; you may see a people, where not demoralized by drink or the habits of seaport towns, still adoring liberty, nobly and patiently struggling with political depression, and hopelessly combating an inclement and almost intolerable climate; their agriculture walled out by the devastations of old fiery torrents, and sternly rebuked by the encroachments of cold glaciers; and their endurance tested to the utmost, while the elements of a brave old nature not infrequently manifest themselves in the peasant's poor hovel or the parson's miserable manse. "It was the flower of Scandinavia," exclaimed an old Icelandic gentleman to our tourist, "that came to Iceland; they had Kraft in them, and they have it in them still, if they had a chance of showing it," to which Mr. Metcalfe adds, "In no country that I ever visited is there a greater amount of disinterested kindness and honesty of purpose in active operation."

From Oxford to Iceland is not now an excursion of much peril or cost, if prudently provided for and seasonably undertaken,—and probably it will become the fashion, and then the geysers and volcanoes will be as much overrun, overdone, and overdrawn, as the Alps and Italy. We must not, however, expect from these hasty summer tourists elaborate volumes like those of Henderson, whose two illustrated octavos still afford us more information about the country or certain parts in particular, than any other. But then Henderson resided there for parts of two years, instead of scampering over the island for about two months. Henderson was grave, leisurely, and always professional; while Mr. Metcalfe is spirited, fast and apparently glad enough to throw off his gown, give up the Articles, and shun all that is ecclesiastical, while, forgetting church stories, he takes up with old fables of fairies and with tales of Trolls. All the better this for the general reader, whatever it may be for the particular author. Whether such uncanonical excursionists leave behind them the odour of Oxonian sanctity, we may never learn; but we do learn from this very deponent that the memory of Ebenezer Henderson is still fresh and green in Iceland, for "he presented my host's father with his signet-ring, which is preserved with other family relics;" and, in another place, Mr. Metcalfe remarks, "I visited the 'name stone,' a crag of yellow soft tuff, on which Henderson, the missionary's name, is cut in Hebrew characters, with the date of his visit, 1815." The said missionary made the circuit of the island, and crossed and recrossed it more than once, for the purpose of disseminating the Icelandic version of the Scriptures, and Mr. Metcalfe alone of recent travellers trod in some of Henderson's footsteps, and even away from them, to gather up fragments of folk-lore and materials for the volume now presented to the public. This partial novelty of route distinguishes it, as the writer claims, from the notes of other British travellers, who have "all confined themselves to the South-West and West, with Thingvall and the Geysers."

First scenes and first thoughts are thus described:—

"The aspect of the country is wild and savage

enough. Mountains in every direction; those on the right having the peculiar abrupt outlines, and some of them the conical shape, that bespeak volcanic action. The road, tolerable at first, becomes in time a mere row of deeply cut ruts full of muddy holes, charged with water by the recent rains. Still there was something delightful in the very thought of turning one's back for a time on towns and the inhabitants thereof; in feeling that human nature really did not require so much pampering, and dressing and shaping after all: that if I wanted shelter, there was the tent to cover me; or if food, my baggage contained it, or the means of getting it. The rain too has ceased; although my skin-overhauls and macintosh made me quite independent of rain. The sun was out, and the Arctic Flora glistened cheerfully, and spread abroad ambrosial odours. On the dry stony spots grew the beautiful *Dryas octopetala*, or mountain avens, in thick white patches. The *Statice armeria*, with its rose-coloured heads and downy stalks, as well as wild-thyme and the different galiums, seemed equally anxious to avoid the boggy ground, leaving it in the undisturbed possession of the saxifrages, the butter-wort and lilac-coloured cackoo-flower; while here and there a space of short grass spangled with dandelions and buttercups, and green with the multifarious delicate plants of the far North, showed that the short summer was now near its full."

We soon arrive at a scene of characteristic desolations:—

"The whole scene around was one to make the flesh creep, and mine crept accordingly, while my teeth or tongue chattered within me, saying—'This is desolation.' Those people whose religion consists in the worship of fire need only come and see what I see; and their veneration would cease. What a relief to me at this moment, as I scrambled with bones unbroken to the highest point of our route, and beheld a scene of transcendent pomp and splendour! The dark cloud-curtain over the Jökuls to the south-west was terminated abruptly by zigzag streaks of ruddy gold shooting athwart the dappled flecks of epaline pink, which dot and drape the sky upwards to the zenith. And, see, yonder appear four violet-edged eye-shaped sky-rents, gold-centered; and away to the north-west, horizontal layers of salmon-colour, maize, and magenta. And then the heavens are bathed, in front of us, with one delicate, uniform glow, and we can descry in that direction the lilac-coloured mountains of the distant Skagafof, while to the east are pale snowfields tipped with the reflected light of the sinking luminary. But see, yonder, a few miles off to our left, heavy volumes of white vapour are rolling along; and sure enough, by referring to my map, I find that this must be the hot springs of Hveravellir, which, according to Eggert Olafsen, were in his time the most extraordinary work of nature in Iceland, but the chief one of which, I believe, is now effete: with my glass I can detect several caldrons at work."

On we pass over various roads and no roads, over black sandy hills, quite bare of grass, sprinkled, however, with white flowers. Yonder is a waterfall, and here a river, that must be forded by men and by horses. The spray dashed up from the crossing cavalcade by the north wind chills and discourages; the water rises to man's knees, but soon his feet touch the opposite shores. Close by is a turf-built parsonage, where the grandfather of Thorwaldsen, the sculptor, formerly dwelt, but where his eminent grandson was not born, having first seen the light neither in Iceland nor in Denmark, but on the high seas between them. A mountain must be passed and a torrent crossed before reaching sleeping quarters; the guide grumbles about going on, and shows his displeasure by dashing furiously among the horses and lashing them into a gallop. At a rattling pace they go along a path winding upon the face of precipices. "Hoho! hoho!" cries the unchecked guide, and holds on his breakneck career; yet the top of the pass is safely gained. But soon the houses

grow dim in the misty vapours of an Arctic midnight, and dangerous bogs stretch out obscurely, until in another hour the Oxonian reaches the hospitable farm-house of Stefan of Reinstadir.

Such is an abbreviated specimen of one jaunt, and it may stand for many others of a similar kind. The dangers are much alike by land; but we have yet to illustrate the peculiar danger of the country—the crossing of unbridged rivers. No Telford or Stephenson has up to this time carried flying arches or tubular tunnels across these wild waters. We are now upon the banks of such a bridgeless river:—

"Here, for instance, is the great Skialfandi-flot; so called by one of the early settlers, Gardar, who dwelt for a winter at its mouth, from its rapid quaking motion. Big it is indeed, for it has come all the way from the middle of the island. Between those mighty ice-laboratories, the Klofa and Arnafell Jökuls, it and its giant sister the Thiorsá were cradled; and parting at the moment of their birth to meet no more, except in the eternal ocean, the one rushed southward, snatching a kiss at the fire demons of Hekla; the other, hurling past that ruin of ruins, the Odáda Hraun, swept straight into the embrace of the Frost-giants, who beset the Greenland sea. Here must be the ford, to judge from those few horse-tracks. Off I jump and tighten the girths; and recommend the guide to do likewise; but an Icelander being a very centaur, and part and parcel of his steed, he does no such thing. 'Follow my horse exactly,' says he; which I take care to do, my knees bent and legs thrown back almost on to my nag's tail, to avoid contact with the snow-water. Looking at the stream won't do. It induces giddiness; and, after a time, the wayfarer will fancy that he is being carried down by the current; and is not quite clear whether his heels and his head have not changed places. Mind, and keep a tight hold of the rein; for, if your poor nag stumbles over a huge hidden stone, and splashes and crashes about in his efforts to recover himself—as mine does at this moment—nothing can save you from being thrown and pommelled to death by the stones and water, but a dexterous handling of the bridle. I should like to have seen Aasheton Smith, or the Author of 'The Horse and his Rider,' in similar circumstances."

As we hurry on we only catch a glimpse of many scenes desirable to dwell upon. Yonder, upon the banks of the Laxá, is to be seen one of the most extraordinary natural phenomena in the island. Immense breastworks of lava and slag line either side of the river to the height of several feet—fortifications raised by flowing fire to flank flowing water. The fire-steam from Krablé rolled down this valley to the sea. Tracts of black and herbless lava-dust stretch before the traveller. Here is a stone-stream, which was hurried forth by a volcano in 1725, and turned many a smiling green acre into a black and frowning sterility,—sweeping away farms and farm-stock—moving and melting up to the very ark of God—a little church whose fiery sepulture was momentarily expected. But, lo! as if by miracle, the lava torrent licks up the very soil within a foot or two of its walls, and then turns off from the spared and revered edifice.

Words are but poor colours for such scenery, and painted paragraphs are but sorry substitutes for the realities. A human curiosity, then, shall vary the common course of description. We come upon a cottage ensconced in a meadow:—

"In this humble abode dwelt one of those men who are to be found only in Iceland. Thorsten Thorstensen, a tall, gaunt, grey-haired man, his cheeks arabesqued by the cares and hardships of threescore winters, was mending a fishing-net outside his dwelling. Upon being informed by Snorri, that the English priest had come to see his library, he conducted us with great readiness into a narrow chamber; the receptacle of much learning and—

more dirt. Here were piled in utter confusion several printed books and manuscripts. Thorsten is the son of a student, and grandson of a clergyman, and himself a great reader, book-collector, and transcriber. Wherever a leaf was missing from a printed volume, I found its place supplied by a pen and ink copy of what was gone, in a hand almost like copper-plate. Here is a book published without date, by N. Fischer of Amsterdam, being a collection of verses in Dutch, French, English, German, and Latin, descriptive of the most remarkable events in the Bible, with many good engravings. Taking up a very musty fusty tome, I find it is the life and acts of Dr. Faustus. A woman enters the cell at this moment most opportunely with a bowl of fresh milk, which helps to wash down the dust that had escaped from its leaves into my throat. Here, again, is an old manuscript containing ballads, lullabies, and charades. Here is a copy of a saga, never printed. * * Meantime, Thorsten has rummaged out of the dust and cobwebs a beautifully-written copy of the *Jónsbók*, the book of laws, sent by King Magnus Lagabæter of Norway to Iceland. As is often the case with Icelandic manuscripts, the paper was very brown. This is due, I am told, to the ink, which was a decoction of willow sprigs, &c.; which, though black and bright at first, dried very slowly, and in process of time gave the above tint to the paper. This prize, which I acquire for a small consideration, was sold to the bibliomanist by one Magnus, who assured him that it was 'eldgammal,' at least three hundred years old. A beautifully illustrated example of this book may be seen at the Museum in Copenhagen. 'And now, Thorsten,' said Snorri, coaxingly, 'just recite to us a bit out of one of the sagas; the stranger wishes to satisfy himself, whether your memory really is so good as he has heard it is.' Thorsten seemed to have become quite a different being, all life and animation, the moment he got among his books, like that giant of the classic mythology, who acquired a fresh lease of vital energy the moment he touched his mother earth. His wrinkled face was flushed, and his eye lit up with a new lustre, and he gave a strange look of conscious pride and humility mixed—if that is a bull it must be taken by the horns and removed in the second edition—'What is it to be then?' he asked. 'From *Grettisaga*,' replied I, 'there, where he is murdered,' holding the book in my hand to verify his accuracy. Off the old fellow started, reciting the very words of the saga with extreme volubility. Snorri then tried him in the *Eyrbyggja saga*, the *Laxdæla saga*, and the *Svarfðals saga*, with the same result. 'And now a bit of *Njála*,' said I; and away went the reciter at the same rapid pace. In short, he was not to be posed. The *Landnám* was the only saga he did not profess to remember: and no wonder, for it contains some three thousand names of persons, and fourteen hundred names of places, and is often merely a dry catalogue. This was all very remarkable; but Snorri informed me that he is not the only man in the neighbourhood gifted with these extraordinary powers of memory."

Were we at liberty to enlarge upon volcanoes, we might notice some of the twenty volcanic vents which have let forth subterranean fires in Iceland, and the very names of which are almost unknown in this our own island. The history of the terrible devastation caused by *Skaptar-Jökul* is barely or only briefly known to any besides geological inquirers. Henderson, however, has gathered together several details of the fearful eruption in the year 1783, and has done the same for *Köttlugjá*, another volcanic *Jökul* with a fiery fame scarcely secondary to any other. Nine—Mr. Metcalfe says fourteen—different times has this fatally active volcano been known to disgorge flames, and either lava or immense outpourings of hot water. From the year 894 to the year 1755 are the records of its eruptions extant as noticed by Henderson, and to these must now be added the last eruption, which began on May 15th, 1860. A priest, who lives due south of the *Jökul*, kept a most

interesting diary of this eruption, extracts from which are presented by Mr. Metcalfe in an appendix. Yet, as compared with preceding eruptions, this one was mild and innocuous, little or no lava was ejected, and immense water floods were its most marked display. Where these came from philosophers discuss, but cannot decide.

Iceland, in respect of these fiery phenomena, seems to be mockingly named. It is the very hearth and home of volcanoes, as may be conceived from the calculation of Prof. Bischoff, that the mass of igneous material ejected by *Skaptar-Jökul*, in the grand eruption of 1783, was in bulk greater than the monarch of Swiss mountains—Mont Blanc.

In closing Mr. Metcalfe's volume, we may pronounce it to be all easy reading—often graphic, and too often merely paragraphic. Our extracts are sufficient and favourable specimens of its contents. He went and he wrote not as a naturalist, not as a clergyman, not as a missionary, but simply as a scampering tourist—previously prepared by a Norwegian seasoning—and endowed, not in any clerical sense, with liveliness, quickness of eye, relish for adventure, love of legends and a fair amount of Oxonian self-esteem.

The Sisters, Inisfail, and Other Poems. By Aubrey de Vere. (Longman & Co.)

WITH much to admire in this volume, there is combined as much to question,—a want of selection and taste, which inevitably separates it from the world of real poetry.—Yet it has qualities which no less certainly raise it above the world of mere books of rhyme—without ideas or fancies set therein. The wrong our authors do themselves by an inexact and conceited use of their own rich language is an increasing evil. Not merely are foreign catch-words and idioms too largely interwoven into the home-web, but a slackness in the employment of epithet, a confusion in the structure of sentences, a hardy indifference to the limits which separate verse from prose, are becoming more and more the law.—It was a bad period for Imagination when our versifying world rolled out its periods in the Johnsonian style;—it was a worse one when the Arcadian feebleness of crooks and ribbons and lambs with their "fleeces in pomatum" was brought into fashion by the Della Cruscan. From this popper, however, the remarkable company of poets who burst forth about the time of the French Revolution gave English manliness "a rousing shake."—We are now in a new era of mannerism, for the coming of which our Laureate is in some measure to be thanked. "Sing, heavenly muse!" is not a pattern for a poem's beginning according to which any one will aspire to work now-a-days when commencing a tale in blank verse;—and yet there is more of the singer's art in such a striking of the chord than in Mr. De Vere's hasty rush into the midst of matters:—

From nine to twelve my guest was eloquent
In anger, mixed with sorrow, at the things
He saw around us—lands half marsh, half weeds,
Gates from the gate-posts miserably divorced,
Hovels ill-thatch'd, wild fences, fissured roads—
"Your people never for the future plan;
They live but for the moment."

Criticism cannot be too minute when an author combines so much that is good with so much that is less good, as Mr. De Vere. We must go a little further in illustrating our judgment of his chances of success, by pointing out instances of unselectness, which are so many gratuitous flaws. For instance, in the 'Ode to the Daffodil,' are to be found these lines:—

And all the uncoloured world is like
A shadow-lim'd engraving.

Dead Autumn scoffs young Spring with splanetic speech!—
When in her vidual chastity the Year
With frozen memories of the sacred past
Her doors and heart makes fast.

—"Labrique smile" is not English.—We cannot find truth of epithet in "moonlight spotted rocks," nor real poetry in such a line as

Gradations of violet, purple and yellow.

The last recalls a certain piteous ballad, wherein it was told how two lovers were drowned

All by the reflux of the tidal wave.

No further specification, we apprehend, will be required to convey what we mean to the reader. If he appreciate that precision of touch which should not fail the artist, whether the object to be drawn is a cloud or a cedar,—he will perceive that its absence is the thing here complained of. If he turn to the volume, he will hardly find a page without its evidence of loose diction and traces of a hand that wanders too thoughtlessly over the keys.—What we now proceed to quote shall be given without the interruption of any remark in praise or dispraise. Here is a little poem "from the East":—

VANITY.

False and fair! Beware, beware!
There is a tale that stabs at thee!
The Arab seer—he stripp'd thee bare,
He told thy secret, Vanity!
By day a minding foot is thine;
Thou runnest along the spider's line—
Ay! but heavy sounds thy tread
By night, among the uncoffin'd dead!
Fair and foul! Thy mate, the ghoul,
Beats, bat-like, on thy latticed gate;
Around the graves the night-winds howl;
"Arise," they cry, "thy feast doth wait!"
Dainty fingers thine, and nice,
With thy bodkin picking rice!—
Ay! but when the night's o'erhead
Limb from limb they read the dead!

A picture of Irish famine:—

Sudden fell
Famine, the Terror never absent long,
Upon our land. It shrank—the daily dole;
The oatmeal trickled from a tighter grasp;
Hunger grew wild through panic; infant cries:
Madden'd at times the gentle into wrong:
Death's gentleness more oft for death made way;
And like a lamb that openeth not its mouth
The sacrificial People, flit-bound,
Stood up to die. Amid inviolate herds
Thousands the sacraments of death received,
Then waited God's decree. These things are known:
Strangers have witness'd to them; strangers writ
The epitaph again and yet again.
The nettles and the weeds by the way-side
Men ate: from sharpening features and sunk eyes
Hunger glared forth, a wolf more lean each hour;
Children seem'd pigmies shrivell'd to sudden age;
And the deserted babe too weak to walk
But shook its hands, pitying or curious, raised
The rag across him thrown. In England alms
From many a private hearth were largely sent,
As oftentimes they have been. 'Twas vain. The land
Wept while her sons sank back into her graves
Like drowners 'mid still seas. Who could escaped:
And on a ghost-throng'd deck, amid such cries
As from the battle-field ascend at night
When stumbling widows grope o'er heaps of slain,
Amid such cries stood Mary, when the ship
Its cables slipp'd and, on the populous quays
Grating, without a wind, on the slow tide,
Dropp'd downward to the main.

There is the charm of deep and sincere nationality in Mr. De Vere's volume. The larger portion of it, 'Inisfail,' is a collection of scattered poems, arranged in three sections, on every imaginable subject—historical, picturesque, devotional—in every conceivable metre,—the connecting link of which is Irish feeling during three different epochs of Irish history. Here, again, our poet takes too much for granted. Many of his lyrics require a large amount of annotation and elucidation ere their import can be rightly comprehended. The following, however, calls for no light:—

WINTER SONG.

The high-piled cloud drifts on as in scorn,
Like a ghost, half pining, half stately,
Or a white ice-island in silence borne
O'er seas congeal'd but lately

With nose to the ground, like a wilder'd hound,
O'er the wood-leaves yellow and sodden
On races the wind but cannot find
One sweet track where Spring hath trodden.

The moor is black; with frosty rime
The wither'd brier is beaded;
The sluggard Spring hath o'erlept her time,
The Spring that was never more needed.

What says the oak-leaf in the night-cold noon,
And the beech-stock scoffing and surly?
"Who comes too soon is a witless loon
Like the clown that is up too early."

But the moss grows fair when the trees are bare,
Long torpid Spring finds a pillow there;
And beside it the fern with its green crown saith
"Best bloometh the Hope that is rooted in death."

We must stop. No one that reads this book can mistake it for one of those desperate attempts by commonplace men who succeed in deceiving themselves and their yet more commonplace readers.—Few, however, we fancy, among those less sensitive to incompleteness than it is our duty to be, will place the volume on that shelf which contains the few "golden books" of modern English poetry.

The Formulae of Plane Trigonometry, printed with Symbols (instead of Words) to express the "Goniometrical Ratios." By C. W. Dodgson. (Oxford, J. H. & J. Parker.)

THE Mathematical Lecturer of Christ Church, Oxford, has here published a little tract, which would have had a short notice in another part of our journal, but for a peculiarity which has a useful and praiseworthy character. Desiring to introduce certain changes in trigonometrical notation, he seeks the opinion of the mathematical world before he commits himself to a regular treatise. Now, first, the improvement of mathematical notation does not receive the discussion due to it; next, the plan adopted by Mr. Dodgson is one of the best which could be suggested. And it would be well worth the while of the proper Section of the British Association to make Notation in general the subject of conversation.

That nondescript animal the "general reader" is supposed to lump up *sines* and *cosines* with other things, in the manner of Swift:—

Sines, tangents, secants, radius, cosines,
Subtangents, segments, and all those signs;
Enough to prove that he who read 'em
Was just as mad as he who made 'em.

But even the general reader may have almost arrived at the knowledge that sine, cosine, &c., are names given to the proportions which exist between the sides of a right-angled triangle.

The following are the names of the symbols, the usual abbreviations, and Mr. Dodgson's proposed symbols:—

Sine of θ	$\sin \theta$	$\curvearrowright \theta$
Cosine of θ	$\cos \theta$	$\curvearrowleft \theta$
Tangent of θ	$\tan \theta$	$\curvearrowright \theta$
Cotangent of θ	$\cot \theta$	$\curvearrowleft \theta$
Secant of θ	$\sec \theta$	$\curvearrowright \theta$
Cosecant of θ	$\csc \theta$	$\curvearrowleft \theta$
Versed sine of θ	$\text{vers } \theta$	$\curvearrowright \theta$

On this suggestion, Mr. Dodgson asks three questions,—to two of which we shall subjoin our own answers:—1. Do you object *in limine* to the introduction of *any symbols whatever* as substitutes for the words *sin*, *cos*, &c.? We answer that we have no objection whatever to the suggestion; but that as to the introduction, we shall be guided by our opinion of the value of the proposed symbols. But by suggestion we mean such suggestion as Mr. Dodgson's. We very much disapprove of fundamental changes put forward in elementary works, especially when the proposer is a teacher who has the power of forcing his symbols into use in a particular college or school.

2. If not, can you suggest others better

adapted than these for such a purpose? We think, and without any doubt, that we can. All the proposed symbols require the pen to be taken off in their formation: and we should utterly reject, as equally cumbrous with the ordinary abbreviations of current writing, any symbols which demand two acts of the pen. Now, in the current writing of *sin*, *cos*, *tan*, &c., the only nuisances are the dotting of *is* and the crossing of *ts*. We are sure that the *cos* of ordinary writing is preferable to Mr. Dodgson's substitute. We consider this of more importance than close attention to analogy in the formation of the symbols. But we think this need not altogether be lost sight of. At once, we can suggest what we should very much prefer to the system before us. For the sine, a circle with a dash downwards, like the *p* of Mavor's shorthand. For the cosine, a dash beginning with a hook, or *pothook*, as the writing-masters used to call it. For the tangent, a junction of these symbols, made of a circle, a dash and a pothook. For the cosecant, secant and cotangent, the preceding symbols inverted. For the versed sine, a dash, a horizontal stroke and the symbol of the cosine: a likeness to $1 - \cos$ for a symbol which is very rarely used. All the symbols to be rather in larger style than the letters, in imitation of the integral sign, which was originally the long Italic *J*.

The third question asked has reference only to the supposition of some approval of the particular signs suggested.

We do not say that we could, on further consideration, suggest nothing better: nor do we say that we would at once countenance any change at all. We should require much discussion to make up our minds on either point.

Prison-Books and their Authors. By John Alfred Langford. (Tegg.)

CAGED linnets are among the vocalists who sing better in their native air than in their enforced captivity. A lark behind bars, and mocked by a poor pennyworth of green turf, is a sorry sight, and his song is not a carol, but a complaint. Poets may assert that—

the nightingale sings best
When its warm and downy breast
Is wounded by the thorn,

—but we give no more credit to the assertion than we do to the cruel argument that the voice of Philomel is improved by driving a red-hot needle through the singer's eyes. We know of no living thing that is particularly amended by solitary confinement, or even by gregarious imprisonment. When the Red Indian looked on the stone walls, behind which men were held in captivity for debt, his comment was, that they were little likely to kill deer and procure skins in such a forest as that.

There is one conclusion to which most persons who study 'Prison-Books and their Authors' must arrive, namely, that no book ever composed in a prison was the better on that account, while many books have been much the worse for it. Had Raleigh been able to sit down in his own library to write a History of the World, he would have made that noble work still more noble. Cervantes would, at least, have put together as graphic a 'Don Quixote' at full liberty as that he composed under restraint; and whatever may be said of 'The Pilgrim's Progress,' one thing is clear, that Bunyan could not have written more execrable verses at home than he wrote in gaol. By the way, Mr. Langford does not seem to be aware that Bunyan wrote poetry in gaol, and that many of his verses have been recently published.

Mr. Langford himself admits that Mont-

gomery's Prison-Books are not profitable to the writer's reputation; and as for the once popular 'Prison Thoughts' of Dr. Dodd, they are only reflections of the impudence, hypocrisy and mendacity of that fashionable and justly-hanged parson.

Of the dozen authors of prison-books noticed in this volume, the clerical felon, Dodd, alone fails to make any claims on the sympathy of readers. For the captivity to which many of the others were subjected, the respective Governments of the respective times could, doubtless, allege more or less reason. Take, for instance, the political prisoners. Boethius, in the reign of Theodoric, allowing himself to be deluded by some Roman Persigny, ventured to express a hope that his country might recover liberty; and he suffered death for the expression. Surrey underwent the same penalty, under a king who was as absolute as the Arian Ostrogoth, and for as small an offence—his failure in a war-episode at Boulogne being the pretext rather than the crime. Political expediency, again, slew Raleigh. James Montgomery was deprived of liberty, not for claiming freedom unbecomingly, but rather because he was the foremost man of a party which was less prudently patient of restraint than he. The Chartist, Cooper, underwent a more extreme penalty, but his offence was also greater. He uttered words which were followed by acts of arson on the part of his hearers; and it was no unsustainable logic, although a counsellor like Follett used it, which held that the eloquence was the cause of the incendiarisms, and that the orator was as worthy of punishment as if he had applied the torch. The strongest contrast with the philosopher who was clubbed to death, for making a suggestion to Theodoric, is in the case of the journalist who was tried and convicted during our last Regency. Some ultra-loyal writer in the *Post* had described the Regent as "an Adonis for loveliness." Leigh Hunt's comment on this text was that His Royal Highness was "a corpulent man of fifty." This was construed into sedition; a jury accepted the construction; and the audacity of the writer was punished by a two years' imprisonment and a fine of 1,000*l*. This terrible traitor of the Regency period lived to be the pensioner, and aspired to be the Laureate of the Regent's niece, the Queen Victoria.

Between the contrasts above spoken of, there have been sadder examples than either, of the tyranny of men in power, exercised against those who made protest, more or less loud, against the way in which such power was applied to crush its adversaries. Southwell knew well that, by performing his priestly office in England, he ran the risk of death, yet no one the less laments that he underwent that extreme punishment. Bunyan, for preaching contrary to law, was stricken by the milder sentence of a dozen years' imprisonment, and that often relieved by a rule which enabled him to enjoy seasons of liberty. The Government of Charles, however, was moved against Bunyan by the same influences which acted on that of Elizabeth. All opponents were to be put down. The Cavaliers thrust Wither into a dungeon because his harp was strung to Puritan harmonies. The Puritan Government put Lovelace into the Gatehouse because he was a dangerous adversary; but it must be remembered he was not a strictly honourable antagonist, and he was as much punished for breaking his word as for more positive offence against the then existing powers.

When Mr. Langford says, of Elizabeth and James, that "the sword of the woman was exchanged for the distaff of the man," he adopts the old sentiment which spoke of "King Eliza-

beth," and "Queen James." When he remodels this idea, however, by stating that "the female Hercules is no more, and a male Omphale reigns in her stead," he pays an unintentional compliment to James, of which he was little worthy. Mr. Langford is cruel to the reputation of Southwell. "Poetry which sings not immediately and directly in praise of God, of the Virgin Mary, of the Saints, or of the Church, or is not *purposely* hooked to some useful end, is, with him, a serving of the Devil." What higher merit in a poet than his resolution to write no line that had not usefulness for its object? Would Mr. Langford say that the erotics of Moore hold higher rank than the 'Content and Rich' of Southwell? As for the religious party spirit of the latter, it does not protrude itself in his poems in any way offensively. It is not more markedly "Romanist" than that of Wither, in his hymns, is Puritan, or than that of James Montgomery is Moravian; and it is less sour and selfish than much that might be cited from Cowper when writing according to his own views of religion as it was understood at Olney. Southwell, in his universality, is as truly an English poet as Milton, and we should as soon look for Romish censure on 'Paradise Lost,' as for an attempt to sneer down Southwell for being a poet as well as priest of the Romish Church. Some of the pieces of the latter are as "Catholic" as the general devotional hymns of Wither, or as the 'Universal Prayer' of Alexander Pope. 'Love's Servile Lot' might have been written by Anacreon, affecting anger against women; 'Scorn not the Least' might have come from holy Mr. Herbert; while 'A Child my Choice' is so admirably *Catholic*, and so little *Roman Catholic*, that Dr. Watts might have been proud to be the author.

In another way, Mr. Langford is "at sea," when critically dealing with George Wither. He quotes the lines—

Of all these pleasures past,
Nothing now remains at last,
But Remembrance, poor relief,
That more makes than mends my grief.

—In a foot-note he cites the following lines from Tennyson, evidently believing that our Laureate was thinking, when he wrote them, of Wither:—

This is truth the poet sings,
That a sorrow's crown of sorrow is rememb'ring happier things.

—Mr. Langford forgets that Tennyson is here referring to the noble passage in Dante:—

Nessun maggior dolore,
Che ricordarsi del tempo felice,
Nella miseria.

Mr. Langford has made a curious mistake in his chapters on Dodd. He grounds his biography of Dodd on a novelette in a book, the author of which has simply placed the fashionable preacher of his day in situations in which he might have been, according to his well-known character, but all of which Mr. Langford adopts as solemn reality!

The chief interest in a volume like this arises from comparing the various ways in which prison poets have treated the same theme, particularly when dealing with dreams of liberty, and daisied fields, and messages of love to one who is not the gladder for being free. Young readers especially may find profit in making these comparisons, for the pursuit should lead them to a study of the poets generally,—our own and those of foreign lands, where there is no lack of fettered minstrels, some of whom sing far more touchingly to the—

Hirondelle gentille,
Voltigeant à la grille
Du cachot noir,

than James Montgomery to the "Robin" of his prison, whom he brought down to burlesque by making him rhyme to "Dobbin."

A Tour in the United States, Cuba and Canada.

By Henry Ashworth, Esq. (Manchester, Heywood; London, Bennett.)

For years past narratives of travel have been getting more and more artificial, until they are now, as a rule, almost as much at variance with reality as the productions which are avowed to be extravagances of imagination. The publication of Beckford's tours taught book-makers the art of amusing with light sketches of foreign manners, brisk with gossiping satire, and alternating between flippancy and pathos. The lesson was not lost on his numerous admirers, and the fashion sprang up amongst writers of enlivening their descriptions of adventure in remote lands with the *badinage* current in London drawing-rooms. Whatever might be the subject, a court, a battle-field, the ruins of a classic temple, the splendour of a religious ceremonial, or the loveliness of the sacred city, the pen indited nothing that had not reference to the humour of Mayfair idlers, or a more humorous but less refined class of the home-consumers of light literature. In this spirit Kinglake, with unusual force, delineated Oriental scenery and usages, and Albert Smith, with unaffected gaiety of heart, brought Mont Blanc to Piccadilly. At its outset the movement was in a right direction, and for the most part commendable; but it has progressed to such a point that artists of humbler powers, caricaturing the touches of their masters, and inflated with self-consciousness, decline to record anything that has not a manifest counterpart in their daily experiences on the banks of the Thames. Under their guidance the reader visits Moscow or Alexandria, only to hire public conveyances, drive bargains with tradesmen, eat dinners of many courses, and suffer all the heat and discomfort of London hotel-life with a difference.

It is a relief to escape from the constrained vivacity of these steel-pen egotists, and journey through the United States from north to south in the company of a sober and well-educated gentleman, who is content to put down the result of his observations in simple and intelligible language, and does not from a mistaken sense of professional duty stand on his head or pitch a summersault in every alternate paragraph. In no degree ambitious of artistic reputation, Mr. Ashworth, in his own proper character of an English manufacturer, tells us with delightful brevity what he saw during six months of travel in North America; and as he was always on the look out for trustworthy indications of national sentiment, position and progress, and surveyed the social phenomena brought before him with a mind at the same time acute, practical and free from prejudice, his narrative is as valuable as it is entertaining.

Entering South Carolina with a strong national repugnance to slavery, Mr. Ashworth was astonished at the aspect of the institution in that State:—

"The labour on the plantations is mostly conducted on a system of piece-work, which the labourers can easily perform in six or eight hours; and afterwards they have the command of over-time for cultivating their own little patches of ground, or for raising their fowls and pigs for their own individual profit. As it is more than fifty years since any of the negroes were imported from Africa, those of the coloured race of America, although of African blood, are now, in effect, the naturalized population of the country. On some of the principal estates the removals have not been frequent; and in these cases the ties of local and social attachment are said to be strong. Being upon Edisto Island on a Sunday, we attended one of the chapels, which belonged to the Presbyterian body. The congregation was large, probably as many as 600 were present, of whom there might

be about 200 white and 400 coloured persons. The coloured people were all of them slaves; they appeared comfortable, well dressed, and many of them rather showy. It was the day of Communion, and at the close of the sermon, about eighty of the whites partook the ministration of the Sacrament. When they had retired, the table was surrounded by about 120 of the coloured people, and we observed that the ministers, elders, and deacons again officiated in like manner, and the same degree of solemnity and decorum was manifested by the coloured recipients. We inquired of one of the ministers in attendance, whom we afterwards met, whether this religious service that we had observed was at all unusual; and he informed us that it was not, but that on the contrary, there was upon John's Island, which is adjoining to Edisto Island, and in the congregation over which he had charge, a much larger than this number of coloured communicants; and in the Methodist and Episcopalian bodies there, the number was considerably larger than in his. This gentleman was originally from Scotland, and as he had resided seventeen years in South Carolina, he had become attached to the country. He said he could relate a great deal that would appear surprising, of the religious feeling and very becoming deportment which had come under his notice in his intercourse with the coloured population. That although he still retained many of his early impressions in relation to slavery, yet the most painful scenes he had witnessed amongst the poor dependent classes in Great Britain and Ireland, had not passed away from his remembrance. That he often contrasted these recollections of his early life, with the state of things around him in South Carolina, where the negro had to incur the loss of his liberty; and he felt convinced that, on the whole, the negro was a gainer in the amount of care and attention which was daily exercised by his employer for his welfare, and in the greater amount of domestic comfort he was enjoying, as compared with the peasantry of places which he could name within the British Isles."

Not less interesting is the following refutation of a statement frequently heard in English society relating to the intellectual condition of slaves in the United States:—

"We drew attention to the fact—as we supposed it to be, having so often heard it asserted in this country and not contradicted—that by some recent enactment it was deemed a penal offence for any one to teach a negro to read. To this remark one of our friends replied, that there was upon the statute book a law to that effect,—not a recent enactment, but an unrevoked statute enacted by the British when the country was a colony; but that in effect this law was now no law at all, as its provisions had long since ceased to be regarded. That the little 'niggers,' as he called them, could any day be seen running to and from school, carrying their books in straps. He then named two or three young ladies, the daughters of a planter, at whose house we had recently been as visitors; and stated that he had himself been present on Sundays, when he had seen those young ladies teaching the negro children to read, and afterwards reading sermons to the older people; adding, emphatically—'Do you think that they would continue to bestow this attention to their father's slaves, if they had any dread that it was an offence for which they were liable next day to be imprisoned?'"

Here is a picture of a slave-auction somewhat at variance with the representations of the partisan writers of the North:—

"We attended one auction of negroes in the rotunda of a large hotel. They were regularly called upon, and were submitted to the bidders for examination in regard to physical blemishes. Amongst them were to be seen old and young, male and female, and each of them in succession stood forward and heard themselves described in relation to their capability for the various employments they were fitted to pursue, as well as in relation to their individual character. We were surprised to observe that they did not appear dismayed, but on the contrary, tried to show off to the best advantage, and to enjoy a spirited bidding.

The spectacle was a very humiliating one, but it was evident we were the only persons present who thought it was so. The auctioneer was very guarded in his expressions, often referring to his notes; and no doubt he felt the importance of his guarantee in reference to personal blemishes, as well as to the possession of skill, ability and character; but in those cases in which his instructions were unlimited, his encomiums were so unbounded, that one might have felt proud to have heard him speaking of one's own sons. The prices ranged variously from 800 to 1,500 dollars, or from 160*l.* to 300*l.* sterling."

The repulsive features of slavery Mr. Ashworth found to be more prominent in proportion to the recency of its establishment as an institution. In South Carolina, where servitude has been organized by succeeding generations, the negroes were well cared for, prosperous, contented, and civilized, loyally attached to the proprietors of the soil, and requiring no more severe coercion than the discipline requisite in every state of society for the government of the multitudes. The Mississippi country, which has been only lately brought under cultivation, presented a servile population in a less favourable condition; whilst Cuba, with its negroes imported from Africa, and unused to the operations of husbandry, displayed compulsory labour in the worst and most atrocious form:—

"We now come to another aspect of slavery, one which has been more recently established than that of South Carolina. The period is comparatively short since the principal part of the Mississippi country has been brought under cultivation. On this account the planters, as well as the slaves, may be considered as the occupiers of a thinly-peopled country, where the local institutions are either not completely organised, or of very recent origin. The slaves were regarded with the same sort of attention as in South Carolina; the hospitals and other arrangements for the sick were provided in the same manner; and the slaves had their garden plots, their poultry and their pigs, whereby they could realize a little money. It was evident that, although materially well cared for, they had not as yet become equally advanced in social life. We never saw any deadly weapon in the hands of any of the American planters, or of their servants: the driver would carry a whip, but the whips did not appear very frightful to look upon. Often we strolled among the negroes, mixing with the groups of their funny-looking little children, with black curly hair, as full of mirth and playfulness as children under any circumstances usually are."

Clarkson and Wilberforce never declaimed against a more hideous exhibition of brutality than that which Cuba offers to the observant visitor:—

"The slaves of Cuba have not been born in the country, as those of South Carolina and Georgia have, but have been hunted down in Africa, and brought to Cuba for sale. They are therefore not familiar with field labour, or the use of implements of husbandry; and it was often very painful to see these poor creatures toiling in gangs, handling their tools awkwardly, exposed to the severity of a driver who was standing over them armed with a whip, a sword, and perhaps a revolver. The annual mortality amongst the slaves is excessive, and as the planters do not import females, nor raise families of negroes upon their estates, as in America, the deficiency of labourers is filled up by increased importations. The 'working out' of the slave, as it is familiarly termed, is caused principally by the labour of the night. After the slaves have worked twelve hours in cane cutting, the labour of four hours in the night at the sugar-mill is superadded, and these additional four hours of exhaustion cause the vigour of the negroes to become wasted, and they die off. By the mechanism now adopted in sugar manufacture, this system of night-working may be diminished, if not entirely superseded; and we heard discussions of the question deliberately entertained, whether the economy of manufacture lay on the side of investing capital in machinery or in the exhausting of men."

The ballot was a subject on which Mr. Ashworth took especial pains to obtain information; his inquiries resulting in a conviction that the system of secret voting is both popular and works well wherever it is used by Transatlantic constituencies:—

"The secrecy of the ballot has been strongly reflected upon in this country. Whilst in America, we never heard of any dissatisfaction or desire for open voting, as a more eligible system; on the contrary, it was uniformly defended even by those who made no secret of the candidate whom they had chosen to support. In the cities of the frontier, where one-half the population are foreigners, it is alleged that the secrecy of the ballot does not provide against the corruption that exists: indeed, it would be difficult to provide a remedy against bribery where the parties who desire to corrupt, find that they have easy access to those who are willing to be corrupted."

The following glimpse of the interior of the Senate speaks well for republican manners:—

"When the Speaker had taken his seat, a venerable-looking old man immediately rose, and proceeded to invoke a blessing upon the deliberations of the day. We remarked to our friend the member, that their Congress, unlike our Parliament, allowed the chaplain of the house to enter their presence unadorned with any official gown or sacerdotal dress. He replied, 'You will not see any finery here,—neither the Speaker nor any other official is distinguishable by any outward badge of servitude. The old gentleman, the chaplain, as you are pleased to designate him, is one of the few remaining officers who served his country in the War of Independence; he is now 94 years of age, and is not well provided for, therefore he is willing to accept a small sum annually, not as a pension (you know that pensioners we have none), but by way of compensation for coming once a day to ask a blessing upon what we are doing.'"

On the amusements, commercial enterprise, and domestic morality of the citizens of the States Mr. Ashworth says much that is new, and nothing that is without value to the student. His notes on the rapid growth of towns in America are startling, as also are the many other collections of facts contained in his little manual, which we close with a hope that it will fall into the hands of literary tourists, as it points to the materials with which they ought to fill their diaries, and the simplicity of style which we would fain see a characteristic of their publications.

Memoirs of my Life.—[*Memoiren meines Lebens*].
By Dr. J. F. Castelli. (Prague.)

THE writer of this autobiography has had many of the opportunities of Lorenzo da Ponte, and we might have expected a somewhat similar story. He has lived in Vienna the whole of his long life, and since 1801 has been writing for the stage. The number of his dramatic works amounts to a hundred and ninety-nine; for some years he was the poet of the Kärnther-Thor theatre; he knew all the singers and some of the composers of the Austrian capital; he remembers a character who figured importantly in the life of Mozart, and the first performance of the 'Zauberflöte.' He knew Sonntag, and Weigl, the composer of a popular German opera, 'The Swiss Family,' of which he wrote the *libretto*; Zacharias Werner, the dramatist; and Theodor Körner, the patriotic poet. He collected more than 200 songs, 1,800 snuff-boxes, a mass of books of plays, portraits of actresses, autographs of actresses, and all the playbills of Vienna since the year 1600. But, out of all these materials, Dr. Castelli is very far from constructing a living picture, and his life and portrait furnish us a reason. He was most part of his life an *employé*, and his portrait gives us the thorough bureaucratic face of a German *Beamte*.

The love adventures for which Da Ponte's life was chiefly remarkable, figure very slightly with Dr. Castelli; he once loved an actress who was false to him, and once a young Hungarian who could not spell correctly. The chief interest of his autobiography lies in the illustrations of manners and customs of the former time, and the occasional allusion to well-known names which now seem to belong to the past.

A long and interesting sketch of Schikaneder, the author of the text of Mozart's 'Zauberflöte,' the manager who produced it, the critic who gave Mozart instructions how to write for the public, and the good friend who cheated the composer of the profits of the opera, will be relished by all students of the Life of Mozart. Any one familiar with Mozart's operetta, 'The Impresario,' will remember many traits of Schikaneder's character which Dr. Castelli fully confirms:—

Schikaneder [he says] was, strictly speaking, a natural poet; if he had received scientific training he would have better satisfied æsthetic laws. The verse in his operas was, truly, enough to make one's hair stand on end, and was full of contradictions. Read through the text of the 'Zauberflöte,' which only a Mozart could have set to music. He was a pitiful singer, because in his operas he either wrote the music of all the passages he had to sing himself, or dictated it to the composer. Thus several of the airs in the 'Zauberflöte' are by Schikaneder himself; Mozart made them works of art by his wonderful instrumentation. The bass Sebastian Meyer told me that Mozart had at first written the duett between Papageno and Papagena, when they first meet, entirely different from the way it stands at present. Both cried out in astonishment 'Papageno!'—'Papagena!' But when Schikaneder heard this he called out to the orchestra—'You Mozart! that is nothing;—the music must produce more astonishment; both must look at each other in silence, then Papageno must begin to stammer—'Pa-pa-pa-pa-pa'; Papagena must repeat this till at last both have spoken the entire name.' Mozart followed the advice, and the duett had always to be repeated so. Further, when the Priests came together in the second act, at the rehearsal, there was no accompaniment to the scene. Schikaneder, however, desired a pathetic march to be composed for it. On this Mozart asked the musicians for their parts, and wrote at once the splendid march which now stands there. It is laughable to relate what Schikaneder said to a friend who complimented him on the success of the 'Zauberflöte,' and on his share in the work. He replied—'Yes, the opera has succeeded, but it would have succeeded much better if Mozart had not spoiled my ideas as he has done.'"

Of the first performance of the opera, Dr. Castelli says: "The 'Zauberflöte' was first given on the 30th of September 1791. On the playbill it was simply stated, Herr Mozart will today direct in person."

It is, however, natural that Dr. Castelli should not tell us much about Mozart, whose death took place in the tenth year of the autobiographer's life. The account of Weigl is more detailed, and the history of the 'Schweizer-Familie' may be worth repeating:—

I must here observe that I may call the text of the 'Schweizer-Familie,' in the fullest sense, my work, for I only took the idea from the French; the characters, the scenes, the dialogue, the situations, and the distribution of songs, were entirely my property. If this is called adaptation or translation, there are very few original works in the world. When I brought the first act to Weigl, he thought it had succeeded fully, and some parts pleased him so that he set to work to compose without waiting for the other two acts. But will any one believe that he did not like the splendid air of Emmeline, the air which is the sun of the first act, and he doubted if he would set it to music? It was not till some others had read the

first act, and saw the capabilities of the air, that, at their earnest prayer, he set it to music; and then he had to compose it three times over before he contented himself. I must here observe that Weigl, in all his operas, as soon as he had composed any piece, would play it over on the piano to those two friends for whom he always wrote the best parts, and would ask their advice. I now worked at the other two acts of the opera, and then read the whole at Weigl's house to himself and his two friends. It pleased them thoroughly. I thought I had now completed my work, but I had not by any means. The poet must go hand-in-hand with the composer, if they would bring into the world a capable child. Weigl soon asked me to put a couple more verses in one place, or to strike out a couple in another; one time he wanted verses with a single, another time with a double rhyme. At the rehearsals one speech must be shortened, another lengthened. At last, on the 14th of March, 1809, the opera was given in the Kärntner-Thor, and received with enthusiasm. It was not a success, it was a jubilee. Now that I had earned so much honour, how did I come off in the pecuniary question? It has long and justly been a subject of complaint in Germany that dramatic writers receive so little payment for their works, while authors in France build themselves country houses, and touch yearly rents of 20, 50, 80, 100,000 francs. The 'Schweizer-Familie' had a European reputation, partly from the excellent music of Weigl, partly, also, from my text. It has been given in every theatre of Germany, and has succeeded in every one. In Vienna it was given more than a hundred times. It has been translated into French, Italian, Russian, and Danish. Guess what I received. You will never guess. I got 8 florins (16s.) True, I got 100 florins in bank-notes, but to bring the bank-notes to the level of silver you had to divide first by five, and again by two and a half.

Dr. Castelli's adventures with his patriotic songs were as unfortunate as his *librettos* could have been. On one occasion he was refused permission to print a song of his own which another was allowed to pirate. At the time of the French invasion of Austria, a patriotic song was the cause of Dr. Castelli's proscription. He applied to the Emperor of Austria for help, but the Emperor, on hearing that he had written a war-song, asked who had told him to do so. The mention of the Censorship, which forbade him to print his own works, yet suffered another to pirate them, leads us naturally to the most amusing passage in Dr. Castelli's autobiography, his chapter on the Viennese Censorship.

The first censor of whom Dr. Castelli had any experience was a certain Hager, whose reverence for the name of God was so profound that he only allowed the name to be employed in the Court Theatre. All the suburban theatres had to substitute Heaven, and once a rhyme of Dr. Castelli's was cruelly murdered, sacrificed to the Censor's reverence. The precision of Censor Hager in all delicate matters was equally commendable, and not even the stage directions escaped his observation. When it was written "He kisses her," the Censor would alter it to "He gives her a kiss." The production of Schiller's 'Don Carlos' was long forbidden, because *Don Carlos* loved his stepmother; in 'The Robbers,' the *Father* was turned into an uncle, and a stupendous effect was produced by the cry of "Uncle!" substituted for Parricide. A composer wrote a sonata to the manes of Hummel, but there was a law of the censorship that no Dedication might be printed without the permission of the person to whom it was offered. Accordingly the Censor asked the composer to produce the permission of the manes of Hummel. Another time a censor struck out a long quotation from Montesquieu, and rewrote it in the opposite sense, and, probably,

in a dissimilar style. But it had to figure as a quotation from Montesquieu. Dr. Castelli was twice fined for disrespectful remarks on the language of the official journal of Vienna, though his remarks appeared in Dresden. The *Imperial Royal Vienna Gazette* placed among its deaths, "Marianna H——, Lady-in-waiting to Her Majesty the Empress, born Hölzl," and Dr. Castelli observed, "according to this wording, the Empress's maiden name was Hölzl." Next time, an Academy was announced for the benefit of "The in-the-town-hospital-grown-poor citizens," and the Doctor remarked it must be an ill-conducted hospital in which citizens grew poor!

The first volume of Dr. Castelli's autobiography brings us to the year 1813. Two or three more volumes are promised to bring the life nearer to the memory of men still living.

OUR LIBRARY TABLE.

A New System of Nature, on the Basis of the Holy Scriptures, being an Inquiry into the Origin of Matter and the Formation of the Earth. By W. Hamilton Stewart. (Glasgow, Porteous & Hislop.) Another vast system which we shall not undertake to describe. It seems to be collected from all quarters; and Swedenborg in particular, is more used than named, unless an unusual amount of casual coincidence has occurred. The first reference which caught our eye did not impress us favourably. In his demonstration that the sun is burning gold, Mr. Stewart says that Sir John Herschel has pretty clearly proved the sun to be a body of liquid fire: and for this he quotes a quotation in the *Edinburgh Review* for 1833. Now Sir J. Herschel not only never thought the sun was liquid fire, but he distinctly approves of the notion of those who suppose the black spots to be parts of the dark solid body which is under the luminous atmosphere. We have indeed heard that some people at the Cape supposed that Sir John entertained such a notion: but we have also heard that a preacher in that part of the world told his audience that if any one of them doubted of future fire, he had only to go to Feldhausen, and Sir John Herschel would show him a red star he has just discovered, which he (Sir J. H.) had no doubt was "the very place!" We recommend those who attempt to follow Mr. Stewart to look carefully after his references. We do not intend to enrol ourselves among them: for what we have seen by no means satisfies us that Mr. Stewart has the depth and accuracy of knowledge which so large a speculation demands. At the last moment, we see by a prefatory note that this is a posthumous work, written twenty years ago. We cannot approve of the judgment of the friends who published it: but justice to the memory of the late Mr. Stewart binds us to inform our readers that he is not answerable. Like a sensible man who felt impelled to speculate, he confined his circle of publication to his own family: it may be that he knew his own deficiency, and would not have thanked his executors for unveiling them to the whole world.

The Ferns of Derbyshire, illustrated from Nature. Edited by W. E. Howe. With a Preface by the Rev. Gerard Smith. (Wertheim, Macintosh & Hunt.)—Local fern monographs are acceptable to county residents, and such is the chief interest 'The Ferns of Derbyshire' will awaken. The county itself is, as everybody knows, beautiful apart from ferns, and still more beautiful with them. It is, of course, far more pleasant to find a rare fern in a spot of rare beauty than in a marsh or on a wild moor, or on bare, stony steeps. But take away the wild scenery, and the Derbyshire wild fernery is not particularly rich above some other counties. Probably it has not yet been fully explored by skilled botanists, and a request is appended to this publication that finders of new or doubtful species would forward them to the editor. The species of ferns recently observed in the county are twenty-two, all of which are elegantly figured in this publication. The writer of the Preface—the only readable portion of the text—takes up a complaint which we brought forward

some time since, respecting the rapacity of fern-collectors. On this point he is eloquently wrathful, as well he may be, for "A bearded dealer in our Northern fern treasures visits the southern counties, to present the bait of a host of captive Woodias, stolen away from every known mountain home, and offered in exchange for the fine varieties of the Lowland." The said bearded dealer, or rather depredator, should be sternly discouraged by all fair fern-growers. Robbing birds' nests is nothing to robbing ferns—in other words, exterminating them, and rendering their former *habitats* a mockery and a delusion and a snare to all after-comers. Let the bearded dealer beware! His beard and his bad deeds will betray him. Let the lovers of ferns band together against the bearded, bad-minded, self-seeking, fern-destroying vagrant. The Rev. Gerard Smith has excommunicated him; it only remains that the laity help the clergy and banish the barterer of stolen ferns from every door! What more can we say to beard this bearded dealer in his den? Only that all proper people will agree with this text of the Rev. Gerard Smith's, "He is practically a transgressor of the great law of love who cares not so much as a fern for posterity."

Iron: its History, Properties and Processes of Manufacture. By William Fairbairn, C.E. (Edinburgh, Black.)—A reprint of the article on this subject in the new edition of the 'Encyclopædia'; also something more than a reprint, for the original article was confessedly written in haste, while the reprint is improved at leisure, and is said to have considerable additions. It appears to be a good summary of what is most interesting to those who trade in iron, and who not only "meddle with cold iron," but also with hot. The only paragraph of general interest we can find is the following, on armour-plated ships:—"In my opinion, the whole navy of Great Britain must be remodelled and rebuilt of iron; and no administration in this country should venture to place another wooden vessel on the stocks. I further believe that it is necessary not only to provide an iron armour, but that the whole structure should be composed of iron, and sheathed with thick plated fenders from the upper deck down to a depth sufficient to protect the ship below the water-line. This, with an iron, bomb-proof upper deck, will render the ship invulnerable to the heaviest shot, and secure in every circumstance in which she can be assailed either by sea or from the land." On such a topic Mr. Fairbairn's opinion ought to have as much weight as the material he works with, for which reason we quote him. It would be as well if the eminent practical men who now write upon their own special subjects would attend a little more to matters of composition and style. There is no occasion why even the subject of iron should be treated in a stiff, hard, and sometimes loose manner. Metal itself can be made ornamental, as we daily see, and sentences are quite as easily welded as iron. Why should badly-welded pieces of iron be so much greater a crime than badly-welded words?

Footprints of the Creator; or, the Asterolepis of Stromness. By Hugh Miller. With Memoir, by Louis Agassiz. (Edinburgh, Black.)—A new edition of one of Hugh Miller's well-known geological works, with some useful additions in the form of a brief Memoir by a brother geologist, and one eminently capable of estimating Miller's ichthyological disquisitions, and also some Prefatory Remarks by Mrs. Miller, which do her much credit, and serve to bring this reprint into somewhat more fitting relation with the present state of knowledge on the questions discussed by her late husband. The last chapter of this volume, which treats eloquently and correctly of 'Final Causes and their bearing on Geologic History,' might well be reprinted as a separate tract. With the addition of a few notes, it would form a popular antidote to some of the ill-grounded notions brought forward in other quarters on the subjects to which it refers. A still more acceptable publication would be a small pocket volume consisting of selections from Hugh Miller's works, and comprising the most graphic and striking passages scattered through his several volumes. Such a little book, if judiciously com-

piled for popular usage, would, we believe, have a large sale, and find readers amongst thousands who are really unable to peruse and estimate aright the detailed disquisitions of the author upon purely palæontological questions. Many of his finest passages, though linked with such details, might be readily extracted, and by the aid of explanatory notes rendered generally intelligible.

Supplementary Chapter to 'Acadian Geology.' By J. W. Dawson, LL.D. (Edinburgh, Oliver & Boyd.)—In a few pages many noteworthy facts relating to the fossils of the carboniferous system are succinctly stated, and occasionally illustrated. The author deserves well of the geology of Nova Scotia in the entire work to which this is a supplement, and has thrown some light on the vegetable origin of coal. He discovered in 1859 a fossil stump abounding with remains of terrestrial animals, in the Joggins mines in Nova Scotia, and he notices the same in this tractate, which will be favourably received by geologists.

The Oyster: Where, How and When to Find, Breed, Cook and Eat It. (Trübner & Co.)—Although oysters themselves may be out of season, this little book about them will continue seasonable. It is entirely for the multitude of oyster-eaters, as the author states:—"I am not writing a book for the man of science; I could not if I would. It is for those who love oysters for the eating, that I have turned author." This is manifest enough by a glance at the pages and at the comic frontispiece. There is enough, however, of information for those who think natural science as hard as an oyster-shell and as valueless.

A Saunter through the West-End. By Leigh Hunt. (Hurst & Blackett.)—An author has every reason to exclaim—looking forward to the time when he shall not be in the flesh—"Save me from my friends!" If any portion of this book has been printed before (and we believe the greater part, if not the whole, has appeared in a periodical), it had been wise not to have printed that part again. If the other pages were left in manuscript, it would only have been a kind and fair thing to Leigh Hunt not to have printed them at all. We see the book announced as the author's "last work"; but there is not a word of introduction to show that it is so; while many a passage tends to prove that it could not have been the *ultimum opus* of the author of so many agreeable and instructive productions.

From London to Nice; a Journey through France, and Winter in the Sunny South. By the Rev. W. B. Dunbar, of Glencairn. (Edinburgh, Edmonston & Douglas; London, Hamilton, Adams & Co.)—Its own title is the most favourable introduction to the public which this harmless, but rapid, little book can, with honesty, command. In the body of his work, Mr. Dunbar proves himself an enthusiastic Protestant, and in his Preface he expresses a "hope that, through the kindness of friends, a sufficient number of copies may be disposed of, not only to defray expenses, but to leave a little margin of profit to assist in the support of a subscription school, recently erected in a remote district of his parish." Mr. Dunbar may, therefore, be credited with modesty and goodness of intention. Still his book is a bad one, and its appearance cannot be defended, save by the casuistry that maintains it to be right to do ill for the sake of achieving good.

Slavery and Secession in America, Historical and Economical. By Thomas Ellison. With Map and Appendices. (Low & Co.)—Written with strong bias in favour of the North, this attempt "to trace the origin and development of the antagonism between the Northern and Southern Sections of the American Republic" is free from the acrimony, but not the narrowness, of party literature. As to his facts, Mr. Ellison is for the most part cautious and accurate; but his conclusions will not gain the adhesion of impartial and competent critics. He has, moreover, selected a bad time for publication, when events are every month laying down new foundations for argument.

British Birds' Eggs and Nests, Popularly Described. By the Rev. J. C. Atkinson. Illustrated. (Routledge & Co.)—A very pleasing little book of its kind. The text is plainly written for uninformed readers, with a particular reference to the

young. It may be read with ease and to advantage by any person. The twelve plates of birds' eggs are neat, and to young collectors will be very attractive. Altogether, this is a good and sufficient shilling's worth of popular ornithology.

Partly with a view to resent what he considers a personal attack, and partly as a means of saving his translation of Homer from oblivion, Prof. Newman has put forth a pamphlet with the title, *Homeric Translation in Theory and Practice: a Reply to Matthew Arnold, Esq.* (Williams & Norgate.)—It is too much taken up with discussions which none but scholars can enter into, and altogether too personal in its tone and character to command the attention of the general public. With Prof. Newman, we think Mr. Arnold mistaken in deciding upon the hexameter as the best metre for representing Homer in English, but we prefer the decasyllabic heroic to that which Prof. Newman has adopted in his translation.—We hold all attempts to teach pronunciation by written precepts to be of little avail, and consequently are not disposed to set a high value upon Mr. J. G. Graham's *Introduction to the Art of Reading, explained in a Series of Instructions and Exercises on English Pronunciation.* (Longman.)—Mr. W. Hughes, after having given in his 'Manual of Geography' what most would consider a sufficient account of Physical Geography, has thought fit to prepare *A Class-Book of Physical Geography.* (Philip & Son), derived in a great measure from 'The Earth and Man,' by Arnold Guyot.—*Studies on the Literature of the Second French Empire since the Coup-d'Etat of the Second of December—[Etudes sur la Littérature, &c.],* by W. Raymond. (Williams & Norgate)—is the substance of a course of lectures, delivered at Berlin to an audience largely composed of ladies; and contains a light, sketchy account of the different departments of French literature and the principal writers in each—the result of several years' residence in the Parisian literary world.

LIST OF NEW BOOKS.

Abbott's Truth through Fiction, 2s. 6d. cl.
Ahn's French Commercial Letter-Writer, 12mo. 4s. 6d. cl.
Ahn's German Commercial Letter-Writer, 12mo. 4s. 6d. cl.
Ashe's (T.) Dryope; and other Poems, 8vo. 6s. cl.
Autobiography of a Joint-Stock Company, ed. Rowland, 8vo. 1s. 6d.
Beasley's Drugist's Receipt Book, 6th edit. 12mo. 6s. cl.
Black's Guides, Kent, 3s. 6d.; Sussex, 3s. 6d. 8vo. cl.
Bohn's English Gentleman's Lib. 'Walpole's Letters,' v. 6, 8vo. 2s.
Bohn's Illust. Lib. 'Marryat's Pirate & Three Others,' post 8vo. 6s.
Bohn's Scientific Lib. 'Hegel's Philosophical Philosophy,' post 8vo. 6s.
Bolton's Fragments of the Great Diamond Set, 3d. edit. 12mo. 1s. 6d. cl.
Bradshaw's Illus. Hand-Book to Switzerland, 1861, 16mo. 5s. cl.
Bunnett's Hidden Power, new edit. 8vo. 5s. cl.
Calendar of State Papers, 'Charles 2nd, 1681-4,' ed. by Green, 12s. cl.
Chambers's Lib. Young People, 3 Series, 'Buck's Hay-Lodge,' 1s. cl.
Circle of the Sciences, new edit. Vol. 7, crown 8vo. 2s. 6d. cl.
Clay (Rev. John), The Prison Chaplain, Memoir, by his Son, 8vo. 15s.
Devey's Protestant's Armour, 2nd edit. 8vo. 3s. 6d. cl.
Do you give it up? Conundrums, Riddles, &c. 12mo. 1s. cl.
Elizabeth's Jewish's Lion, new edit. 8vo. 5s. cl.
Epistles to the Galatians, Ephesians, &c. revised by 4 Clergymen, 3s.
Fawcett's Exposition of the Acts of the Apostles, 3 vols. 8vo. 34s. cl.
Fletcher's Scientific Farming made Easy, 2nd edit. 12mo. 2s. 6d. cl.
Galbraith & Haughton's Mechanics, Key to, by M. Dowell, 8vo. 6s.
Gale's Science Club, 'Hegel's Philosophical Philosophy,' post 8vo. 6s.
Giles's Brewer's Meteorological and Statistical Guide, 8vo. 51s. cl.
Gosse's Romance of Natural History, 3rd edit. post 8vo. 7s. 6d. cl.
Gregg's Mystery of od Finished, 8vo. 12s. 6d. cl.
Hall (Marshall), Memoirs of, by his Widow, 8vo. 14s. cl.
Hardy's Book of Arithmetic, 12mo. 4s. cl.
Hill (Rev. Rowland), Life of, by Siden, 8th edit. 8vo. 5s. cl.
Hoffman's "They that Sow in Tears shall Reap in Joy," new ed. 1s. 6d.
Hutchinson's Guide to Army Examinations, post 8vo. 3s. 6d. cl.
Hymns for the Household of Faith, crown 8vo. 6s. cl.
Jenkins's Last Crusader; or, Life of Cardinal Julian, 8vo. 14s. cl.
Life Work; or, The Link and the Rivet, by L. N. A. 8vo. 3s. 6d.
M'Nicoll's Handbook for Southport, Med. & Gen. 3d. edit. 3s. 6d. cl.
Marryat's King's Own, new edit. 8vo. 3s. 6d. cl.
Notes and Queries, 2d Series, Vol. 3, 4to. 10s. 6d. cl.
Pike's Home Book for Children of all Ages, new ed. 8vo. 2s. cl.
Pugin (A. N. W.) and his Father, Augustus Pugin, by Ferrey, 51s.
Railway Lib. 'Rowcroft's Fanny, the Little Milliner,' 8vo. 3s.
Rodriguez's Virtue of Humility, abridged, by Shipley, 8vo. 3s.
Run and Read Lib. 'Maitland's Watchman,' 1s. 6d. bds.
Shakespeare's Curse, and other Poems, 8vo. 3s. 6d. cl.
Shakespeare, Stratford, ed. Knight, new ed. Vol. 4, 8vo. 3s. 6d. cl.
Semi-Attached Couple, cheap edit. 8vo. 3s. 6d. bds.
Smith's Edwin of Deira, 8vo. 6s. cl.
Sugden's 'The Trials of Portia,' 8d. royal 8vo. 11. 15s. cl.

Watson on Surgical Diseases of the Eye, 2nd edit. 8vo. 14s. cl.
Yelverton's Martyrs to Circumcision, new edit. post 8vo. 3s. bds.
Young Reporter, crown 8vo. 1s. swd.

THE BRITISH MUSEUM DEBATE.

ON Monday, the House of Commons heard the annual comedy of the Debate on the British Museum estimate. Mr. Gregory assailed the plans of Prof. Owen with very little knowledge of their nature, or of the necessities which compel them. Mr. Layard, too, was free in criticism and condemnation. As Mr. Gladstone said, the House,

during this lively debate, was assured by honourable Members that the government of the Museum was bad,—the building bad,—the arrangement of the collection bad,—that the architect knew nothing of his art,—and Mr. Panizzi nothing of his business. It is not worth while to discuss matters of personal taste. It may be that in some men's opinion, Prof. Owen is a scientific dreamer, and Mr. Panizzi an inefficient man of letters. But this is not the opinion of those best able to judge, and it is not an opinion that any one has a right to express in the House of Commons, where the parties cannot be heard, in the absence of all true knowledge of the facts. Mr. Gladstone said, in his reply, that "the Government had for some time been of opinion that the present state of the Museum called for consideration. All were agreed that something ought to be done, but they were not agreed what that something ought to be. The Hon. Member for Southwark said, let there be no patching. But what was meant by patching? If, for example, a body of gentlemen called before them the greatest living naturalist, whose splendid genius and high character ought to have exempted him from being the object of the terms indulged in by the Hon. Member for Galway in speaking of Prof. Owen's plans—if they had heard from that gentleman that a space of five and a half acres for the exhibition of his specimens of natural history were required, and then cut down that five and a half acres to two acres—he should consider that not altogether unlike patching. No doubt the pressure for space acted injuriously and caused great inconvenience. He would admit that it had reached a point that was scarcely compatible with the character and credit of the country. The Government were sensible of the evil, and they were of opinion that the difficulty ought to be faced without 'patching,' but by the adoption of some plan giving large and complete provision for a great length of time. But in order to fulfil this condition it was essential that there should be a separation of the collections, and that this separation should be drawn between the natural and scientific objects, and the objects of Art. The Government had thought it right to do something to elicit the opinion of the House of Commons. The committee had made a Report, but he doubted whether it expressed the general sentiment of the House, and the Government were not prepared to act on that Report. The tendency of the Report was to keep the collections together, yet the committee were not absolutely and uniformly of that opinion, because they thought that the ethnological collection had better be kept elsewhere. Those who were for keeping the collection together might be divided into two classes—those who advocated it on grounds of prudence and expediency, and those who favoured it on grounds of principle. Those who held the latter view maintained that, as the Museum had its origin in a private bequest, it would be to profane the intentions of its founder to separate or remove it. Of that opinion there seemed to be few advocates. The committee had abandoned it, and the Hon. Member for Galway abandoned it, because he proposed to give up the mediæval and ethnographical collections, and would also give up the drawings. That being the state of the case, he thought it was the duty of the Government to consider what course is dictated by prudence, public convenience, and a due regard to public feeling. He agreed with those who entertained the opinion that whatever was done ought to be done in such a manner as that it might not require hereafter to be undone. If, therefore, the Government were not prepared now to adopt the largest plan which had been laid before them, their endeavour must be so to adjust their present measures that they might do nothing which they would have to retract hereafter, or which would cross and traverse public feeling. The Hon. Member for Galway had adverted to some plan which he seemed to think was in contemplation, and which he had aimed at preventing from being carried into effect; but he could assure him the Government, neither alone nor in conjunction with the trustees, sought to do anything without the approval of the House. He must at the same time distinctly tell his hon. friend that the Government will

not found their proceedings on the Report of the Committee, because, although in principle it gave up the idea of uniting, yet it contemplated that which the Government thought was unreasonable and inconvenient—an indefinite extension for an indefinite period on one and the same spot of vast and heterogeneous collections. The buildings connected with the British Museum admitted, he believed, in many parts, of considerable architectural improvement, while there were portions of the ground within the precincts of the present site not occupied which might be occupied for the purposes of the Museum."

As the public will be glad to hear Prof. Owen's statement of what his plans really are, and of the facts which necessitate them, we very willingly allow that gentleman space for his statement in our columns.—

On a National Museum of Natural History.

BY PROF. OWEN.

Alexander the Great devoted large sums of money to the procurement of objects of Natural History and the acquirement of information as to the habits of animals, in order to aid and promote the researches of Aristotle in that branch of Science. But there is no record of any Collection or Museum having been made of the conservable parts of the animals after the Philosopher had used them for his observations and comparisons. The Romans, during the height of their Empire, expended still more enormous treasures in the capture and transport to Italy of the wild beasts of their conquered provinces; but they were solely for the service of the Amphitheatre. The Rhinoceros, the Hippopotamus, the Giraffe, the Crocodile, the Lion, the Tiger, the European Bison, with many other rare animals, some of which, as the Gigantic Wild Ox of Hyrcania, are now extinct, were brought to Rome, and there publicly exhibited. They might be seen by the Philosopher, the Historian, the Poet and the Satirist; but they were seen only to be baited, and slaughtered in cruel games, for the gratification of the depraved tastes of an enslaved and voluptuous people. Many centuries elapsed ere the nations of Europe began again to be familiar with the forms of the rarer animals of remote regions; and we may regard it as one of the beneficial results of the great moral revolution which had been effected during that interval, that Natural History objects began to be collected through other and higher motives than those which stimulated the Pagans of Ancient Rome to excel in the exhibitions of the Circus.

The Sophists and Epicureans of the Empire must have had ample opportunities, during more than 400 years, of making observations on the form and organization of foreign animals; but it seems that these animals, after being slaughtered, were put to no further use.

We may justly rejoice that, in these later times, worthier aims have stimulated States and Communities to bring together collections of objects from the different kingdoms of Nature, and to arrange them in orderly series according to their natural affinities, in their metropolitan Museums, with a view to minister to the instruction, to the advancement of science and of taste, to the elevation of thought, and to the innocent pleasures of the peoples.

Every nation of Christian Europe now possesses its National Museum of Natural History, aiming or professing to be a more or less complete epitome of the three kingdoms of Nature—Animals, Plants and Minerals. Such is the extent and scope of the great Natural History Museum or establishment at the Jardin des Plantes, Paris; and such also, in its fundamentals, is the Natural History Division of the British Museum. Here the Natural History Departments are four in number:—one for Zoology, comprising the prepared specimens and skeletons of existing species of animals; one for Geology, at present restricted to the exhibition of the remains of extinct organized beings; a third for Botany, and a fourth for Mineralogy; so that there needs only a co-ordinate or consistently proportional display of the several classes of objects in the four great Departments of this comprehen-

sive design, to realize our ideal of the scope of a National Museum of Natural History.

The Department of Zoology in such a Museum should be so located in reference to the Department of Paleontology as to afford the easiest access from the specimens of existing to those of extinct species, supposing such Departments to continue to be, as they are in all metropolitan Museums at the present day, distinct. As a general rule, the fossil specimens are preserved in the Galleries of Geology and Mineralogy; and, no doubt, the illustration of the characters and relations of the earth's strata would be impossible without their characteristic fossils. Prof. Agassiz, however, in his lucid statement of the principles on which he is arranging the Museum of Natural History of the State of Massachusetts, says:—"This should not be." "Every year makes it more urgent that the collections of fossils should be combined with those of the animals now in existence, as they cannot be accurately identified without a direct comparison with one another. Some of the most mistaken views now prevailing in our Science would long ago have been abandoned, did the great Museums now existing contain such combined collections of fossil and living animals."

It is a fortunate circumstance that the illustrations of extinct species are commonly obtainable in greater numbers than those of existing species. The remains of countless generations of one and the same species are often accumulated in limited localities of the sedimentary rocks. Duplicate specimens of fossils are, therefore, more common than of existing animals. It would be practicable to combine with the recent Natural History a fully illustrative series of the extinct forms of the different classes, and at the same time to associate with the rock-specimens, in the Department of Geology, all the most characteristic fossils of each stratum and formation. A National Museum of Natural History should exhibit both these teachings and relations of fossil organic remains. But convenience of consultation and comparison will doubtless retain the distinct series of Paleontology in all public Museums.

The Department of Zoology, considered in its ordinary restricted application to living nature, should illustrate both the outward form and inward structure of its subjects. The art of Taxidermy preserves the integument, so as to give the outward shape and coverings of mammals, birds, reptiles, fishes, insects, Crustacea, and most Echinoderms. In a great proportion of the molluscous classes, the external defensive shell is all that is commonly seen of the living animal; and, consequently, the shell itself represents in a great measure the outward form of the animal. Where the soft parts of the body are habitually protruded from the shell in the ordinary living actions, they can be closely imitated in coloured wax models. Such models, or the Mollusks themselves, in preserving liquor, represent the outward forms of the species in this great department of Invertebrate animals.

Most of the Arachnida, the larvae of the Insects, many Crustacea, some of the Cirripedia, all the Annelida and Entozoa, can only be exhibited either preserved in liquor or by means of models.

In the Radiated Classes the testa, with its appendages, serves, in most instances, to convey a sufficient idea of the external form of the animal, as in the Sea-urchin and Star-fish orders. The corals, madrepores, and other hard parts of the Polypes, are the mere skeletons of the animals; these masses of carbonate of lime are, for the most part, internal; and as the delicate flesh shrinks in most preserving liquors, and loses colour in all, a true idea of these beautiful composite marine animals, with the polype mouths expanded like the petals of a flower, can only be given by coloured models. The art of the colourist and modeller is still more essential to show the outward characters of the lovely hyaline Medusæ, Jelly-fish, and other forms of the floating Acalephæ,—for only the form, and that commonly contracted, can be exhibited in specimens preserved in liquor.

The adjustment of the exquisitely sculptured silicious shells of microscopic organisms to microscopes adapted to afford the casual visitor to a

public Museum the opportunity of contemplating them, must be restricted to a few of the most striking examples. Enlarged coloured drawings, with the degree of the magnifying power noted, must serve for the majority of the species. A special apartment, with an attendant accustomed to the use of the microscope, would be requisite in the public Museum in which the general view of living Nature was completed by a demonstration of the forms of the Infusorial and other Animacules.

The most obvious and simple aim of the Zoological Department of a National Museum of Natural History is to exhibit the various outward forms and characters of the Animal Kingdom, which, as we have just seen, requires the labours of skilled artists in various costly procedures. But the first principle in the arrangement and allocation of such objects is, that each class of animals should receive its due proportional amount of elucidation, to the extent which the acquired specimens at the time may admit, and according to the degree in which the principle of variety is manifested in the class.

A Museum of Nature does not aim, like one of Art, merely to charm the eye and gratify or improve the sense of beauty and of grace. Many animal forms do indeed accord with our apprehension of the Beautiful: some classes more especially, as, e.g., that of Birds, also the pearly shells, in which the Mollusks "attend soft nutriment," the diversely ramified or delicately sculptured corals, are all beautiful; and these accordingly, are the exemplifications of Animated Nature, which are the first to be collected, and are usually the most freely illustrated in Museums. But there are forms of animals which excite wonder by their bulk and power, which surprise by their strangeness and oddity, which repel by their ugliness, or excite an instinctive feeling of horror and disgust. How soon the latter emotions subside as the adaptation of form and structure to the habits and exigencies of the species become understood, the observant naturalist can readily testify; and it would be difficult, indeed, to say what exceptional proportion of the animal kingdom may not possess that element of beauty which rests in the appreciation and contemplation of the perfect fitness of the thing to its function. As, however, the purpose of a Museum of Natural History is to set forth the extent and variety of the Creative Power, with the sole rational aim of imparting and diffusing that knowledge which begets the right spirit in which all Nature should be viewed, there ought to be no partiality for any particular class merely on account of that catching quality which blinds the amorous youth to every object, save the mistress of his fancy.

What, then, is needed for a co-equal or justly proportional representation of all the classes of animals to the extent in which a nation may possess, or have opportunities to acquire, the specimens of them? First, and chiefest, adequate exhibition space. How is this to be estimated? First, by the number of known species of the class; secondly, by the extent of exhibition space occupied by the proportion of the class which may be properly exhibited; thirdly, by the proportion of examples obtained, but not exhibited; fourthly, by the ratio at which such specimens have accrued in a given number of years; fifthly, by the circumstances or conditions on which the ratio of future increase may be computed.

Let me exemplify the working of this problem by the class Mammalia.

In the year 1855, the number of known, named and more or less adequately described, species of the Mammalian Class was estimated at 2,000; it now exceeds 2,500. In the British Museum, there are about 1,100 stuffed specimens of the class Mammalia; the Giraffe being the largest, and a Walrus of fourteen feet in length occupying the greatest space as a single specimen. The space assigned to this class is equivalent to a gallery of 220 feet in length. In this space, as is notorious, the specimens are packed as closely as they can be stored, often three and four deep in the cases. Their arrangement in single series, so as to give every requisite facility to the observer, would require a gallery of about 450 feet.

The Mammalian organization is that under which the individual animal is enabled to attain the

greatest bulk; this striking feature of certain of its members is one of the peculiarities of the class. For scientific purposes size needs only to be accurately measured and recorded; but a Museum destined to gratify the curiosity of the people, and afford them subjects of rational contemplation, ought to exhibit the maximum of the characters afforded by the dimensions of certain species of a class which is peculiar for the vast bulk of such species. The largest specimen of a whale that can be procured ought, therefore, to be exhibited in a National Museum.

One specimen, at least, out of the number of genera and species of the Whale-kind, should be prepared as an example of the power of the Creator as manifested by the hugeness of the creature. I have visited museums in which there were preserved as many of the smaller Cetacea, stuffed, as would make their collective skins more than equal in extent to that of a Mysticete whale of ninety feet in length, and they had been so prepared as to be free from offensive odour. The same care and skill would, I apprehend, be attended with the same result, in a properly stuffed whale. There is another consideration which impels the naturalist to urge the acquisition, more especially of a specimen of the Mysticete or Great Whalebone Whale, while it may yet be possible to procure it, viz., the fact of the greatly and rapidly diminished numbers of this species, and the probability of its utter extinction at no very remote period.

The Mysticete Whale is confined to the seas of the Northern Hemisphere; the equatorial mass of tepid water is an effectual barrier to its migration southward. The peculiar nature of its food—small floating mollusks—further restrict it to high northern latitudes. The Mysticete produces but one at a birth, and that at an interval, as is supposed, of about three years, the gestation extending probably over one year. This is the whale which, on account of the quantity and quality of the blubber, and the large size of the "whalebone" substitutes for teeth, has been most sought after by the whale-fishers. Modern inventions, such as the screw propeller, improved adjustment of fire-arms to harpoons, explosive shells, and other effective methods of capture and slaughter, have rapidly thinned the numbers of this huge, but timid, and almost harmless animal. Latitudes in which, a century ago, the whale-ships reckoned upon, and usually made, full cargoes, are now traversed by them as being wholly barren of sport, on their way to the extreme northern inlets, at once the discovery and chief practical remunerative results of our late arctic voyages. Here only is there now the chance of seeing the spouting of the "Right Whale." The Natural History Museum of that nation which has invested most capital, and received the largest returns for it in the slaughter of the *Balaena Mysticetus*, might be expected to be that in which, when the animal itself had utterly passed away, there might remain as a subject of wonder, contemplation and study, the sole and unique taxidermal evidence of this marvel of creation.

St. Petersburg justly boasts of the stuffed skin of its unique Mammoth.—Madrid was famous for its once unique Megatherium. Any capital in Europe would be eagerly visited by the Naturalist if a single specimen of the extinct Dodo were preserved in its National Museum. A dried head at Oxford, a dried foot in the British Museum, are the sole examples of the skin of this strange bird that now exist. If the wealthiest maritime and commercial country should not think it worth while to preserve one specimen of the Right Whale before the species becomes mere matter of history, it will be amenable to the same reflection which is cast upon the Dutch, who, intent only on killing the Dodo to victual their ships as they touched at their "Prince Maurice's Island," en route to Batavia, finally extirpated the species, without caring to preserve a single specimen in their Museums for the behoof of Natural Science.

The diversity of structure shown in the different cetaceous genera,—*Balaena*, *Baleoptera*, *Physeter*, *Hyperoodon*, &c.,—are best exemplified in their skeletons. But, by reason of their size, such can only be exhibited in a National Museum.

Here only can an intelligent public expect the means of contemplating the characters and structures of the strangest as well as hugest of animals,—the most seldom seen by reason of their ocean haunts,—air-breathers, yet living in water,—hot-blooded, though ever surrounded by a rapidly cooling medium,—the most closely allied to man's own class in all the essential parts of their organization,—the most closely resembling the cold-blooded fishes in shape,—a comparatively recent development in the series of life-forms that have succeeded one another on our planet, and the supersedes of the great Sea-lizards in their peculiar office in the ocean police. Space is the first essential towards fulfilling this exigency, and adding this great and striking and instructive feature to a National Museum of Natural History.

But some of the land members, as well as the sea members, of the Mammalian class, exemplify the characteristic of hugeness of bulk in the individual.

The Elephant of Africa and the Elephant of Asia will immediately occur to mind. Their chief characteristic is their size; and consequently the largest examples should be selected to exemplify the species in a public Museum. To such specimens the physiological naturalist would point as exhibiting the maximum of mass that can be supported and moved in air, and upon dry land, by a living animal. But for this purpose, it may be said that one Elephant will suffice; and some naturalists urge that it is only necessary to exhibit the "type-form" of each genus or family. But they do not tell us what they mean by their "type-form." It is a metaphysical term, which implies that the Creative Force had a guiding pattern for the construction of all the varying or divergent forms in each genus or family. The idea is entirely devoid of proof; and those who are loudest in advocating the restriction of exhibited specimens to "types" have contributed least to lighten the difficulties of the practical curator in making the selection. Where, for instance, will he find the principle demonstrated and accepted in Zoological Science which can guide him in his selection of the type species of the genus *Elephas*?

By one authority he may be told, the "type-form" is that from which the various species have diverged, and that it will, accordingly, be recognized in the species which retains most of the general structure of the wider group of which the genus in question is a specialized member. According to this definition, the Museum Arranger would see, in the coarser divisions of the grinding teeth of the African Elephant, a nearer approach to that character of perissodactyle dentition, as exemplified in the tapirs, to which the transition is effected by the progressive simplification of the grinding surface of the teeth in the extinct *Mastodons* and *Dinotheres*.

But a second authority may urge that the type-form of any given genus is that which exhibits the generic characters in their fullest perfection, in their highest state of efficiency for the part assigned to the members of the genus in Life's great drama. Thus the Feline with the sharpest carnassial tooth and the most retractile claw is said to be a more typical carnivore than that which, retaining more of the common ferine characters, is more closely allied to conterminous, musteline or viverrine genera.

On this idea of a type the Elephant of Asia would be selected on account of the greater degree of the peculiar elephantine complexity of teeth which it exhibits, as contrasted with the African species.

My idea of the scope and appliances of a National Museum of Natural History leads me to view it as the place where the naturalist would find the readiest means of comparing the most gigantic quadrupeds of Africa and Asia, not only in regard to the structure of their molar teeth, but as to the proportion of their height to breadth, in the shape of the head, in the relative size of the ears (which differs extraordinarily in the two species in question), in the shape and proportion of the tusks, and in the degree in which those ivory weapons are developed in the male and female of each species. The means of affording these subjects of contemplation and comparison involve the neces-

sity of having a specimen of the full-grown male and female of both the African and Asiatic kinds of Elephant.

The relations of Zoology to other sciences widen year by year. They have, of late, become most interesting in reference to the geographical changes which the earth has undergone. What can be more exciting to the sober naturalist than the quest of evidences that such and such scattered islands are the mountain-tops of a continuous continent now submerged, and the acquisition of proof that such submerged continent belonged to a life-period distinct from that of the uprisen one which lies nearer to the still unsubmerged mountains of the former continent! Now, Elephants still exist not only on the continent of Asia, as in India and Siam, but also in the neighbouring islands of Ceylon and Sumatra.

Evidence has been creeping in of late indicating or testifying that the continental Asiatic Elephant is distinct from the insular one; that the Siamese and Sumatran elephants are not the same species; that the Sumatran agrees specifically with the Cingalese elephant, and that the Siamese agrees with the Indian one. How satisfactory it would be for naturalists to be able to settle these questions by comparison of authenticated specimens of the Elephants of India, Siam, Sumatra and Ceylon! Who knows what new light might be thereby thrown on the past and present geography of South Asia; on the geological dynamics that have caused the present arrangement of dry land and sea; and even on the question of the origin of races and of species!

With these convictions of the important appliances of a National Museum of Natural History, could silence, in the naturalist moved thereby, be blameless as to its requirements? Is it not rather a bounden duty to urge the imperative need of space? In addition to the specimens in the gallery of the Stuffed Mammalia, the Osteological Gallery should contain the skeletons of the full-grown males of both the Asiatic and African species: the skull and characteristic bones of both male and female, with the dentition, in its different phases, of every known species or variety of elephant should also be preserved, for comparison with each other and with fossils. There could be no great difficulty in obtaining the specimens, if only space were provided for their exhibition.

Next in size in the Mammalian class come the Rhinoceroses: like the Elephants, they are now much reduced in number and restricted in place as compared with former geological periods.

Four kinds of Rhinoceros have been specified in Africa, two of the white kind and two of the black kind; all of these possess two horns. There is also a two-horned Rhinoceros in Sumatra, and the Rhinoceros of continental Asia is one-horned, as is that of the island of Java. Of these seven species, which, it may be asked, should be selected as the type Rhinoceros? Here the same difficulty meets the practical Museum officer as in the case of the Elephants. The Asiatic Rhinoceroses adhere more closely by their dentition to the general type, the African kinds depart from it by the total suppression of the incisive teeth. In this respect and in their two horns, both of which are single, symmetrical and medial, the African may be said to be most Rhinocerotie: but the Asiatic species is most so in regard to the thickness and peculiar folds of its tuberosus integument. How, then, can a single typical example be selected from this series? It is less difficult to choose the species that might be represented by characteristic parts preserved in store; that is to say, one would select one of the two white African kinds and one of the two black African kinds of Rhinoceros; but five out of the seven known Rhinoceroses ought to be represented by stuffed examples of full-grown males; with the dried heads of the full-grown females, to show the sexual character of the horns.

The two-horned Rhinoceros of Sumatra offers, of all living Rhinoceroses, the nearest resemblance to certain fossil kinds found in Europe. When half-grown this Rhinoceros retains a conspicuous coat of short, straight, bristly hair. It is generally known that one, at least, of the extinct European Rhinoceroses was covered with hair when full-

grown. Such are the interesting facts and relations that make it desirable to preserve and exhibit specimens of the young as well as old individuals of some of the largest species of quadrupeds. What I have said of the Rhinoceros applies to the Elephant. Bishop Heber's first announcement of the young hairy Elephant which he met with in the Himalaya Mountains excited much surprise. This character, transitional in the modern Elephant, was persistent in the Mammoth, or Northern European Asiatic Elephant.

Let me next refer to the Tapirs. One species is South American; another is Sumatran: they differ much in colour. Which shall be selected for exhibition as the type-Tapir? With every desire to carry into practice the economical recommendation to afford exhibition-space only to the type-form of a genus, the Custodian of a National Zoology has to seek for light to direct his choice in this matter. For, say that the American Tapir departs least from the general Pachydermal type of colour, the parti-coat of the Sumatran species might be contended to be the most strictly tapirine peculiarity. But, if votes prevailed for the American species, the question would next arise, Shall we exhibit the Tapir of the plains, or the Tapir of the mountains? For it is held, that the *Tapirus Andium* is a distinct species from the *Tapirus Americanus*. Obviously, a National Museum of Natural History is the place where Zoologists should find the means of determining or satisfying themselves as to such questions.

It is easy for the book-naturalist to rule that only the type-form of the genus need be exhibited in a public Museum. But even were all agreed as to the type-Rhinoceros, type-Elephant, or type-Tapir, the practical zoologist would testify that it is easier to make the required observations and comparisons on the skins of great Pachyderms when stuffed and set up, than to have to open the stiff folds of a flattened and close-packed hide, and pull the bulky and cumbersome mass about, to bring into view this or that particular character.

A singular and interesting modification of the Mammalian type for sea-life, is that manifested by the Dugongs and Manatees—the mermen and mermaids of mariners. The Manatees are from fifteen to twenty feet in length; species haunt the estuaries and large rivers of central and intertropical South America, and also those of both the eastern and western sides of tropical Africa. The Dugongs, from twelve to sixteen feet in length, have been found in the Red Sea, the Malayan Archipelago and the northern coasts of Australia.

Transmutationists see in these animals special evidences of the course of change, either from impeded to quadruped, or from quadruped to impeded. Only the powers and resources of a great National Museum of Natural History can afford the philosophical zoologist the means of comparing and tracing the characters which, on one hypothesis, are the marks of original specific distinction, formulated by the terms *Halicore tabernaculum*, *Halicore Australis*, *Halicore Dugong*, *Malayanus*, &c.; or which, on another hypothesis, may be the indications of the direction, whether ascensive or retrograde, of the modifications of structure, that may be slowly progressing, in long course of time, to lead to what are called new specific forms.

The slow progress of the science of Zoology is partly or greatly due to the inadequacy of the means of the private individual, or even of an association of scientific zoologists, to acquire, preserve, display and arrange the specimens, which are the necessary elements of the problems in question. The series of the Sirenia, like the series of Elephants, Rhinoceroses, Tapirs and Cetacea, require, as the essential preliminary condition, exhibition-space—adequate exhibition-space—such space as a Museum of Natural History professing to be national ought to cover, and can alone be expected to possess.

I will only cite one other group of Mammalia, which bears upon the question of space in a National Museum: it is that group which, subsisting exclusively on marine animals, offers a most interesting intermediate modification between the fish-like Cetacea and the carnivorous quadruped.

Species of the group to which I allude, viz. the "Pinnigrade Carnivora," Phocidae, or Seal tribe, have attracted, since the diminution of the Whale tribe, almost as much attention from the commercial collector of animal products as the whale itself.

Seals of the kind called "Elephant" (*Cystophora proboscidea*), frequenting remote and desolate islands on the great Southern Ocean, attain the length of thirty feet; and, seen skulking their rapid course by alternate strokes of the terminal propeller, formed by their connate hind-flippers and tail, have excited the idea of the great "sea-serpent," by reason of the long track or "wake" left on the broad billows they have cut through. These great seals are slaughtered annually, chiefly for their blubber, and in such numbers as, with their restricted localities and closer dependence on dry land than confines the whales, foreshows a speedy extinction of the species. They are elephantine, not only by their bulk, but by the proboscidean prolongation of the snout, at least in the adult male. Another huge species of seal resembles the elephant in the ivory-like tusks that descend from the upper jaw. One of these "Walrus" is exhibited, stuffed, in our British Museum; it occupies a superficial space of sixteen feet by ten feet; but larger examples are recorded to have been shot by voyagers to those remote Arctic regions to which the walrus is confined. The number of species of seal now registered in zoological works is upwards of fifty; their diversity of form and structure has led to their partition into five well-marked families. Exercising a proper discretion in the selection of specimens for exhibition, they would range along about 100 feet of the Mammalian gallery.

In the exercise of this discretion the number of species represented by stuffed specimens, in comparison with those represented by dried skins kept in boxes, becomes less as the species diminish in size. The Rodentia, for example, is the order of Mammalia containing the most numerous as well as the smallest species. A larger proportion of the Mouse family, *e.g.*, and also of the Shrew family, may be preserved in store, with sufficient exhibition of the modifications of form and character, than would be proper with regard to the groups of few and large species of Mammalia.

Accordingly, the Museum Curator and Arranger finds that, in adapting the selective principle to the limits suited to the aims and functions of a Public Collection, he by no means thereby saves space in the ratio of the numbers of the class that he may reserve in store.

I believe that enough has been adduced from the Mammalian class to illustrate the conditions on which must be founded calculations as to the extent of exhibition-space required for the selected specimens from that class. Let me again refer to the ratio at which the zoologist's knowledge of the class has proceeded of late years; viz. from, say 1,350 species in 1830, to 2,500 in 1860. In one order, *e.g.* Marsupialia, the increase has been, from 50 species, recorded in 1830, to 350 species, in 1860. We should greatly over-estimate our present knowledge were we to rest upon it a conclusion that there remained but very few more forms of Mammalia to provide room for in our museums. Look, for example, at the recent unexpected augmentation of the species of the Quadrumanous order, by the researches and acquisitions made by Dr. Savage and M. Du Chaillu, in a limited, but previously unexplored tract of Tropical Africa—species including the largest as well as the most highly-organized forms of the order that comes nearest to Man!

(The *Athenæum* of next week will contain the sequel of Prof. Owen's important communication.)

EXPLORING EXPEDITION FROM CHINA TO INDIA.

WE are favoured with the following communication from Capt. Blakiston:—

Kivel-chin, Yangtse River, Province of Szechuan, April 12, 1861.

My dear —,—I take a chance opportunity, and a rather uncertain one, to let you know how we have got along.

My last closed at Yo-chin, where the naval expedition left us. Thence we travelled by river

junk through a flat and uninteresting country to Kinchou, which you may observe on the map. An immense extent of country must be below the high level of the water during summer, but is preserved from inundation by embankments—enormous works, apparently of very old date.

At some little distance above Kinchou the country became hilly, and even mountainous, and the scenery on the river was very fine, until we reached Ichang; this you will see marked on the map as Ylin. It is 364 geographical miles above Hankin, our uppermost open port, and 948 from Shanghai; in round numbers, 1,100 English miles up the Yangtse-Kiang.

I have worked hard at sketching in the river, and obtaining celestial observations, so as to be able to produce a pretty fair map of the river. But I have not finished working it up yet, or I should send a copy. I may possibly do so if I get an opportunity.

At Ichang the river suddenly changes its nature; from a quiet flowing and broad stream, it narrows to less than half its width, and, with a strong current, sweeps under magnificent cliffs, whirling in eddies round projecting rocks. Rapids occur a few miles above this, and although it may be different in summer, when the water is high, they are sufficient to arrest the progress of steamers at this time of year. This mountainous district continues into the province of Szechuan, and, although about 83 miles above Ichang, we are still in the midst of mountains. Coal exists in these parts, and is worked.

We start to-morrow for a place called Wan, some fifty miles by water, but whether we shall proceed thence by land, or stick to the river, depends on circumstances. We shall make for Ching-te, the capital of this province.

We find the Chinese most good-natured people, and have had no differences with any of them, the only inconvenience being the way we are crowded by the astonished natives when we are at a town or village. Our food is usually rice, fowls, eggs, and tea. Travelling by boats is comparatively easy work, and we get on very well. We have no difficulties put in our way by the mandarins as yet.

This is the only letter I have time to write to England; I shall, therefore, be glad if you will inform my friends of our successful progress.

OUR WEEKLY GOSSIP.

THE Trustees of the British Museum, at their last meeting, purchased a selection of the specimens in the collection brought from the Gaboon by M. Du Chaillu. It includes the great male Gorilla, now displayed in the Mammalian Gallery; the skins of the female and young Gorilla, of the Kooloo Kamba, and the bald variety of Chimpanzee, with their skeletons; the skin and skeletons of male, female, and young of the Manatee; the new genus of animal called *Potamogale* by M. Du Chaillu and *Mythornys* by Dr. Gray; also a collection of birds selected by Mr. R. Gray, and a few rare Reptiles.

Mr. Stirling suggests that Lord Palmerston should appoint two or three eminent men of letters as a council of advice in his distribution of the Literary Civil List. Such a council would, indeed, prevent a First Lord of the Treasury from making gross mistakes. But the game is not worth the candle. Gross mistakes are extremely rare, and it is useless to set two or three eminent men of letters to guard against such a case as that of Close. Lord Palmerston, we feel sure, will not again pension an unknown man on the recommendation of his unknown friends. It would be a better service if Mr. Stirling, Mr. Milnes, Mr. Gladstone, and others who in the House of Commons have a right to speak in the name of letters, would use such influence as they possess in inducing the Government to adopt sounder principles in dealing with the fund. Lord Palmerston speaks of alleviating much distress, and compares his action with that of the Committee of the Literary Fund. Sir Robert Peel had a very different notion of his duty in distributing these national awards, and we cannot but believe that he was right in his view. Sir Robert treated the Civil List as a sum set apart by Parliament for the benefit of learning

and genius, and he bestowed each pension in the spirit of an honorarium. Lord Aberdeen introduced the practice of treating the fund as a charity and of bestowing the pensions in the character of an alms. Under the old plan, the pension was received as a national recognition and reward. Southey, Moore, Wordsworth, and Lady Morgan were the recipients. Under a system which looked to public service as the sole justification of the gift, Mr. Close would have had no more hope of obtaining a literary pension than a Knighthood of the Bath.

A quaint and Hogarth-like picture of Whitfield preaching to a village congregation has been added to the National Portrait Gallery. The painter is J. Woolaston, and the picture is well-known by Faber's engraving from it. This acquisition shows that the Trustees are disposed to admit pictorial compositions as well as the more cut and dried single figures.

The Council of the Institution of Civil Engineers has fixed upon its list of subjects for premiums during the Session 1861-62. The list contains fifty-six subjects in engineering. An innovation on the usual practice will be introduced: that of pecuniary awards not exceeding in each case twenty-five guineas, in addition to the honorary premiums, in a few special and important cases. Five such cases are named in the list:— 'On Reclaiming Land from Seas and Estuaries;' 'Accounts of existing Water-works, showing the Methods of Supply, the Distribution throughout the Streets of Towns, and the general practical results;' 'On the results of the Use of Tubular Boilers, and of Steam at an increased pressure, for Marine Engines, noticing particularly the difference in weight and in speed, in proportion to the Horse Power and the Tonnage;' 'On the Form and Materials for Floating Batteries and Iron-plated Ships;' and 'Railway Accidents—their causes and means of prevention, showing the bearing which existing legislation has upon them.'

The Council of the Royal Dublin Society have recommended the Society at large to throw open their beautiful Botanical Gardens on Sunday. We cannot suppose that the Society will refuse to endorse this recommendation, particularly as the large annual parliamentary grant of 6,500*l.* will only be made on condition that the gardens are put on the same footing as those at Kew.

Mrs. Stirling, the popular actress, has recently been robbed of the whole of her personal jewelry—a serious loss to any lady, and most of all to one who has to appear before the public in many characters. What is the Countess without her bracelets? Who will believe in a theatrical Queen shorn of her pearls and diamonds? Even the heroine of domestic drama will be thought less a heroine without her rings and her necklace. Under the circumstances of this loss, a Committee of three gentlemen, Messrs. Tom Taylor, Charles Mauby, and Mark Lemon, have arranged an appeal in the name of her many friends, to those best of friends, the lovers of genuine comedy and personal worth. A benefit to Mrs. Stirling will be given at Campden House, on Saturday, the 3rd of August, when 'A Lesson for Life' and 'Nine Points of the Law' will be acted by members of the Civil Service Volunteers, including Capt. Tom Taylor, assisted by Mrs. Stirling and the Misses Kate and Ellen Terry. We wish the enterprise every success.

Propositions are being circulated by a Committee, consisting, amongst others, of the Dean of Christ Church and Dr. Acland, Messrs. Holman Hunt, G. Richmond, and G. E. Street, which has been formed for obtaining subscriptions for a memorial to the late Benjamin Woodward, architect, of Oxford and Dublin. The circular speaks of the deceased as one of the gentlest and most appreciative mind, which, while it elevated his tastes and exalted his feelings, made him almost a recluse in society and greatly restricted the number of his intimate friendships. Of his singular genius it is superfluous to speak. The plan for the memorial is somewhat a novel one, comprising, first, a biographical and critical sketch of his life and works; secondly, a series of photographic illustrations of his principal public and private works, to accom-

pany the above-named sketch, and to include both general views of elevations, and also numerous details, such as roofs, windows, doors, and interiors; thirdly, a bust, in marble, to be presented to the Oxford New Museum. It may be well to state that Mr. Woodward was the architect of the Crown Fire Office in Blackfriars, lately put forwards in the House of Commons, and rightly so, as a fine example of Modern Gothic Art. He also held a high position at the competition for the new Government Offices.

Mr. Woodin has added to his entertainment an imitation of M. Fechter in 'Hamlet.' The part chosen is the soliloquy at the end of the second act. Mr. Woodin's imitation is remarkably exact. It gives the manner, the tone and the gesture, and brings out the beauties without exaggerating in the slightest degree the faults of the actor. So satisfactory an imitation we have rarely witnessed.

The British Medical Association held its Twenty-Ninth Annual Meeting, at Canterbury, on Tuesday, Wednesday and Thursday last. Dr. Lochée, of Canterbury, was present. The Meetings took place in St. George's Hall. The addresses in medicine and surgery were read by Dr. Markham, of London, and Mr. Hoffmann, of Margate. The numerous objects of ecclesiastical interest in the city were freely opened to the inspection of the Members of the Association. The very Rev. the Dean accompanied a party round the Cathedral on Wednesday afternoon, and entertained the whole Association at a *soirée* in the evening. Numerous points of professional interest were discussed at the Meetings, and the whole proceedings concluded with the customary dinner.

We should not be doing our duty as chroniclers of Arctic adventure if we omitted recording that Capt. Parker Snow's appeals to the public for subscriptions to enable him to equip another expedition to search for relics of the Franklin Expedition have been partially successful. Capt. Snow has nearly fitted out a small ship, *The Endeavour*, which now lies in the Tyne. But money is still wanting to complete the undertaking, and should the necessary funds, about 200*l.*, as we understand, not be forthcoming within a fortnight, Capt. Snow will, we believe and trust, abandon the enterprise this year. For, while willingly conceding to Capt. Snow high praise for the energy and heroism which he has displayed in former Arctic Expeditions, we hold that the work of searching for the Franklin Expedition has been done, and that it would be both rash and wrong to imperil more lives in a small and inefficiently equipped expedition.

Those who are unwilling to give up the battle of books for the City of London may strengthen their arguments for a Free City Library by the following figures. During the past year there were 3,000 visitors daily to the Manchester Free Library and News Rooms. The Salford Library issued 141,721 books, and that in Great Smith Street, Westminster, 51,271.

The Members of the Archaeological Institute are at present holding their Annual Meeting at Peterborough, where a rich store of antiquarian subjects for investigation and the friendly disposition of the local authorities seem to afford abundant occupation for the visitors. In the Temporary Museum formed in the Training School near the Cathedral, Mr. Albert Way has revived his favourite scheme of collecting all the known and presumed portraits of Mary Queen of Scots. In this collection he has improved somewhat on the Exhibition in Suffolk Street, held four years ago, by the admission of portraits of Mary of Guise, her mother. By this step, and on comparing the various pictures, it appears tolerably certain that many portraits called Mary Stuart do in reality represent Mary of Guise, her mother. Such is the case with the portrait of Mary in white mourning dress, at Hampton Court, which belonged to King Charles the First, and is mentioned in the Catalogue of his pictures. A valuable, but much ruined, portrait of Mary Stuart has been found in the collection of Col. Meyrick. It is painted in oil, nearly life-size, and corresponds exactly with the small miniature in the royal collection, which represents her at an early period of life placing a ring on one of her fingers. It is impossible at

present to specify more than the principal contributors to this very varied collection of portraits, which, although exhibiting the features of so many different persons, all centre in one name. Her Majesty the Queen contributes the small miniature above referred to; the well-known miniature which belonged to Dr. Mead, and which Houbraken engraved in the 'Illustrious Heads'; together with two other miniatures from the collection at Windsor; and the painting of the Queen of Scots in white mourning from Hampton Court Palace. Three miniatures from Blenheim, lent by the Duke of Marlborough; the full-length picture signed 'P. OVDREY,' from Hardwick, the property of the Duke of Devonshire. Mr. Beriah Botfield, M.P., Dr. Wellesley, the Duke of Buccleuch, and the Duke of Hamilton, have already contributed various portraits of the unfortunate Queen; but we must reserve a more particular and critical notice for our columns next week, when several additional contributions will have been received.

Mr. Charles Wells, whose interesting notes on an Arab newspaper appeared in last week's *Athenæum*, sends us a specimen of Turkish poetry, which occurs in a Turkish romance. The translation is almost literal:—

And, lo! a maiden of heavenly face
From head to foot full of grace,
Tall of stature, light was she,
Like unto the cypress tree.

In every age hath woman been
Cause of madness and of spleen.
So soon, O soon, was Hassan seen
Prostrate 'fore this winning queen.

The torrent of love where dashes he?
He sweeps o'er the walls of philosophy,
The bulwark of sense must down needs be,
For in are rushing the waves of love's sea.

A few notes of the life's occurrences of the late Mrs. Wells may be interesting to our readers, and to those who have recognized in her works the true artistic inspiration. Joanna Mary Boyce was born in London in 1831. She commenced her studies at Mr. Carey's Academy, in Bloomsbury, and pursued them at Mr. Leigh's Gallery, in Newman Street, and was indefatigable in studying at home after hours. At this time she became much impressed with the spirit of the movement in Art, popularly styled Pre-Raphaelite, and by Mr. Ruskin's writings. Accordingly, we find in her earlier productions much of the juvenility and not a little of the bizarre earnestness which distinguished the school in question. As some of the members themselves have found in more developed practice a sounder system than that of their first attempts, so Mrs. Wells appeared to be advancing after them, and in her last works less asceticism is observable than in those which came before. A visit to Paris in the autumn and spring of 1855-6, was given mainly to practice in the *atelier* of M. Couture, when her health admitted arduous study. A Portrait of Madame Hereau, Reader to the Ex-Empress Josephine, was one of the fruits of this visit, exhibited at the Royal Academy in 1856; the study of a female head, noticed in our last, under the name of 'Elgiva,' was exhibited in the year before. 'Rowena offering the Wassail Cup to Vortigern' followed the Portrait of Madame Hereau. In 1857, she visited Italy, and was married to Mr. H. Wells at Rome. During the tour which followed this, Mrs. Wells painted the first portion of a picture exhibited at the Royal Academy last year, entitled, 'The Departure,—an Episode in the Child's Crusade, Twelfth Century,' which seems to have been her most important work known to the public. In 1858 she painted a picture, exhibited at the Winter Exhibition under the title of 'No Joy the Blooming Season gives.' In 1859 'English Homesteads,' a landscape, was exhibited at the Royal Academy, where are to be seen this year three pictures, previously noticed by ourselves. The works Mrs. Wells has left unfinished are those upon which a much higher reputation than that she had deservedly won would have been built. These show a noble inspiration developed with admirable powers of Art. Amongst the finest of these is a 'Sibyl,'—this, for tone and flesh-painting, is masterly and grandly mysterious and weird-like; a second is a study of a German maiden with yellow hair, and of most noble aspect. A third is styled

'The Bird of God,' a beautiful child with wings, as fine as can be for expression.

Among the numerous prizes founded by the philanthropic, but eccentric Baron de Monthyon, for which he left upwards of three millions of francs, is one ordered to be adjudged to the author of the most remarkable book of the year. The adjudication of the Baron's prizes, always perplexing to the Parisian philosophers and *littérateurs*, has lately been more than usually troublesome. With respect to that for the most remarkable book of 1860, the judges have given the crown to M. Xavier Marmier, for his 'Gazida.'

News has arrived from Salonichi that M. Henssey, who travels in Macedonia for scientific purposes, by order of the Emperor of France, has discovered the battle-field of Pydna, and has already made some important excavations.

The ex-King of Naples has sold to the Ambassador of Spain the beautiful Palace of the Farnesina, with Raphael's frescoes. The new proprietor has begun directly with the restoration of the basement, which had become partly defective. So far good; but terror strikes into all friends of Art, when they hear that the alterations are to be carried into the saloons which are adorned by Raphael's frescoes, and that modern architecture is to be introduced there.

THE NEW SOCIETY OF PAINTERS IN WATER COLOURS WILL CLOSE ON SATURDAY NEXT, the 7th inst. Gallery, 53, Pall Mall, near St. James's Palace.—Admission, 1s.; Season Tickets, 5s. JAMES FAHEY, Secretary.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN daily from Ten to Six. Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Secretary.

HOLMAN HUNT'S GREAT PICTURE.—The EXHIBITION of Holman Hunt's celebrated Picture of 'THE FINDING OF THE SAVIOUR in the TEMPLE,' begun in Jerusalem in 1854, and completed in 1860, is NOW OPEN at the GERMAN GALLERY, 186, New Bond Street, from Twelve to Six.—Admission, 1s.

IS NOW OPEN, EXHIBITION OF THE EIGHT HISTORICAL PICTURES, painted by WILLIAM BELL SCOTT for Sir W. Calveley Trevelyan Bart., illustrating the History of the English Border, 'Building the Roman Wall,' 'St. Cuthbert the Hermit,' 'Venerable Bede,' 'The Descent of the Danes,' 'The Spur in the Dish,' 'Bernard Gilpin,' 'Grace Darling,' and 'Our own Day.'—French Gallery, 180, Pall Mall.—Admission, 1s.

SCIENCE

SOCIETIES.

ROYAL.—June 6.—'Liquid Diffusion applied to Analysis,' by T. Graham, Esq., Master of the Mint.—The unequal diffusibility of different substances in water appears to present means of separation not unlike those long derived from unequal volatility. For as regards diffusion, there exists a "volatile" and also a "fixed" class of substances; and these distinctions appear to correspond with differences in molecular constitution of a fundamental nature. Much value is attached to diffusion, as affording the means of bringing out clearly, and subjecting to numerical expression, the distinctive properties of what appear to be two great divisions of chemical substances. The first, or *diffusive* class of substances, are marked by their tendency to crystallize, either alone or in combination with water. When in a state of solution they are held by the solvent with a certain force, so as to effect the volatility of water by their presence. The solution is generally free from viscosity, and is always rapid. Their reactions are energetic and quickly effected. This is the class of *crystalloids*. The other class, of low diffusibility, may be named *colloids*, as they appear to be typified by animal gelatine. They have little if any tendency to crystallize, and they affect a vitreous structure. The planes of the crystal with its hardness and brittleness are replaced in the colloid by rounded outlines with more or less softness and toughness of texture. Water of crystallization is represented by water of gelatination. Colloids are held in solution by a feeble power, and have little effect on the volatility of the solvent. They are also precipitated from their solution by the addition of crystalloids. The solution of colloids has always a certain degree of viscosity or gumminess, when concentrated. They appear to be insipid or wholly tasteless, unless when they undergo decomposition upon the palate and give rise to sapid crystalloids. Their solid hydrates are gelatinous bodies. They are united

to water with a force of low intensity; and such is the character of the combinations in general between a colloid and a crystalloid, even although the latter may be a powerful re-agent in its own class, such as an acid or an alkali. In their chemical reactions, the crystalloid appears the energetic form, and the colloidal the inert form of matter. The combining equivalent of the colloid appears always to be high, and it has a heavy molecule. Among the colloids rank hydrated silicic acid, and a number of soluble hydrated metallic peroxides, of which little has hitherto been known; also starch, the vegetable gums and dextrin, caramel, tannin, albumen, and vegetable and animal extractive matters. The peculiar structure and chemical indifference of colloids appear to adapt them for the animal organization, of which they become the plastic elements. Although the two classes are widely separated in their properties, a complete parallelism appears to hold between them. Their existence in nature appears to call for a corresponding division of chemistry into a crystalloid and a colloid department. Although chemically inert in the ordinary sense, colloids possess a comparative activity of their own, arising out of their physical properties. While the rigidity of the crystalline structure shuts out external impressions, the softness of the gelatinous colloid partakes of fluidity, and enables the colloid to become a medium for liquid diffusion, like water itself. The same penetrability appears to take the form of a capacity for cementation in such colloids as can exist at a high temperature. Hence a wide sensibility on the part of colloids to external agents. Another eminently characteristic quality of colloids is their mutability. Their existence is a continued metastasis. A colloid may be compared in this respect to water while existing liquid at a temperature below its usual freezing-point, or to a supersaturated saline solution. The solution of hydrated silicic acid, for instance, is easily obtained in a state of purity, but cannot be preserved. It may remain fluid for days or weeks in a sealed tube, but is sure to gelatinize at last. Nor does the change of this colloid appear to stop at that point. For the mineral forms of silicic acid, deposited from water, such as flint, are found to have passed, during the geological ages of their existence, from the vitreous or colloidal into the crystalline condition (H. Rose). The colloidal is in fact a dynamical state of matter; the crystalloid being the statical condition. The colloid possesses energy. It may be looked upon as the probable primary source of the force appearing in the phenomena of vitality. To the gradual manner also in which colloidal changes take place (for they always demand time as an element), may the chronic nature and periodicity of vital phenomena be ultimately referred. For the separation of unequally diffusive crystalloids from each other, jar-diffusion was had recourse to. The mixed solution was conveyed by means of a pipette to the bottom of a column of water contained in a cylindrical glass jar. A kind of cohabitation takes place, a portion of the most diffusive substance rising and separating from the less diffusive substances, more and more completely, as it ascends. The separation of a crystalloid from a colloid is more properly effected by a combination of diffusion with the action of a septum composed of an insoluble colloidal material. Animal membrane will serve for the latter purpose, or a film of gelatinous starch, hydrated gelatin itself, albumen or animal mucus. But by much the most effective septum used was paper, as it is metamorphosed by sulphuric acid (Gaine). It is now supplied by Messrs. De La Rue, and has become familiar under the name of "vegetable parchment" or "parchment-paper." From sheet gutta-percha a flat hoop is formed, eight or ten inches in diameter by three inches in depth, and one side is covered by a disc of parchment-paper, so as to form a vessel like a sieve. A mixed solution, which may be supposed to contain sugar and gum, is placed upon the septum to a depth of half an inch, and the instrument then floated upon a considerable volume of water contained in a basin. Three-fourths of the sugar diffuses out in twenty-four hours, and so free from gum as to be scarcely affected by subacetate of lead, and to crystallize

on the evaporation of the external water by the heat of a water-bath. The unequal action of the septum, which causes the separation described, appears to depend upon this:—The crystalloid sugar is capable of taking water from the hydrated colloidal septum, and thus obtains a medium for diffusion; but the colloid gum has little or no power to separate the combined water of the same septum, and does not therefore open the door for its escape by diffusion, as the sugar does. This separating action of the colloidal septum is spoken of as *dialysis*. Dialysis was applied to the preparation of various colloids. The mixed solution obtained by pouring silicate of soda into water acidulated with hydrochloric acid, was placed upon a parchment-paper dialyser and allowed to diffuse into water, the latter being occasionally changed. After the lapse of five days seven-eighths of the original silicic acid was found to remain liquid upon the septum, and to be so free from hydrochloric acid and chloride of sodium as not to give a precipitate with acid nitrate of silver. The true hydrated alumina, and also Mr. Crum's metalumina, were obtained soluble by dialysing solutions of these oxides in the chloride and acetate of the same metal. So also the hydrated peroxide of iron, in addition to the hydrated metaperoxide of iron of M. Péan de Saint-Gilles, and the soluble hydrated chromic oxide. The varieties of prussian blue are obtained soluble by dialysing their solution in oxalate of ammonia, the latter salt diffusing away. Stannic and titanous acids appear as insoluble gelatinous hydrates. A solution of gum-arabic (gummate of lime), dialysed after an addition of hydrochloric acid, gave at once the pure gummic acid of Frémy. Soluble albumen is obtained in a state of purity by dialysing that substance with an addition of acetic acid. Caramel of sugar, purified by repeated precipitation by alcohol and afterwards by dialysis, contains more carbon than any of the caramellic bodies of Gélis; it forms a tremulous jelly when concentrated, and appears decidedly colloidal. Caramel, like all other colloids, has a soluble and an insoluble modification. The latter has its solubility restored by the action of alkali, followed by that of acetic acid and subsequent dialysis. Dialysis proves highly useful in separating arsenious acid and metallic poisons from organic fluids. Defibrinated blood, milk, and other organic fluids charged with a few milligrammes of arsenious acid, and placed upon the dialyser, were found to impart the greater proportion of the arsenious acid to the external water in the course of twenty-four hours. The diffuse was so free from organic matter, that the metal could be readily precipitated by sulphuretted hydrogen, and the quantity weighed. For at or near its melting-point appears to be a colloidal substance, and exhibits a resemblance to a firm jelly in elasticity, the tendency to rend, and to redintegrate on contact. The consideration of the properties of gelatinous colloids appears to show that osmose is principally an affair of the dehydration of the gelatinous septum under influences having a catalytic character, and that the phenomenon is independent of diffusion. The colloidal septum is capable of hydrating itself to a higher degree in contact with pure water than in contact with a saline solution. Colloidal septa, swollen in consequence of contact with dilute acid or alkali, appear to acquire increased sensibility to osmose, in consequence of their unusually high degree of hydration.

ASTRONOMICAL.—June 14.—Dr. Lee, President, in the chair.—Messrs. W. J. Rideout, S. H. Winter, J. G. Perry, W. Penn, and J. H. Dallmeyer, were elected Fellows.—'On the Secular Acceleration of the Moon's Mean Motion,' by W. F. Donkin, Esq.—'Observations of the Variable Star η Argus,' by F. Abbott, Esq.—'On the Probable Identification of Antheim's Variable of 1670 (*Nova Vulpecule*), and on some other Variable Stars,' by J. R. Hind, Esq.—'On the Nomenclature of the Minor Planets,' by J. R. Hind, Esq.—'Note on the Disposition of the Penumbra of a Solar Spot,' by W. R. Birt, Esq.—'On the Ring of Saturn,' by W. Lassell, Esq.—'On the Ring of Saturn and on Jupiter's Satellites,' by Capt. W. S. Jacob.—'Note on an Appearance observed on Jupiter,' by Mr. Birt,

March 22, 1861,' by J. Baxendall, Esq.—'Results of Meridional Observations of Small Planets; Occultation of a Star by the Moon; and Phenomena of Jupiter's Satellites; observed at the Royal Observatory, Greenwich, during the month of May, 1861,' communicated by the Astronomer Royal.—'Occultation of Mars by the Moon, observed at the Dudley Observatory, 1861, May 12,' by O. M. Mitchel, jun.—'Occultation observed at Highbury,' by T. W. Burr, Esq.—'Places of Comet I. 1861,' by N. M. R. Edmondson, Esq.—'Elements and Ephemeris of Comet I. 1861,' by Dr. C. F. Pape.—'Observations of Comet I. 1861, made with the Ocott Meridian Circle, at the Dudley Observatory, observed by G. W. Hough, Esq.

ROYAL INSTITUTION.—June 3.—The Duke of Northumberland, K.G., President, in the chair.—'On the Mausoleum of Halicarnassus,' by C. T. Newton, Esq.

June 7.—The Duke of Northumberland, K.G., President, in the chair.—'On the Physical Basis of Solar Chemistry,' by Prof. J. Tyndall.

FINE ARTS

DEPARTMENT OF SCIENCE AND ART.

THE Eighth Report of the Science and Art Department lies before us. From the statements contained therein it is apparent that the services rendered to the public in return for the expenditure are not only considerable, but becoming more appreciated year by year. With regard to the Science Schools, it appears that the system of aid to instruction in practical and descriptive geometry, physics, geology, mineralogy and natural history by means of payments on results to teachers and prizes to the students, introduced in 1859, has given satisfactory promise of success. At the examination in December last, 89 candidates for certificates presented themselves, being an increase of 32 over the previous year: 75 of these candidates were successful. In 1860 there were 386 students. 30 Science classes were established in the past year, under certificated teachers, in various places, and 1,340 candidates registered their names for the first general examination. In the Navigation Schools, there were 2,490 students in 1859; in 1860, 2,396; the fees received from the last were 1,152*l.* 8*s.* 9*d.* As respects Art in the South Kensington Normal Training School, the state of the School and the teaching in connexion with it is reported to be satisfactory. 68 students in training have received allowances; 40 have attended the classes free; 12 have obtained masterships during the year. The number of students attending the Schools has been 541, against 419 in 1859. The like increase has taken place at the London District Schools, which afford a total of 1,530 students. The number of poor children taught drawing in the metropolis by masters and mistresses in training has been 9,801, against 9,411 in 1859. The number of Schools of Art in Great Britain and Ireland is now 85, against 78, in 1859; new schools having been established at Arbroath, Boston, Bromsgrove, Cirencester, Preston, Reading and Stroud. 13,616 persons, chiefly adults, have been taught in the provincial schools, who paid 9,048*l.* 16*s.* 11*d.* in fees. There has been a decrease in this matter of 2,393 students,—a fact officially accounted for by the operation of the Volunteer movement, which is said to have attracted the skilled artisans from the evening schools. It is worth noticing that this decrease is even more significant than the actual numbers suggest, as previous years have never failed to show a considerable increase, which is now swallowed up. Thus, in 1855, the number attending the provincial schools is given at 8,274; in 1856, 10,204; in 1857, 10,238; in 1858, 10,784; in 1859, 13,787; in 1860, 11,121. The number of poor children taught drawing in public schools in the provinces has been 74,267, and the fees 2,942*l.* 12*s.* 9*d.* In 1859, the number was 67,490, fees 2,782*l.* 19*s.* 7*d.* The Diocesan and other Training Colleges have been examined in drawing, with satisfactory results. 2,721 teachers and students were examined. In 1860, 79 obtained certificates, against 59 in 1859. These schools appear to be of many denominations; for amongst them

figure Roman Catholic, Episcopalian, Church of England, Free Church, and Wesleyan Schools and Colleges. Some are for masters, some for mistresses only, some for both combined. The number of poor children taught drawing in the metropolis by masters and mistresses in training (for, by an excellent arrangement, the incipient teachers try their "prentice hands" upon the pupils of the parochial and other schools, to the benefit of both, for practice in the art of imparting instruction is one of the most important branches of a teacher's education amply afforded by this intelligent arrangement) has been 9,801; in 1859, 9,411: an increase of 390. It appears that not only are there more pupils, but that the grade of instruction afforded to them is higher, 384 more students being engaged upon drawing from models than was the case last year. The total number of persons receiving instruction in drawing through the agency of the Department in 1860 has been 89,481, the fees 17,221*l.* 6*s.* 8*d.* In 1859, the numbers were 84,972, the fees 15,366*l.* 4*s.* 6*d.* Some thousands of prizes for drawing on slates, and what are called 1st and 2nd grade prizes, were awarded last year; also 861 local medals (against 758 in 1859), and 76 (against 67) national medallions. Examples for Science and Art instruction have been furnished to 223 schools. These schools have been of various descriptions, male as well as female; Parish Free Schools, Schools of Art, National, Normal Colleges, Catholic Institutes, Oratory Schools, Mechanics' Institutes, Wesleyan Schools, Working Men's Club-Rooms, Agricultural and Parochial Schools, a Deaf and Dumb Institution, People's Colleges, Athenæums, Charity Schools, Working Men's Colleges, and every kind of teaching institution, as far as we can see, except Jewish schools, have been so aided by the State.

The Commissioners, finding that a considerable number of large towns have not as yet established schools of Art, have deemed it advisable to communicate with the authorities thereof, and offer that an inspector should visit them with a view to make known the system of the Department for extending the opportunity of learning drawing offered to artisans and others who are at present unable to obtain instruction. They offer, under certain circumstances, to furnish a certificated teacher in those localities where a special school of Art could not be successfully established; also to conduct an annual examination in drawing and to give rewards for the attainment of a certain standard of proficiency, provided that fifty persons, children, adults, artisans, &c., present themselves. The new courts at South Kensington, for which 17,000*l.* was voted last year, will probably be completed during the present autumn. A further number of British pictures has been placed under glass. Many numerous and important additions have been made to the Art-collections during the past year, these have already been noticed in the *Athenæum*. Many valuable loans are acknowledged from private individuals, including the Duke of Devonshire's gems, (500 in number), Limoges enamel, from Sir Francis Scott,—Jewelry, from Mr. Eastwood,—Majolica bronzes and jewelry, from the late M. Uzielli, Esq., and a collection of antique jewels, (170 in number), from J. Webb, Esq. The demand for photographs far exceeds the supply. Since the opening of the offices, in October, 1859, to December, 1860, 15,584 have been issued. Negatives have been made from the 'Liber Studiorum' of Turner, and, by way of experiment, to ascertain how far the assistance of private photographers can be employed in printing and publishing photographs, some have been invited to purchase these negatives at cost price: one established firm has undertaken to produce these, the Department reserving the liberty to sell other negatives of the same work, if the public call for better or cheaper impressions. A new reading Room has been added to the Educational Division, and increased attendance followed. 1,600 volumes have been added to the Library. The additions to the Food and Animal Collections have been numerous and interesting.

Lectures have been delivered on various subjects during the year; but we must not shut our eyes to the fact that, considering the importance of the

themes dealt with, and the undeniable rank, ability and fame of the lecturers, the attendance was pitifully small. We have seen Prof. Owen lecturing to a half-empty theatre; Prof. Huxley little better off; and Dr. Lankester with but a small audience. ("Each lecture was attended by an average of 55 persons, says the Report of the last.") Dr. Marshall has lectured on the 'Human Form,' and, with the students of the adjoining schools, and all that increase which a Government action draws towards itself, he says his audience has been "an average of 82 persons."

FINE-ART GOSSIP.—Mr. E. W. Wyon has completed his statue of 'Britomartis,' executed in marble for the Corporation of London, which will shortly be placed on its pedestal and seen by the public.

Our readers who are Art-students, will be glad to learn that it is the intention of Mr. John Marshall to publish a work on Artistic Anatomy for the use of students, which is to be illustrated by numerous and valuable woodcuts and other plates. Mr. J. Marshall is not only peculiarly competent to the speciality of this task by his appointment as Lecturer on Anatomy to the Schools at South Kensington, but by his long acquaintance with artists and their wants. Such a book is much needed. The autumn is named for its appearance,—at least, for the first part of the subject.

In our recently given account of the building for the International Exhibition of 1862, we omitted to call attention to a very ingenious plan by which the difficulty under which the architect was placed by the floor of the building within being some five feet below the level of the road without was overcome, not only without cost, but so as to turn a disadvantage into an advantage. At the east and west ends the roadway rises above the floor level; to obviate the mischief of having a descending step at the entrances, a dais or raised platform will be placed under each dome, of nearly the same dimensions as the dome itself; upon these will probably be fountains and shrubs, and from the steps ascending to them and looking inwards, a spectator will see over the heads of the multitudes to the extreme end of the vista, and take the whole in at a glance, with command also of the openings of the side aisles and courts. Thus, in place of coming suddenly upon a descending step or steps at the entrance, the visitor will ascend, gaining thereby a higher level, and from thence look over the whole scene within.

We have received a woodcut impression from a drawing made by Miss Florence Claxton, from her picture in the Portland Gallery, entitled 'Woman's Work (a Medley),' intended, so says the artist, to illustrate the received opinion that "Woman's Work" should centre in Man. In this queer production are shown all the vices which are said to be appropriate to the present state of popular ideas on the subject. In the centre a "swell" submits to the blandishments of four matrimonially-disposed young ladies, who attempt to captivate him in various ways. Various illustrations of strong-mindedness accompany this leading point. The whole is well intentioned, but exceedingly commonplace and weak. Like most would-be reformers, the designer has forgotten that part of her own task which requires that she should begin at home. For this desirable end we suggest that somewhat better drawing and more study of colour—we speak from remembrance of the original—will be fit qualifications for the office of popular teacher.

MUSIC AND THE DRAMA

NEW PUBLICATIONS.

INSTRUMENTAL MUSIC.

It is no easy task to dispose of the instrumental music published during the season, of which notice was, necessarily, postponed on its appearance.

Confining ourselves for the moment to what is grave, *An Introduction and Six Variations on the Russian National Melody, for the Organ*, by C. C. Verrinder (Op. 6), (Addison & Co.), must be first spoken of. This gentleman is rising into notice as a conscientious professor of the greatest of in-

struments—yet the one least favoured by Fortune. It is easy to comprehend why composers for the organ love the form of variations, since thereby “the stops” are shown off in all their variety and contrast. Mr. Verrinder obviously understands this part of his duty with intimate experience. The variations as to combination are well laid out; as to harmony, we are less satisfied with some of them. The modulations are, here and there, too far fetched; but this may be a matter of individual taste, and variety must be got in a work having this form. Handel got effect in his variations by amplification; Beethoven sometimes by change of key—sometimes by a disguise, which deceived the ear, till the eye had studied the score. The introduction to the *Finale*, however, is objectionable on other grounds. The Grand Russian tune is not good as subject for a *fugue*; neither to be treated in accelerated *tempo*,—since, when so dealt with, it becomes frivolous. The close itself is very pompous; and the organist who can play it must have despotic command over the pedals.

Symphony, No. 1, for Orchestra. By E. Pauer. Op. 50. (Mayence, Schott & Co.)—This is a German publication, in score—beautifully brought out—of a careful and interesting orchestral work by our Austrian townsman and Professor.—The *Symphony*, considered on its own merits, is a very good one,—considering the circumstances of its parentage, and as coming from a musician actively engaged in incessant teaching, it acquires both value and honour. The several movements bespeak a skilled hand, and a clear, if not an originally imaginative, mind. It is a *Symphony*, the production of which would do credit, not merely to its writer, but to any musical society,—and we trust to be allowed to speak of it under the conditions of careful execution. Meanwhile, its issue in the form before us shames our London publishers. How long is it since any one among them has ventured on a score! The most venturesome could obtain few better modern scores than Herr Pauer's.

“*Frascarola*” or *Tarantella*, for Two Performers.—“*Turco-Egyptienne*,” *Grand March for Two Performers.* By J. H. Stuntz. (Ashdown & Parry.)—We imagine this music to be from the pen of the Bavarian Chapelmaster, of whose industry in composition some notice appeared not long since in this journal. The want of wide popularity which attended the life-labours of a most respectable professor is explicable,—supposing these two to be fair specimens of his talent. Neither the one nor the other is original or amusing;—the *March*, in particular, suffers, if we allow ourselves to recollect the four-handed *Marches* by Prof. Moscheles,—still more those by Schubert (the last how masterly and various!). Perhaps, Herr Stuntz may have been more successful in other forms of writing than for the pianoforte.

Valse Caprice, for Violin, Violoncello and Piano, by Auguste Erzmann, Op. 15 (same publishers), is a curiosity. We do not remember a modern composition which aspires to be classical analogous to it in form; but this is well nigh its only merit. In spite of its title, the ‘*Caprice*’ is dry rather than freakish. The three instruments, too, are tormented more than displayed.

Last, come reprints from the music of the “Ancients,”—whose “periwigs” (to adopt the known French sarcasm) of dead hair, and powdered,—if so it be,—are fresher than the hyacinthine locks, oiled, curled and essenced, of most of their successors. They wrote as men who had ideas. For these reprints we are indebted to Mr. Lonsdale's publishing-house. But here are a *Gigue* and a *Gavotte* and *Bourrée* (Nos. 15 and 16 of a serial publication), by Sebastian Bach, in a form, we fancy, of arrangement, as well as reprint,—since the three form part of an orchestral *suite* (the other night played at a concert of the Musical Art-Union). Or did the great man of Leipzig use them twice? as Handel was apt to do.—Then, here are some short movements by Handel, which we do not recollect to have seen in any other form, among his works—trifles, it may be, but the triflings of a great poet, let his language be ever so antiquated.—A *Fantasia*, from *Opera Quinta* (no one need depend on the number),—a *Capriccio*, from *Opera Tercia* (as little capricious as the *Fantasia*

is little fantastic),—a *Sonatina* (all three printed from Amsterdam copies, collected by the diligent M. Schœlcher), are so much fresher than much of the stale music of the moment, that we prefer even the formal *costume* of their old finger-passages to many of the new tricks and graces of attire.—Another reprint of a totally different class is that of ‘*Le Diable à Quatre*’—fourth *Sonata* by Woelfl (Op. 50). The first movement of this, like most of Woelfl's music known to us, just misses being very fine. It is an *Allegro Moderato*; picturesque, various, well sustained, and attractive as displaying the player. The *Andante* is merely a foolish folks' tune, with a few variations, not a whit better than those by the Abbé Gelinek, who it was said could vary any theme so as to make it palatable, but whose variations have now vanished into the limbo of clever Abbés.—The *Finale Allegretto* bears a curious resemblance in theme to the *Rondo* of Beethoven's *Sonata*, Op. 90; but how different is the treatment of the melody by the two men, supposing its suggestion to have arisen from the same source!—Woelfl's want of enterprise and variety are doubly striking by comparison with those of the great master.

GRECIAN.—One of the penalties paid by managements for preferring translated to original pieces is, that the first producers can never be sure of their property in the adapted work. No long time ago, Mr. Webster produced a drama called ‘*The Prestigator*,’ at the Adelphi, apparently as a kind of compensation for *Belphegor*, a character of which Mr. Dillon had deprived him. Not alone are the two pieces alike in subject, but, it would appear, also in destiny. The elaborate Adelphi version of ‘*Belphegor*’ was reduced, for the country stage, within narrow limits, and in this abridged, and, as it proved, intenser form was returned to London, and in that shape retains possession of the boards. Of the longer version nothing more is likely to be heard. In like manner ‘*The Prestigator*’ has passed to the Grecian Theatre under the title of ‘*The Home in the Heart*,’ much reduced in length, with an extensive re-adjustment of details. The result is a light piece instead of a heavy one, and an effective and satisfactory catastrophe for one in all respects the contrary. A good play is, in a word, constructed out of a doubtful one. Mr. Mead performs the mountebank with efficiency, and Mr. George Conquest, the adapter of the piece, his attendant imp with a profusion of humorous points that keep the audience in a constant state of merriment. ‘*The Home in the Heart*’ will, therefore, we believe, long survive the previous adaptation, and remain the property of the stage when its competitor is forgotten. And in this way it is that dramatic ideas and incidents pass from country to country, and, at last, get embodied in an ultimate form which has no claim to invention or genius, but is merely the result of stage experience and mechanical playwright craft.

STANDARD.—‘*The Flower-Girl*,’ a drama successful at the Surrey, has been transplanted, with Mr. Creswick, to these boards, and is already in the third week of its run. It has attracted crowded houses. It is simply the dramatization of a tale published in one of the cheap journals.

MUSICAL AND DRAMATIC GOSSIP.—Our opera season draws rapidly to a close; this day week will see the end of it.—Madame Grisi took her farewell on Wednesday. So often have we written “last words” on her remarkable talent—on the rare combination in her of beauty of voice and person, with a dramatic energy almost amounting to genius,—so often have we commemorated the extraordinary steadiness with which she has kept faith with her London public (having caused less disappointment than any actress in recollection),—so repeatedly have we done her justice as an artist whose attractions no rival could imperil here—as a dramatic singer who, if she could not originate much, could adopt the suggestions of others with a resolute strength not to be set aside—that we are spared from once again going through the list of triumphs, which range from 1834 (the year of her first appearance here) to

1861—from once again regretting that Time will be Time, subjecting even the most robust and fairest works of Nature to “wear and tear.” No need then to enter into detail, while we offer thanks for past bounties, and good wishes for the future, to the Queen who has wisely (and not a second too soon) abdicated her throne. It is said that she is bound, by express agreement, to sing no more in public in London; but as her re-appearance at sundry private concerts has been one of the events of the fashionable season, it will not surprise us if in this form of occupation Madame Grisi still continues her relations with her staunch English admirers for awhile longer,—it being obvious that her own interest and delight in the exercise of her art remain unabated by Time.—There is to be a repetition of the “sweet sorrow” of parting on Wednesday next, at the Crystal Palace—for which day a farewell Grisi Festival is announced.

We apprehend that the last novelty of the Italian Opera season will be presented this evening by Mdle. Patti's appearance as *Rosina*. Ere closing the register for 1861, let us say a word in behalf of 1862. Mr. Gye is obviously set against new works; otherwise, he would not have been so deaf to the wishes of many of his subscribers to make acquaintance with the ‘*Faust*’ of M. Gounod,—an opera, prospering everywhere, by a composer who is now placed, beyond question, in the first rank of living celebrities.—Let then, are the doors of his temple close, a revival be suggested, safe and sure, to which his company is excellently adapted,—‘*Le Nozze*,’ for Mesdames Penco, Mielan-Carvalho, Mdle. Patti, M. Faure, and Signori Ciampi or Ronconi.

Messrs. Puttick & Simpson had a more than usually important sale of musical instruments within the week. Among the prices realized were 81*l.* for a Stradivarius—48*l.* for another violin by the same maker—84*l.* for an Amati violin (formerly the property of Sir W. Curtis). The violoncelli fetched lower prices; an instrument attributed to Joseph Guarnerius brought 50*l.*; another, by Stradivarius, was secured by Signor Piatti for 40*l.*

New operas by MM. Semet and Grisar are in preparation for the new Théâtre Lyrique, in Paris; also, a grand (Biblical?) opera, by M. Halévy, ‘*Noë*,’ in which, says the *Univers Musical*, Madame Viardot will take the principal part. The same authority announces as forthcoming a version, for the new theatre, of Dr. Marschner's ‘*Templer und Judinn*.’—It states, too, that ‘*Les Troyens*,’ by M. Berlioz, is not, for the present, to be given at the Grand Opéra.—The re-appearance there of Madame Viardot in ‘*Le Prophète*’ has been a great success. It is her opera. In the hands of no one else has the part of *Fides* ever been effective, or appeared probable.—The sensation excited has been real enough to decide the adjournment of the production of ‘*Alceste*’;—and may, possibly, bring on the production of ‘*L'Africaine*,’ since it is notorious that M. Meyerbeer “waits for the echo” with a timidity hardly consistent with the consciousness of creative genius. Handel (and Mendelssohn) were of different stuff, and cared less for the materials of interpretation than to multiply outlets for such inventive faculty as they possessed.—Nothing, with the solitary exception of Staudigl's singing, and one song by Mr. Lockey, could well be less satisfactory than the first performance of ‘*Elijah*’ at Birmingham. Yet the Oratorio endures, in spite of the misfit (as tradesmen say) of its first singers.—With all his skill and adroitness, M. Meyerbeer has never sufficiently trusted to his own music.—This by way of digression:—to return to Paris, we are reminded that there seems to be no possibility of keeping fire out of theatres. The other day a fire broke out in the magazine of scenery at the Grand Opéra, by which much property has been destroyed; among other valuables the decorations of several operas lately produced there.

A taste for part-singing appears to have taken wholesome possession of France. There is to be a meeting of *Orphéonistes* at the great fair of Beaucaire this year.

TO CORRESPONDENTS.—W. B.—H. M. C.—S. J. E.—G. A. J.—R. H.—W. T.—One acquainted with the Facts.—E. T. M.—received.

CAMBRIDGE.

MESSRS. DEIGHTON, BELL AND CO.'S

LIST OF BOOKS, FOR COLLEGES AND SCHOOLS.

CAMBRIDGE GREEK AND LATIN TEXTS.

Carefully reprinted from the Best Editions.

This Series is intended to supply, for the use of Schools and Students, cheap and accurate editions of the Classics, which shall be superior in mechanical execution to the small German editions now current in this country, and more convenient in form. The Texts of the 'Bibliotheca Classica' and Grammar-School Classics, so far as they have been published, will be adopted. These editions have taken their place among scholars as valuable contributions to the classical literature of this country, and are admitted to be good examples of the judicious and practical nature of English scholarship; and as the Editors have formed their texts from a careful examination of the best editions extant, it is believed that no texts better for general use can be found. The volumes will be well printed at the Cambridge University Press, in 16mo. size, and will be issued at short intervals, neatly bound in cloth.

NOVUM TESTAMENTUM GRÆCUM. Textus Stephanici, 1550. Accedunt variae lectiones editionum Bezae, Elzeviri, Lachmanni, Tischendorfii, et Tregellii. Curante F. H. SCRIVENER, A.M. 4s. 6d.

An Edition on Writing Paper, for Notes, 4to. half-bound, 12s.

ÆSCHYLUS, ex novissima recensione F. A. PALEY, A.M. 3s.

CÆSAR DE BELLO GALLICO, ex recensione G. LONG, A.M. 2s.

CICERO DE SENECTUTE et DE AMICITIA, recensuit G. LONG, A.M. 1s. 6d.

EURIPIDES, ex recensione F. A. PALEY, A.M. 3 vols. Vol. I. 3s. 6d.; Vol. II. 3s. 6d.; Vol. III. 3s. 6d.

HERODOTUS, recensuit J. W. BLAKESLEY, S.T.P. 2 vols. 7s.

HORATIUS, ex recensione A. J. MACLEANE, A.M. 3s. 6d.

LUCRETIUS, recognovit H. A. J. MUNRO, M.A. 2s. 6d.

THUCYDIDES, recensuit J. G. DONALDSON, S.T.P. 2 vols. 7s.

VERGILIUS, ex recensione J. CONINGTON, A.M. 3s. 6d.

XENOPHONTIS EXPEDITIO CYRI, recensuit J. F. MACMICHAEL, A.B. [In the press.]

Others in preparation.

ARUNDINES CAMI. Sive Musarum Cantabrigiense Lusus Canonici. Collecti atque ed. H. DRURY, A.M. A New and cheaper Edition (the Fifth), revised and corrected. Crown 8vo. 7s. 6d.

DEMOSTHENES de FALSA LEGATIONE. Second Edition, carefully revised. By R. SHILLETTO, M.A. 8vo. 8s. 6d.

DEMOSTHENES, SELECT PRIVATE ORATIONS of. After the Text of Dindorf, with the various Readings of Keble and Bekker, and English Notes. For the use of Schools. By C. T. PENROSE, A.M. Second Edition. 12mo. 4s.

A COMPLETE LATIN GRAMMAR. Second Edition, very much enlarged, and adapted for the use of University Students. By J. W. DONALDSON, D.D. 8vo. 14s.

The enlarged Edition of the Latin Grammar has been prepared with the same object as the corresponding work on the Greek Language. It is, however, especially designed to serve as a convenient handbook for those students who wish to acquire the habit of writing Latin; and with this view it is furnished with an Antibarbarus, with a full discussion of the most important synonyms, and with a variety of information not generally contained in works of this description.

A COMPLETE GREEK GRAMMAR. Second Edition, very much enlarged, and adapted for the use of University Students. By J. W. DONALDSON, D.D. 8vo. 16s.

VARRONIANUS. A Critical and Historical Introduction to the Philological Study of the Latin Language. Third Edition, considerably enlarged. By J. W. DONALDSON, D.D. 8vo. 16s.

FOLIORUM SILVULA, Part I. Being Select Passages for Translation into Latin Elegiac and Heroic Verse. Arranged and Edited by H. A. HOLDEN, M.A., Head-Master of Queen Elizabeth's School, Ipswich, late Fellow of Trinity College, Cambridge. Second Edition. Post 8vo. 6s.

FOLIORUM SILVULA, Part II. Being Select Passages for Translation into Latin Lyric and Greek Verse. By H. A. HOLDEN, M.A. Second Edition. Post 8vo. 7s. 6d.

FOLIORUM CENTURIÆ. Selections for Translation into Latin and Greek Prose, chiefly from the University and College Examination Papers. By H. A. HOLDEN, M.A. Second Edition. Post 8vo. 8s.

PROGRESSIVE EXERCISES in GREEK TRAGIC SENARIU. followed by a Selection from the Greek Verses of Shrewsbury School, and prefaced by a short Account of the Iambic Metre and Style of Greek Tragedy. For the use of Schools and Private Students. Edited by B. H. KENNEDY, D.D., Head-Master of Shrewsbury School. Second Edition, altered and revised. 8vo. 8s.

SOPHOCLES, the CŒDIPUS COLONEUS of, with Notes, intended principally to explain and defend the Text of the Manuscripts as opposed to conjectural Emendation. By the Rev. C. E. PALMER, M.A. 3s.

Preparing for publication, uniformly printed in fcap. 8vo.

CAMBRIDGE SCHOOL AND COLLEGE TEXT BOOKS,

A Series of Elementary Treatises adapted for the use of Students in the Universities, Schools, and Candidates for the Public Examinations.

The Study of Mathematics and Science being now generally introduced into our Public Schools and Colleges, and still further extended by the various Public Examinations, the Publishers have been induced to undertake a Series of cheap Text Books, specially adapted to the wants of those classes.

In order to secure a general harmony in the treatment, these Works will be edited by Members of the University of Cambridge, and the methods and processes employed in University teaching will be followed.

Principles will be carefully explained, clearness and simplicity will be aimed at, and an endeavour will be made to avoid the extreme brevity which has so frequently made the Cambridge treatises too difficult to be used by those who have not the advantage of a Private Tutor. Copious Examples will be added.

The following Volumes are already in progress:—

ELEMENTARY STATICS. By the Rev. HARVEY GOODWIN, D.D., Dean of Ely.

ELEMENTARY DYNAMICS. By the Rev. HARVEY GOODWIN, D.D., Dean of Ely.

ELEMENTARY ASTRONOMY. By the Rev. R. MAIN, M.A., Radcliffe Observer.

ELEMENTARY HYDROSTATICS. By W. H. BESANT, M.A., late Fellow of St. John's College.

ELEMENTARY GEOMETRICAL CONIC SECTIONS. By W. H. BESANT, M.A., late Fellow of St. John's College.

ELEMENTARY TRIGONOMETRY. By T. P. HUDSON, M.A., Fellow of Trinity College.

ELEMENTARY CHEMISTRY. By G. D. LIVEING, M.A., late Fellow of St. John's College.

PRINCIPLES and PRACTICE of ARITHMETIC. By the Rev. J. HIND, M.A. Eighth Edition, with Questions. 4s. 6d.

* KEY, with Questions for Examination, Second Edition, 4s.

PRINCIPLES and PRACTICE of ARITHMETICAL ALGEBRA, with Examples. By the Rev. J. HIND, M.A. Third Edition. 12mo. 5s.

ELEMENTS of ALGEBRA. By the Rev. J. HIND, M.A. Sixth Edition, revised. 540 pp. 8vo. 10s. 6d.

COLLECTION of EXAMPLES in ARITHMETIC, ALGEBRA, GEOMETRY, LOGARITHMS, TRIGONOMETRY, CONIC SECTIONS, MECHANICS, &c. with Answers and Occasional Hints. By the Rev. A. WREIGLEY, M.A. Fifth Edition. 8vo. 8s. 6d.

A COMPANION to WRIGLEY'S COLLECTION of EXAMPLES and PROBLEMS, being Illustrations of Mathematical Processes and Methods of Solution. By J. PLATTES, Esq. and Rev. A. WREIGLEY, M.A. [Nearly ready.]

ELEMENTARY COURSE of MATHEMATICS. By the Rev. HARVEY GOODWIN, D.D., Dean of Ely. Fifth Edition. 8vo. 12s.

COLLECTION of PROBLEMS and EXAMPLES, adapted to the Elementary Course of Mathematics. By H. GOODWIN, D.D. Second Edition. 8vo. 6s.

ELEMENTS of PLANE and SPHERICAL TRIGONOMETRY. By the Rev. J. HIND, M.A. Fifth Edition. 12mo. 6s.

ELEMENTARY HYDROSTATICS for JUNIOR STUDENTS. By R. POTTER, M.A., late Fellow of Queen's College, Cambridge, Professor of Natural Philosophy and Astronomy in University College, London. 7s. 6d.

The PROPOSITIONS in MECHANICS and HYDROSTATICS which are required for those who are not Candidates for Honours. By A. C. BARRETT, M.A. Second Edition. Crown 8vo. 6s.

PROBLEMS in ILLUSTRATION of the PRINCIPLES of THEORETICAL MECHANICS. By W. WALTON, M.A. Second Edition. 8vo. 18s.

OF MOTION. An Elementary Treatise. By the Rev. J. R. LUNN, M.A., Fellow and Lady Sadleir's Lecturer of St. John's College. 8vo. 7s. 6d.

This book is adapted to those who have not a knowledge of the Differential Calculus, as well as to those who, having a knowledge of it, wish to confine themselves to the Elementary portions of the Science of Motion. An Appendix contains certain Geometrical Properties of the Cycloid, and a number of Problems from recent Examination-Papers in the Senate House and St. John's College.

TREATISE on HYDROSTATICS and HYDRODYNAMICS. By W. H. BESANT, M.A. 8vo. 8s.

COLLECTION of ELEMENTARY PROBLEMS in STATICS and DYNAMICS. Designed for Candidates for Honours, first three days. By W. WALTON, M.A. 8vo. 10s. 6d.

BRUNNOW'S SPHERICAL ASTRO-NOMY. Part I. Including the Chapters on Parallax, Refraction, Aberration, Precession, and Nutation. Translated by the Rev. R. MAIN, M.A. F.R.S., Radcliffe Observer at Oxford. 8vo. 8s. 6d.

NEWTON'S PRINCIPIA. First Three Sections, with Appendix and the Ninth and Eleventh Sections. By the Rev. J. H. EVANS, M.A. Fourth Edition. 8vo. 6s.

PHYSICAL OPTICS. Part II. The Corpuscular Theory of Light discussed Mathematically. By RICHARD POTTER, M.A., late Fellow of Queens' College, Cambridge, Professor of Natural Philosophy and Astronomy in University College, London. 7s. 6d.

NOVUM TESTAMENTUM GRÆCUM. Textus Stephanici, 1550. Accedunt variae lectiones editionum Bezae, Elzeviri, Lachmanni, Tischendorfii, et Tregellii. Curante F. H. SCRIVENER, A.M. 16mo. 4s. 6d.

An Edition on Writing-paper, for Notes. 4to. half bound, 12s.

BENTLEY CRITICA SACRA. Notes on the Greek and Latin Text of the New Testament, extracted from the Bentley MSS. in Trinity College Library. With the Abbé Bultet's Collation of the Vatican MS., a specimen of Bentley's intended Edition, and an account of all his Collations. Edited, with the permission of the Master and Seniors, by the Rev. A. ELLIS, M.A., late Fellow and Junior Dean of Trinity College, Cambridge. [Nearly ready.]

A PLAIN INTRODUCTION to the CRITICISM of the NEW TESTAMENT. With numerous Fac-similes. For the use of Biblical Students. By F. H. SCRIVENER, A.M. [Nearly ready.]

HINTS for SOME IMPROVEMENTS in the AUTHORIZED VERSION of the NEW TESTAMENT. By the Rev. J. SCHOLFIELD, M.A., Regius Professor of Greek in the University. Fourth Edition. Fcap. 8vo. 4s.

A COMPANION to the NEW TESTAMENT. Designed for the use of Theological Students and the Upper Forms in Schools. By A. C. BARRETT, M.A. Fcap. 8vo. 5s.

An HISTORICAL and EXPLANATORY TREATISE on the BOOK of COMMON PRAYER. By W. G. HUMPHREY, B.D., late Fellow of Trinity College, Cambridge. Second Edition, enlarged and revised. Post 8vo. 7s. 6d.

CAMBRIDGE EXAMINATION PAPERS, 1859. Being a Supplement to the Cambridge University Calendar. 12mo. 5s.

Containing those set for the Tyrrwhitt's Hebrew Scholarship.—Theological Examinations.—Curus Prize.—Cross Scholarship.—Law Degree Examination.—Mathematical Tripos.—The Ordinary B.A. Degree.—Smith's Prize.—University Scholarship.—Classical Tripos.—Moral Sciences Tripos.—Chancellor's Legal Medal.—Chancellor's Medals.—Bell's Scholarship.—Natural Sciences Tripos.—Previous Examination.—Theological Examination.—With Lists of Ordinary Degrees, and of those who have passed the Previous and Theological Examinations.

The Examination Papers of 1856, price 2s. 6d.; 1857 and 1858, 3s. 6d., may still be had.

THE STUDY of the ENGLISH LANGUAGE an ESSENTIAL PART of a UNIVERSITY COURSE: An Extension of a Lecture delivered at the Royal Institution of Great Britain, February 1, 1861. With Coloured Language-Maps of the British Isles and Europe. By ALEXANDER J. D. DORSEY, B.D., English Lecturer at Corpus Christi College, Cambridge, late Head-Master of the English Department in the High School of Glasgow. Crown 8vo. cloth, 2s. 6d.

A MANUAL of the ROMAN CIVIL LAW, arranged according to the Syllabus of Dr. HALLIFAX. Designed for the use of Students in the Universities and Inns of Court. By G. LEATHEWELL, LL.D. 8vo. 12s.

Cambridge: DEIGHTON, BELL & CO. London: BELL & DALDY.

EDUCATIONAL BOOKS

PUBLISHED BY BELL & DALDY,
186, FLEET-STREET, LONDON, E.C.

NEW FRENCH COURSE,

ON A GREATLY IMPROVED PLAN, *Peap. 8vo.*

In Use at Eton, Harrow, Rugby, Wellington College, Trinity College, Dublin, &c.,

By MONS. F. E. A. GASC, M.A. of Paris, and French Master of Brighton College.

Gasc's First French Book. Price 1s. 6d.

This work is partly based upon the system introduced by Ollendorf, and adopted by Dr. Ahn, but the arrangement is methodical, and proper attention is paid to the direct teaching of the Grammar.

Gasc's French Fables for Beginners, in Prose, with an Index of all the Words at the end of the book. Price 2s. Just published.

"Written in a purer and more modern style than other works of this class."—*Athenæum*.

Gasc's Second French Book: being a Grammar and Exercise Book, on a new plan, exhibiting the chief Peculiarities of the French Language as compared with the English, and intended as a Sequel to the First French Book. Price 2s. 6d.

Gasc's Materials for French Prose Composition: or, Selections from the best English Prose Writers, to be turned into French, with Idiomatic Renderings of Difficulties, and copious Grammatical Notes. New Edition. Price 2s. 6d. KEY, 6s.

"Students could not have a better book."—*Athenæum*.

Gasc's Histoires Amusantes et Instructives; or, Selections of Complete Modern Stories for Children. With copious Renderings, in foot-notes, of Idiomatic Difficulties. Price 2s. 6d.

Gasc's Practical Guide to Modern French CONVERSATION: containing the most frequent and useful Phrases, Every-day Talk, and Everybody's necessary Questions and Answers in Travel-Talk. Price 2s. 6d.

FOREIGN CLASSICS,

WITH ENGLISH NOTES FOR SCHOOLS. *Peap. 8vo.*

The attention of teachers is requested to this series of French Authors, which has been projected with the intention of supplying cheap and accurate editions of popular books, carefully prepared upon a scholar-like plan, with special reference to the wants of students. The principles of annotation which have been applied successfully to Greek and Latin Authors have been adopted, difficult constructions pointed out and explained, questions of grammar elucidated, difficult or idiomatic phrases rendered, where it can be done without spoiling the sense, by good idiomatic English, and throughout a comparison between the two languages is kept before the student, so that he may be led to remark the points in which the languages differ, and thus to gain a perception of their niceties. Phrases that are obsolete are also noted. It is believed that these Editions will be found better adapted for the purpose of instruction than any that have yet been published.

Aventures de Télémaque, par Fénelon.

Edited by C. DELILLE. Second Edition, revised. 4s. 6d.

Histoire de Charles XII., par Voltaire.

Edited by L. DIREY. Second Edition, revised. 3s. 6d.

Select Fables of La Fontaine. Edited by F. E. A. GASC, M.A. 3s.

Picciola, by X. B. Saintine. Edited by Dr. DUBUC. 2s. 6d.

A Complete Catalogue of Greek Verbs, IRREGULAR and DEFECTIVE. By J. S. BAIRD, T.C.D. 8vo. price 3s. 6d.

Notabilia Quædam, or, the Principal Tenses of such Irregular Greek Verbs and such Elementary Greek, Latin, and French Constructions as are of frequent occurrence. 8vo. 1s. 6d.

A Latin Grammar. By T. Hewitt Key, M.A. F.R.S., Professor of Comparative Grammar, and Head-Master of the Junior School in University College. Second Edition, revised. Post 8vo. 8s.

Professor Key's Short Latin Grammar for SCHOOLS. Third Edition. Post 8vo. 3s. 6d.

"Professor Key's Latin Grammar is highly honourable to English scholarship."—*Prof. Conington, in Appendix to Vaughan's Oxford Reform.*

BELL & DALDY'S Educational Books—continued.

Just ready, in 8vo.

A Text-Book on the Principles of Mechanics, APPLIED to CONSTRUCTION; including the Theories on the Strength of Materials, Roofs, Girders, Arches, Suspension Bridges, and Earthworks. By STEPHEN FENWICK, Esq., of the Royal Military Academy, Woolwich.

A First Cheque-Book for Latin Verse MAKERS. By the Rev. F. E. GRETTON, B.D., Head-Master of Stamford Grammar School, Author of 'Kochenda.' 1s. 6d. A KEY for Masters only, 2s. 6d.

Materials for Latin Prose Composition. By the Rev. P. FROST, M.A., late Fellow of St John's College, Cambridge. Second Edition. 12mo. 2s. 6d. A KEY, 4s.

Selections from Ovid: Amores, Tristia, Heroides, Metamorphoses. With English Notes by the Rev. A. J. MACLEANE, M.A. *Peap. 8vo.* 3s. 6d.

Sabrina Corolla in hortulis Regia Scholæ *Sapientia contereunt tres viri floribus legendis.* Editio altera. 8vo. 12s.; morocco, 21s.

Richmond Rules to form the Ovidian Dis-TICH, &c., with an Introductory Preface. By J. TATE, M.A. New Edition. 8vo. 1s. 6d.

The Elements of the English Language. By ERNEST ADAMS, Ph.D., Assistant-Master in University College School. Post 8vo. 4s.

"An admirable manual of our mother-tongue."—*Daily News.*

Dr. Richardson's Smaller Dictionary of the ENGLISH LANGUAGE: combining Explanations with Etymology.

A Series of Grammatical and Etymological Questions suited to the Dictionary, especially adapted to the Public Examinations in the English language, is prefixed. New Edition. 8vo. 15s.

Dr. Richardson on the Study of Language. An Exposition of Horne Tooke's 'Diversions of Purley.' *Peap. 8vo.* 4s. 6d.

This book is now used in preparing for Public Examinations.

The Student's Text-Book of English and GENERAL HISTORY, from a.c. 100 to the Present Time. With Genealogical Tables, and a sketch of the English Constitution. By D. BEALE. Fifth Edition. Post 8vo. 2s. 6d. cloth; 3s. sewed.

"We can award very high praise to a volume which may prove valuable to teachers and taught."—*Athenæum.*

A Practical Synopsis of English History; or, a General Summary of Dates and Events, for the Use of Schools or Private Families. By ARTHUR MOWES. Third Edition, enlarged. 8vo. 3s.

"An extremely useful little work. We strongly recommend it."—*Literary Gazette.*

COURSE OF INSTRUCTION FOR THE YOUNG.

By HORACE GRANT. 12mo.

Arithmetic for Young Children. 1s. 6d.

Arithmetic. Second Stage. 3s.

Exercises for the Improvement of the SENSES; for Young Children. 1s. 6d.

Geography for Young Children. 2s.

To the Geography and Second Stage of the Arithmetic is added a Biographical Notice of the Author, by EDWIN CHADWICK, C.B.

Brasse's Euclid.—The Enunciations and Figures belonging to the Propositions in the First Six and part of the Eleventh Books. *Peap. 8vo.* 1s.; in Case, 5s. 6d.; without the Figures, 4s.

Clarke's Copy-Books for Commercial SCHOOLS. Price 2d.; extra size on fine paper, 6d.

The First Copy-book contains elementary turns.—The Second contains large-hand letters, and the means by which such letters may be properly combined.—The Third contains large-hand words, commencing with undivided capitals.—The Fourth contains the essentials of a useful kind of small-hand.—The Fifth contains small-hand copies.—The Sixth contains the foundation of a style of small-hand adapted for females, moderately pointed.—The Seventh contains copies for females.

This Series is specially adapted for those who are preparing for commercial life. It is generally found when a boy leaves school that his writing is of such a character that it is some months before it is available for book-keeping or accounts. The special object of this Series of Copy-Books is to form his writing in such a style that he may be put to the work of a counting-house at once. By following this course from the first the writing is kept free and legible, whilst it avoids unnecessary flourishing.

Specimens of hand-writing after a short course may be seen on application to the Publishers.

In 8vo. price 2s. 6d. cloth,

THE THRESHOLD of ATRIDES.

By GEORGE F. PRESTON.
London: W. Kent & Co. Paternoster-row.

TURKISH LIFE and CHARACTER, by WALTER THORNBURY.—The latest Work on Turkey, contains Chapters on TURKISH MADHOUSES, PRISONS, BURIAL GROUNDS, MOSQUES, BAZAARS, SHOPS, STREET SIGHTS, &c.
London: published by Smith, Elder & Co.

Just published, *feap. 8vo.* with 6 Plates of rare and choice Examples, cloth, 5s.

A HAND-BOOK to ROMAN COINS. By FRED W. MADDEN, of the Medal Room, British Museum, Hon. Sec. of the Numismatic Society.

WINDSOR and ITS NEIGHBOURHOOD.
In 2 thick vols. royal 8vo. illustrated with many Engravings, cloth, reduced from 4s. 4s. to 1s. 1s.

ANNALS of WINDSOR: being a History of the Castle and Town; with some Account of Eton and Places adjacent. By R. A. TIGHE and J. E. DAVIS, Esqrs. 1858. 2s. An early application is necessary, as but few copies remain on sale.
London: John Russell Smith, 35, Soho-square.

THE ITALIAN QUESTION and the REPUBLICANS.

By JOSEPH MAZZINI.
London: Edinham Wilson, Royal Exchange.

Fourth Thousand, complete in 2 vols. *feap. 8vo.* cloth, price 10s.

A MANUAL of BRITISH BUTTERFLIES and MOTHS. By H. T. STANTON, F.L.S., Editor of 'The Entomologist's Annual.' This work contains descriptions of nearly 2,000 Species, interspersed with observations on their peculiarities and times of appearance, &c., and is illustrated with more than 200 Woodcuts.
John Van Voorst, 1, Paternoster-row.

Just published, *feap. 8vo.* 300 pp. cloth lettered, price 5s.

POEMS of REFLECTION, DESCRIPTION, and FRIENDSHIP. Part I. Sacred and Didactic.—Part II. Descriptive and Narrative.—Part III. A Tribute of Friendship to the Dead and the Living. By the Rev. JOHN GRAHAM, of Craven Chapel, London.
London: Judd & Glass, New Bridge-street, E.C.

In the press, and shortly will be published,
THE ANALYSIS of SENTENCES. By Rev. C. H. BROMLEY, M.A., Principal of the Normal College, Cheltenham.
Edinburgh: Adam & Charles Black.

Sixth Edition, price 4s. 6d., counters adapted to the same.
SYLLABIC SPELLING and READING. By Mrs. WILLIAMS, Author of the 'Conversations on Grammar.' With Copperplate Engravings. Revised and corrected by her Daughter, LADY LEIGHTON.
Whittaker & Co. Ave Maria-lane, London.

French Simplified and Condensed, Fifth Edition, 5s. 6d.

HOW TO SPEAK FRENCH; or, French and France: Facts, Rules, Practice. By A. ALBITES, LL.B., Paris, Edgemoor Proprietary School. "A true gem."—*Delile.* "Incomparably superior."—*Athenæum.* "Perfect."—*Edw.* "Most valuable, and extremely well adapted for self-instruction."—*The very best.*—*Arts & Gazette.* Longmans.

WATSON'S IMPROVED SCHOOL SERIES.

WATSON'S LESSON SHEETS, 20 x 14 inches, 1 to 16, each 2d.

Do. Do. Mounted on Eight Boards, each 1s.

WATSON'S FIRST BOOK of READING, 1½d.

WATSON'S SECOND BOOK of READING, 3d.

WATSON'S THIRD BOOK of READING and SPELLING, 1s.

WATSON'S CORRECT READER, with Vocabulary of Roots and Meanings, 2s.

WATSON'S RHETORICAL READER and SPEAKER, 2s. 6d.

WATSON'S MODEL RECITER, with Emphases and Phrases marked, 1s.

WATSON'S LESSONS in ARITHMETIC, for Beginners, 4d.

WATSON'S PUPIL-TEACHER'S HAND-BOOK, 1s.

The Publisher respectfully calls the attention of the Educational Public to his Series of READING BOOKS, as supplying a generally acknowledged want. The first two or three years' training in the art of Reading forms the habit or manner of Reading for the future. It is in learning to read that the style of reading is acquired. Great pains have therefore been bestowed in the construction of the Lessons in these Books. The principle is simple, progressive, and adapted to the gradual development of the reading voice.

In the Elementary Books purity and propriety of vowel sound, distinctness of articulation, firmness of utterance, and natural inflection of the voice, are continually kept in view. To the Reading Lessons of each day Lists of Words are prefixed, carefully accented and divided, so as to aid the quickness and accuracy of the child both in Pronunciation and Spelling. In the advanced Books, unlike nearly all those at present in use, the selections have been made not on account of the literary reputations of the authors of the pieces selected, but under the guidance of the necessary test that they possess the capability of being well voiced, and thereby developing the powers of the voice, subjects beyond the comprehension, or likely to strain the voice beyond the natural pitch or force, being carefully avoided. The Syllabicated Words furnish Lessons in Spelling and Syllabication, oral or written; derivation and definition; articulation and pronunciation. The matter of all the Lessons has been selected so as to foster the powers of thought and the moral and religious sense.

George Watson, Glasgow; W. Kent & Co. London.

Second Edition, post 8vo. cloth, 5s.

HYDROPATHY; or, HYGIENIC MEDICINE. By EDWARD W. LANE, M.A., M.D. Edin. Physician to the Establishment at Sudbrook Park, Richmond, Surrey.

"This is by far the clearest and most rational exposition that has yet been given to the English public of the principles of the method of medical treatment which owes its origin to Vincent Priessnitz."—*Examiner*.

"A book of consummate ability."—*Press*.
London: John Churchill, New Burlington-street.

Just published, in small 4to. sewed, price 1s.

A GARLAND OF SONGS; or, an ENGLISH LIEDERKRANZ. Edited by the Rev. C. S. BERE, Rector of Upliman, Tiverton, Devon. The Music of each Song is written in Mr. Curwen's Tonic Sol-fa, as well as in the usual Notation.

London: Aylott & Son, 8, Paternoster-row, Depot of the Church of England Book-Hawking Union.

Under the Special Patronage of H.R.H. the Prince Consort.

VALUABLE SCHOOL ATLASES, RECENTLY PUBLISHED BY TRÜBNER & CO.

DR. KARL VON SPRUNGER'S HISTORICO-GEOGRAPHICAL HAND-ATLAS: containing 25 coloured Maps, engraved on Copper Plates; 25 Maps devoted to the General History of Europe, and 4 Maps specially illustrative of the History of the British Isles. Cloth lettered, 18s.; or half-bound morocco, 11. 1s.

The deserved and widely-spread reputation which the Historical Atlas of Dr. Sprunger has attained in Germany has led to the publication of this English Edition, with the Author's co-operation and the authority of the German Publisher, Mr. Justus Perthes. Inasmuch as an inferior, unauthorized, and carelessly-prepared Atlas has recently appeared, in which Dr. Sprunger's Maps have been reproduced without reference to the copyright of the Author, or to the demand which the Public make for accuracy and fullness, it is necessary to be particular in specifying the 'Author's Edition.'

A detailed Prospectus, with a specimen Map, will be forwarded on application, on receipt of one postage-stamp.

Dr. T. MENKE.—ORBIS ANTIQUI DESCRIPTIO, for the Use of Schools: containing 16 Maps, engraved on Steel and coloured, with descriptive Letter-press. Half-bound morocco, price 2s.

London: Trübner & Co. 60, Paternoster-row.

A Key to Grotefend's Materials for Translation. 4s.

Döderlein's Handbook of Latin Synonyms. Translated from the German by the Rev. H. H. Arnold, B.A. Second Edition, revised. 12mo. 4s.

Rivingtons, Waterloo-place, London.

HAVET'S FRENCH CONVERSATIONAL METHOD.

"M. Havet's system obliges the pupil to learn almost in spite of himself, and to stock his memory with words and phrases belonging to our daily wants and avocations. The Conversations are most varied in subject, and range from the simplest construction to the most difficult idiom and the purest gallicism; yet the progress is so gradual, that a pupil with commonplace abilities must arrive at a good spoken knowledge of the French language."
Bristol Mirror.

I.—INTRODUCTION TO FRENCH.

264 crown 8vo. pages, 3s.

HAVET'S HOUSEHOLD FRENCH: 260 Conversations in French and English alternately, each Exercise consisting of Questions and Answers of every-day use; with a Dictionary of 10,000 Words and numerous Idioms.

"Cette véritable introduction à la langue française a pour titre *Household French*, autrement dit le *français familier*, le français de tous les jours, enfin le français qu'on parle... Bon nombre d'élèves en faisant leur cours, pourraient s'exprimer en langage plus ou moins académique, mais seraient dans l'impossibilité de causer des choses les plus usuelles et de donner un ordre à un domestique. C'est cette langue familière que le livre de M. Havet est destiné à leur apprendre, et nous croyons que rien n'a été négligé pour atteindre ce but." *Le Courrier de l'Europe.*

II.—A COMPANION TO ALL FRENCH GRAMMARS.

400 crown 8vo. pages, 5s. 6d.

HAVET'S FRENCH STUDIES: MODERN CONVERSATIONS on all the ordinary topics of life: EXERCISES to be done at sight; and READING LESSONS from Standard French Writers. New Edition, with a Dictionary of the Words and Idioms.

"This entirely new and original work must prove very useful to those persons who are anxious to speak French with fluency and correctness." *Manchester Examiner and Times.*
 "An admirable work, composed of Conversations, Reading Lessons, Questions and Exercises, all comprised in a very neat and portable form, and displaying much judgment and care."

"No student, making this his text-book, would pass through it without acquiring an excellent knowledge of the French language."
Monthly Scholastic Register.

"The Conversations are devoted to the topics most interesting to those who have occasion to visit France. The book is quite a model of the way in which a foreign language should be taught."
The Commonwealth.

"Cette nouvelle méthode, ouvrage consciencieux d'un professeur de mérite, met l'élève aux prises avec les différentes difficultés de la langue française, mais en lui en offrant la solution immédiate... Les morceaux, tous bien choisis, sont empruntés à nos meilleurs auteurs anciens et modernes."
Le Courrier de l'Europe.

London: W. Allan; Dulau & Co.; Simpkin, Marshall & Co.

J. H. DALLMEYER (Son-in-Law and Pupil of the late ANDREW ROSS)

Respectfully begs to inform the Scientific Public that he exclusively manufactures the **ASTRONOMICAL TELESCOPE** according to A. R.'s processes, who has also bequeathed to him the whole of that faculty.

RECENT RECOLLECTIONS

OF THE

**ANGLO-AMERICAN CHURCH IN THE
UNITED STATES.**

By an ENGLISH LAYMAN, five years resident in that Republic.

RIVINGTONS, Waterloo-place, London.

MR. J. D. HARDING'S NEW WORK.Just published, dedicated by special permission to Her Most Gracious Majesty the Queen, handsomely bound in cloth,
Four Guinea.

. One Thousand Copies only will be printed, when the Artist will himself destroy the Drawings on Stone.

PICTURESQUE SELECTIONS.

Drawn on Stone by J. D. HARDING, Author of 'Lessons on Art,' 'Elementary Art,' 'Principles and Practice of Art,' &c. Containing Thirty Drawings, on mounts, 22½ inches by 17½ inches.

Recent improvements in the appliances of Lithography have tempted Mr. Harding to produce the present work. His aim has been to give every Lithograph the freedom and the force, in short, the individuality, of an Original Drawing, in Black and White Chalk, upon Tinted Paper,—to open up the contents of his Portfolio, and to make them universal property.

London: W. KENT & Co. Paternoster-row; WINSOR & NEWTON, Rathbone-place;

The HON. FRANCIS SCOTT, Chairman.

CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory, and whilst we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

**WENHAM'S BINOCULAR
MICROSCOPE.**

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

**MALTWOOD'S FINDER FOR THE
MICROSCOPE.**

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent injections.

ICELAND SPAR,

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPIES.**GORHAM'S KALEIDOSCOPIIC
COLOUR TOP, &c.**

FREE ASSURANCE.

THE POLICIES OF THE

STANDARD LIFE ASSURANCE COMPANY are relieved from all Restrictions as to Residence Abroad (except in special cases); and they are otherwise so framed as to afford the most complete security in connection with Family Provisions, Marriage Settlements, Loan Transactions, and the various other purposes in connection with which the protection of Life Assurance is sought.

THE

STANDARD LIFE ASSURANCE COMPANY was established in 1835; and, during the last fourteen years, the annual Average of New Assurances has exceeded Half-a-Million sterling, being the largest business transacted in that period by any Life Assurance Company. The New Assurances effected in 1856 alone were upwards of 700,000. The business is a purely home business, the Company having no Agencies out of the United Kingdom.

Accumulated Fund.....£1,566,802 19 4

Annual Revenue.....\$394,161 18 7

THE SIXTH DIVISION OF PROFITS

was made on 9th May last, when it was reported that the Bonus Additions were at the rate of 150 per cent. on the sum assured on Policies effected in 1835; 100 per cent. on Policies effected in 1831; and 80 per cent. on Policies effected in 1840. Next Division of Profits in 1860.

THE INVESTIGATION REPORT,

showing these important advantages, is now ready, and may be had at the Office, or Agencies of the Company.

WILLIAM THOMSON, Manager.

H. JONES WILLIAMS, Resident Secretary.

London.....33, King William-street.

Edinburgh.....1, George-street (Head Office).

Dublin.....66, Upper Sackville-street.

Glasgow.....85, St. Vincent-place.

GOVERNMENT SECURITY LIFE POLICIES.

THE CONSOLS ASSOCIATION,

430, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.
2. It lends, or returns to Insurers ON DEMAND at any time, about One-Half of all Premiums paid.
Undoubted Security for Money, with a liberal Rate of Interest. The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
Full information may be obtained on application to
THOMAS H. BAYLIS, Managing Director.

LIFE ASSURANCE.—Special Notice.—The

next investigation into the Profits of the Life Department of the SCOTCH UNION INSURANCE COMPANY will be made as at last August, 1860, and parties taking out Policies before that date will participate in the division.

635 new Policies, for 304,700l., yielding 9,392l. 8s. 2d. of new Premiums, were issued during the year ending 1st August, 1860.

Thirty days' grace allowed to renew Life Insurances, and 15 days to renew Fire Insurances, during which time, on payment of the premium, the Company hold themselves liable.

No extra Premium charged for Members of Volunteer or Rifle Corps within the United Kingdom.

MUTUAL ASSURANCE WITHOUT INDIVIDUAL LIABILITY.

Extracts from the Report of the Directors for the Year 1860:—

Number of new Policies issued during the year, 928.

Assuring the sum of

Producing an Annual Income of

Making the total Annual Income, after deducting

ing 50,113l. annual abatement in Premium

Total number of Policies issued, 23,073.

Amount paid in Claims by the decease of Mem-

bers, from the commencement of the Institu-

tion in December, 1835

Amount of Accumulated Fund

The effect of the successful operation of the Society during the

whole period of its existence may be best exhibited by recapitu-

lating the declared surpluses at the four investigations made up

to this time.

For the 7 years ending 1845 the Surplus was 239,074 11 5

.. 7 years .. 1847 .. 26,128 6 8

.. 5 years .. 1853 .. 323,001 18 4

.. 5 years .. 1857 .. 345,084 3 11

The next Division of Profits will be made up to the 30th of

November, 1860. Policies effected prior to that date, if substituting

at the time of division, will participate in such profits for the time

they may have been in force.

The Prospectus, with the last Report of the Directors, and with

illustrations of the profits for the five years ending the 30th No-

vember, 1857, may be had on application, by which it will be seen

that the reductions on the premiums range from 11 per cent. to

28 1/2 per cent., and that in one instance the premium is extinct.

Instances of the bonuses are also shown.

Members whose premiums fall due on the 1st of JULY

are reminded that the same must be paid within thirty days

from that date.

June, 1861.

JOSEPH MARSH, Secretary.

THE SCOTTISH WIDOWS' FUND

AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue, and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS

AND REVENUE.

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED

2. TOTAL BONUSES DECLARED

3. SUMS ASSURED AND BONUSES EXISTING

4. TOTAL CLAIMS PAID EXCEED

5. INVESTED FUNDS

6. ANNUAL REVENUE

Forms of Proposal, detailed Prospectuses and Reports, and every information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALEIGH, Manager.

J. J. P. ANDERSON, Secretary.

Edinburgh, 5, St. Andrew-square.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of the Society's Agents, during the current year, will secure One Bonus more than those of later date.

The NEXT SESSION of the EDINBURGH ACADEMY will
commence on Tuesday, 1st October, at Ten o'clock, when Mr.
THOMPSON will OPEN the FIRST or JUNIOR CLASSES.
The Academy is an Institution in which Young Gentlemen from
Eight or Ten to Sixteen or Seventeen Years of age, and upwards,
receive a thorough Education in Classics, Modern Languages,
Mathematics, and English Literature.
Although the Academy is essentially a Classical Institution, a
Modern Side has been added to the School for the advantage of
Young Gentlemen who mean to enter the Military or Civil Ser-
vice, or to follow pursuits in which an extensive acquaintance
with the Classics is not required.
On SATURDAY, 28th, and MONDAY, 30th SEPTEMBER, attendance
will be given at the Academy, from Twelve to Three o'clock, for
the enrolment of New Pupils. Any additional information may
be obtained from Mr. PATRICK, Clerk to the Directors, No. 21,
St. Andrew-square, Edinburgh.

BOARDERS are received by
The Rector, 21, Great King-street;
Mr. Thompson, 3, Brandon-street;
Mr. Carmichael, 5, Saxe-Coburg-place; and
Mr. Macleod, Raeburn Cottage, Raeburn-place.

MILNER GIBSON TESTIMONIAL.

At a Meeting at Fendall's Hotel, on the 19th of July, in pur-
suance of Resolutions moved and seconded by Sir J. V. SHILLEY,
M.P., Sir CHARLES DOUGLAS, M.P., Mr. CORNLEY, M.P., Mr.
J. WHITE, M.P., and Mr. W. N. ASHURST, it was determined to
invite a PUBLIC COLLECTION towards a FUND for a TESTI-
MONIAL to the Right Honourable T. MILNER GIBSON, to
commemorate the Final Abolition of all Taxes on Literature and
the Press.

Chairman of the Committee, Mr. WILLIAM EWART, M.P.;
Treasurer, Mr. ROBERT CHAMBERS; Secretary, Mr. JOHN FRANCIS.

Gentlemen desirous of becoming Students must give satisfactory
testimony as to their education and conduct. They are required
to pay 40s. for the first year, 40s. for the second year, and 10s.
for every succeeding year of attendance; or 100l. in one payment en-
titles a Student to a Perpetual Ticket.

Dressers, Clinical Clerks, Ward Clerks, Obstetric Residents,
and Dispensers in the Eye-Wards, are selected according to merit
from those Students who have attended a second year. A Resident
House-Surgeon is appointed every six months from those Students
who have obtained the College Diploma.

Six Scholarships, varying in value from 20l. to 40l. each, will be
awarded at the close of each Summer Session, for general pro-
ficiency.

Two Gold Medals will be given by the Treasurer—one for Medi-
cine and one for Surgery.
A Voluntary Examination will take place at entrance, in Ele-
mentary Classics and Mathematics. The three first Candidates
will receive, respectively, 20l., 20l., and 10l.

Several of the Lecturers have vacancies for Resident Private
Pupils.
Mr. Stocker, Apothecary to Guy's Hospital, will enter Students,
and give any further information required.
Guy's Hospital, July, 1861.

Trübner & Co., London.
Little, Brown & Co., Boston.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The objects of the Association are—"To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

Reception Room, The Portico, Manchester, July, 1861.
The Local Committee of the British Association for the Advancement of Science announce that the MEETING for this year will be held in Manchester, and will commence on Wednesday the 6th of September next, under the Presidency of William Fairbairn, Esq., LL.D. F.R.S. &c.

On this occasion it is fully expected that there will be present many of the Corresponding Members of the Association, and a large number of British members, to all of whom the special inducements offered by the city of Manchester and its populous and industrious neighbourhood are well known. The time appointed for the Meeting has been arranged for the convenience of members of foreign as well as British Universities, and as the facilities for arriving in Manchester are now very complete, there is every reason to anticipate a meeting of unusual extent and interest. Both the general and local committees will exert themselves to make the visit of their associates on this occasion agreeable and satisfactory.

The Local Committee are preparing, amongst other arrangements for the entertainment of the Association, besides special lectures on some interesting branches of science and art, to be held in the Free Trade Hall, the following special exhibitions, viz.:

An exhibition illustrative of the history, progress and achievements of photographic art in its several branches, and photographic apparatus;
And a similar exhibition of telegraphic science and apparatus;

A very extensive exhibition of modern microscopes and microscopic objects;

And exhibits of specially interesting zoological, botanical and geological specimens, chemical products, philosophical apparatus and mechanical models;

Excursions to neighbouring localities of scientific or general interest will be provided for; and

Arrangements will be made for extensive access to establishments in the neighbourhood, where the opportunity will be offered to the members of seeing various branches of local industry and practical science in operation.

The Local Secretaries will be glad to be informed as early as may be convenient, of the names of any visitor to be present at the meeting, and on receiving the necessary (and timely) communication, will be happy to render such assistance as they can in arranging for visitors any lodging accommodation they may require.

The scientific business of the Meeting will be allotted in the under-mentioned Sections. The following gentlemen have undertaken to act as Secretaries of Local Sectional Committees until the commencement of the Meeting, and will be glad to receive communications relating to the business of their several departments:—

SECTION A.—MATHEMATICS AND PHYSICAL SCIENCE.

Professor R. B. Clifton, B.A., Owens College, Manchester.
Thomas Heelis, Esq., Princess-street, Manchester.

SECTION B.—CHEMICAL SCIENCE.

Professor H. E. Roscoe, B.A. Ph.D., Owens College, Manchester.
Robert Rumney, Esq., Ardwick, Manchester.

SECTION C.—GEOLOGY.

John Atkinson, Esq. F.G.S., Thelwall, near Warrington.
Rev. George Perkins, M.A., Dickinson Road, Rusholme, Manchester.

SECTION D.—ZOOLOGY AND BOTANY.

Thomas Alcock, Esq. M.D., Upper Brook-street, Manchester.
George Mosley, Esq. St. Peter's-square, Manchester.

SECTION E.—PHYSIOLOGY.

William Roberts, Esq. M.D., 126, Oxford-road, Manchester.
Thomas Windsor, Esq. M.R.C.S., Piccadilly, Manchester.

SECTION F.—GEOGRAPHY AND ETYMOLOGY.

Principal J. G. Greenwood, B.A., Owens College, Manchester.

SECTION G.—ECONOMIC SCIENCE AND STATISTICS.

Professor R. C. Christie, M.A., Owens College, Manchester.

SECTION H.—MECHANICAL SCIENCE.

John Robinson, Esq., The Atlas Works, Great Bridgewater-street, Manchester.

Communications intended for presentation to the Sections are expected to be forwarded in letters, addressed either to the Assistant General Secretary at The Portico, Manchester, or to one of the Secretaries of the Local Sectional Committees, pro tem.; and to be accompanied by a statement whereby the author will be present, and on what day, so that the business of the Sections may be satisfactorily arranged.

As the objects of the Association are specifically scientific, papers on subjects not so characterised, such as questions of history, biography, literature or art, however interesting, are necessarily inadmissible.

Gentlemen desirous of attending the meeting may make their choice of being proposed as life members, paying 10*l.* as a composition, or annual subscribers, paying an admission fee of 1*l.* and (additional) 1*l.* annually, or associates for the meeting, paying 1*l.* Ladies may become members on the same terms as gentlemen; and ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1*l.*

Life members receive gratuitously the Reports of the Association which may be published after the date of payment.

Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subscription, without interruption. Associates for the meeting are entitled to the Reports of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that applications for tickets should be made as early as possible. Forms of application will be supplied in the Reception Room during the meeting; or the names of candidates for admission may be transmitted to the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and arrears of former members, by the Local Treasurer.

New life members will receive the volume of Transactions for this and future years gratis, as will also annual subscribers during the continuance of their subscription.

For information respecting the local arrangements, application may be made by letter addressed to the Local Secretaries for the meeting, at The Portico, Manchester.

R. D. DARRISHIRE, M. Brown-street, Manchester.

ALFRED NIELD, Myfield, Manchester.

ARTHUR RANSOME, St. Peter's-square, Manchester.

H. E. ROSCOE, Owens College, Manchester.

Local Secretaries for the Meeting.

London: Longman, Green, Longman, and Roberts.

MR. ST. JOHN'S HISTORY of ENGLAND, FROM B.C. 55 TO A.D. 1607.

Nearly ready, 2 vols. 8vo.

HISTORY of the FOUR CONQUESTS of ENGLAND: Roman, Anglo-Saxon, Danish, and Norman. By JAMES AUGUSTUS ST. JOHN. The Author has availed himself of the valuable information on important points of English History afforded by the Charters published by direction of the Master of the Rolls. Smith, Elder & Co. 65, Cornhill.

VALUABLE SCHOOL ATLASES, RECENTLY PUBLISHED BY TRÜBNER & CO.

DR. KARL VON SPRUNGER'S HISTORICO-GEOGRAPHICAL HAND-ATLAS; containing 26 coloured Maps, engraved on Copper Plates: 24 Maps devoted to the General History of Europe, and 2 Maps specially illustrative of the History of the British Isles. Cloth lettered, 18s.; or half-bound morocco, 11. 1s.

The deserved and widely-spread reputation which the Historical Atlas of Dr. Springer has attained in Germany has led to the publication of this English Edition, with the Author's co-operation and the authority of the German Publisher, Mr. Justus Perthes. Inasmuch as an inferior, unauthorised, and carelessly-prepared Atlas has recently appeared, in which Dr. Springer's Maps have been reproduced without reference to the copyright of the Author, or to the demand which the Public make for accuracy and fulness, it is necessary to be particular in specifying the 'Author's Edition.'

A detailed Prospectus, with a specimen Map, will be forwarded on application, on receipt of one postage-stamp.

Dr. T. MENKE.—ORBIS ANTIQUI DESCRIPTIO, for the Use of Schools; containing 16 Maps, engraved on Steel and coloured, with descriptive Letter-press. Half-bound morocco, price 4s.

London: Trübner & Co. 60, Paternoster-row.

This Day,

A COMPLETE HANDBOOK OF THE AMERICAN WAR.

In One Volume, post 8vo. cloth, with Coloured Map, and numerous Appendices of State Papers, Population, New and Old Tariffs, and other Commercial Returns, price 6s. 6d.

SLAVERY AND SECESSION:

HISTORICAL and ECONOMICAL.

By THOMAS ELLISON, Esq. F.S.S., of Liverpool, Author of 'A Handbook of the Cotton Trade.'

"Abounds with impartial and simply authenticated information. It is a volume that was much wanted, and one which we can highly recommend."

Daily News, July 22.

"Whilst little of importance has been omitted, the facts and dates and party evolutions, which it is so difficult to recall in their true sequence, are all recorded in a fashion which refreshes the memory without encumbering it with verbiage or irrelevant special pleading."

Spectator, July 13.

"Meanwhile, we can recommend to all Mr. Ellison's carefully prepared work.... It is a model of typography, and its tabular estimates of comparative areas, population, commerce, &c., in the Northern and Southern States, worthy of a Fellow of the Statistical Society."

Literary Gazette.

"A book that fulfils the desire of all who wish to obtain correct information on the state of things in America."

Liverpool Daily Post.

London: SAMPSON LOW, SON & CO.
47, Ludgate-hill.

Now Ready,

The Cheapest Book ever Published.

Adapted for Library or College Reference, comprising 40,000 Words more than Johnson's Dictionary, and 250 pages more than the Quarto Edition of Webster's Dictionary.

DR. WORCESTER'S NEW AND GREATLY ENLARGED DICTIONARY OF THE ENGLISH LANGUAGE.

In One Volume, royal 4to. cloth, 1834 pp. price 31s. 6d.

"The volumes before us show a vast amount of diligence; but with Webster it is diligence in combination with fancifulness,—with Worcester in combination with good sense and judgment. Worcester's is the soberer and the safer book, and may be pronounced the best existing English Lexicon."—*Athenæum*, July 12, 1861.

"We have devoted a very considerable amount of time and labour to the examination of 'Worcester's Quarto Dictionary of the English Language,' and we have risen from the task with feelings of no ordinary satisfaction at the result, and admiration of the care, scholarship, philosophical method, and honest fidelity of which this noble work bears the impress upon every page.... As a complete and faithful dictionary of our language in its present state, satisfying to the full those requirements the fulfilment of which we have laid down as essential to such a work, we know no work that can bear comparison with it."

Literary Gazette.

"We will now take leave of this magnificent monument of patient toil, careful research, judicious selection, and magnanimous self-denial (for it requires great self-denial to abstain from undesired originality), with a hearty wish for its success. It is sad to think that the result of so much labour, from which Hercules, had he been intellectually inclined, would have shrunk appalled, should be barren fame; yet we can easily believe that Dr. Worcester (as he says) expects no adequate pecuniary compensation for his gigantic undertaking; for it is difficult to imagine a sum which could adequately compensate the man who has produced the completest and the cheapest English Dictionary which the world has yet seen."—*Critic*.

London: SAMPSON LOW, SON & CO.
47, Ludgate-hill.

NEW AND GREATLY IMPROVED EDITIONS OF DR. M'CULLOCH'S READING-BOOKS FOR SCHOOLS.

FIRST READING-BOOK	1½d.
SECOND READING-BOOK	3d.
THIRD READING-BOOK	10d.
FOURTH READING-BOOK and SYNOPSIS of SPELLING	1s. 6d.
SERIES of LESSONS in PROSE and VERSE	2s.
COURSE of ELEMENTARY READING in SCIENCE and LITERATURE	3s.

These Books are intended for the use of schools where the general mental culture of the pupil, as well as his proficiency in the art of reading, is studiously and systematically aimed at.

They form, collectively, a progressive Series, so constructed and graduated as to conduct the pupil, by regular stages, from the elementary sounds of the language to its highest and most complex forms of speech; and each separate Book is also progressively arranged,—the lessons which are more easily read and understood always taking the lead, and preparing the way for those of greater difficulty.

The subject-matter of the Books is purposely miscellaneous. Yet it is always of a character to excite the interest and enlarge the knowledge of the reader. And with the design of more effectually promoting his mental growth and nurture, the various topics are introduced in an order conformable to that in which the chief faculties of the juvenile mind are usually developed.

That the moral feelings of the pupil may not be without their proper stimulus and nutriment, the lessons are pervaded throughout by the religious and Christian elements.

The Publishers confidently invite the attention of Teachers to the New Editions of these works, in the belief that, after the thorough revision to which they have just been subjected by the Author, they will be found to be in all respects adapted to the present advanced state of Education.

The FIRST and SECOND READING-BOOKS consist, as before, of lessons on the elementary sounds of the language; but they have been enlarged for the purpose of introducing additional exercises, and thereby facilitating the acquirement of the first elements of reading.

The THIRD READING-BOOK has undergone some changes both in its contents and in its arrangement, in order to render the lessons more interesting in themselves and more gradual in their sequence.

The FOURTH READING-BOOK supplies a gap, previously existing between the THIRD BOOK and the SERIES of LESSONS. Being intended for the use of the pupil at a stage of his progress when he needs to be exercised chiefly in reading, without having his attention constantly distracted by questions on the import of what he reads, it contains only such lessons as are suited to his unaided understanding. Fables, Tales, Allegories, and other compositions of a character at once interesting and self-interpreting. A Synopsis of Spelling is appended.

The SERIES of LESSONS comes next in order; and in the New Edition it has been not only revised and corrected, but to a considerable extent recast. Obsolete lessons have been cancelled; those which are retained have been amended; and new ones have been introduced of a nature and style adapted to the educational requirements of the day. The whole contents moreover are so graduated in respect both of expression and of thought as to form an appropriate sequel to the FOURTH BOOK, and a suitable introduction to the COURSE of ELEMENTARY READING in SCIENCE and LITERATURE.

In the New Edition of this last-named work—the COURSE—the changes introduced for the purpose of bringing it into harmony with the progress of knowledge and the altered conditions of education are on so extensive a scale that they amount to little short of an entire reconstruction of the work. As before, however, the greater part of the book consists of lessons on Natural History, the Physical Sciences, Geography and Astronomy, and the Christian Religion; though on most, if not all, of these lessons material changes have been made, in order to render them at once more consecutive and more comprehensive. Among the subjects introduced for the first time are a series of lessons on Electricity and the Electric Telegraph, on Language and Literature, and on the Phenomena of Industrial Life (such as Prices, Wages, Strikes, &c.). The Miscellaneous Lessons have been remodelled so as to supply a greater amount and variety of interesting and agreeable reading. And in the Poetical department, specimens are given, in chronological order, of all our great poets from Spenser to Tennyson, along with examples of style in prose, in which the same subject is handled by different poets. A Vocabulary of Scientific Terms has been added for the use both of teachers and of pupils.

* * * The New Editions may now be had from any Bookseller, except of the "First" and "Second" Books, which will be issued shortly. All the Old Editions will, for the convenience of Schools, be kept on sale for a limited time.

Edinburgh: OLIVER & BOYD.
London: SIMPKIN, MARSHALL & CO.

MR. BENTLEY'S LIST OF NEW BOOKS FOR AUGUST.

CONSUL HODGSON.

A RESIDENCE at NAGASAKI and HAKODATI in 1859-60. With an Account of Japan generally. By CONSUL HODGSON. To which are added, a Series of Letters on Japan, by HIS WIFE. 8vo. with Illustrations. *Immediately.*

J. HENEAGE JESSE.—MEMOIRS of KING RICHARD the THIRD and SOME of his CONTEMPORARIES. By J. HENEAGE JESSE, Author of 'The Court of England under the Stuarts,' &c. 8vo. with an Illustration. *Immediately.*

C. E. FRANCATELLI.—The COOK'S GUIDE and HOUSEKEEPER and BUTLER'S ASSISTANT: a Practical Treatise on English and Foreign Cookery in all its Branches, and also Instructions for Pickling and Preserving Vegetables, Fruits, Game, &c.; the Curing of Hams and Bacon; the Art of Confectionery and Ice-making, and the Arrangement of Desserts. By CHARLES ELMÉ FRANCATELLI, Author of 'The Modern Cook.' Small 8vo. with Illustrations. 5s. *Immediately.*

MEMOIRS of MY OWN TIME. By M. GUIZOT. Containing a Narrative of the Events at the Critical Period of the Eastern Question. Vol. IV. 8vo. 14s. *Now ready.*

"These Memoirs form a most valuable addition to the history of the time."—*Spectator*.
"This volume is most interesting. It deals with all the great European events from 1830 to 1840."—*Observer*.

NEW STORY OF SOCIAL LIFE.

EAST LYNNE. By the Author of 'Ashley.' 3 vols. poet 8vo. *Immediately.*

A REPLY to the OBSERVATIONS in the QUARTERLY REVIEW on THE AUTOBIOGRAPHY of LORD DUNDONALD. By MARCUS. 8vo. with Charts. *Immediately.*

The Hon. Mrs. YELVERTON'S 'MARTYRS to CIRCUMSTANCE.' Second and Concluding Parts, price 3s.

Dr. MARSHALL HALL.—BIOGRAPHICAL MEMOIRS of MARSHALL HALL, M.D. F.R.S., Corresponding Member of the Institute of France, and Foreign Associate of the Academy of Paris. By HIS WIDOW. 8vo. with a Portrait. 14s. *Now ready.*

"This work cannot fail to command respect and sympathy, not less for the sentiments which animate the Author, than for the many interesting facts it contains relative to a public benefactor, an able physician, an accomplished gentleman, a thoroughly good-hearted man."—*Observer*.

JOHN HUSS and JEROME OF PRAGUE.

The LIFE and TIMES of CARDINAL JULIAN, the LAST CRUSADER. By the Rev. ROBERT CHARLES JENKINS, Rector of Lymington, Kent. 8vo. 14s. *Now ready.*

"Soberly and truthfully written. The times in which the Cardinal lived, and upon which his strong mind made a marked impression, were very full of incidents. The book has solid value, and deserves close attention."—*Examiner*.

POPULAR ANSWERS to "ESSAYS and REVIEWS." Being Lectures delivered in various Places. By the Rev. Dr. CUMING. Small 8vo. 4s. *Just published.*

NEW MODERN SEA STORY.

VONVED the DANE, the ROVER of the BALTIC. 2 vols. *Now ready.*

"This is a great book, both in conception and execution. The Author possesses a rare faculty of exciting and arresting attention. In its own school this story has no rival. Victor Hugo might be proud to have written some of its chapters, than which he has never written anything more thrilling or more terrible."—*Morning Post*.

NEW VOLUME of 'BENTLEY'S STANDARD NOVELS,' The SEMI-ATTACHED COUPLE.

By the Author of 'The Semi-Detached House.' Price 2s. 6d.; cloth gilt, 3s.

THE HON. MRS. YELVERTON.

MARTYRS to CIRCUMSTANCE. By the Hon. Mrs. YELVERTON. Part I. Seventh Thousand. Price 3s.

With Four Plans and a Portrait, price 5s.

LORD DUNDONALD'S AUTOBIOGRAPHY.—A Library Edition may be had, in 3 vols. 8vo. 25s.

"This thrilling narrative will be read with interest as long as England possesses a navy, and ought to be a prize-book in every school in England."—*London Review*.

PRIVATE CORRESPONDENCE of the DUKE of WELLINGTON with Mr. RAikes, from the Year 1830 to 1847. To which are added, Letters from Lord Alvanley, Beau Brummell, and other distinguished Contemporaries. Edited by MISS RAIKES. 8vo. 14s.

"More interesting than the Diary."—*Athenæum*.

Now ready, in 8vo. price 14s.

The LIFE and OPINIONS of CHARLES, SECOND EARL GREY. By Major-Gen. the Hon. CHARLES GREY.

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

18, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Narrative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s.

A SAUNTER THROUGH the WEST. END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"The title of this work is unexceptionable: it is happily and appropriately chosen to denote the gossiping contents of the book—light, chatty, and amusing. The author quietly puts his arm in that of his reader, and, as he passes on from Hyde-park Corner down Piccadilly or Pall Mall to the Haymarket and Soho, points out the anecdotes connected with each locality. Touches of quiet, genial humour, playful interruptions and amusing stories told in a quaint, unaffected style contribute to the attractive conversational tone adopted, as he saunters along with his friend of the hour. The reader will find himself agreeably carried on from the first to the last page of the 'Saunter' by its cheerful tone and entertaining gossip."—*Literary Gazette*.

"Few men felt, as Leigh Hunt did, the human poetry of the old memories that crowd upon the lettered and thoughtful wanderer about London streets. His gentle, genial humour shines always in a book like this—worthy companion to his 'Town' and 'Old Court Suburb.'"—*Examiner*.

"If any of our readers are in want of a genuine gossiping volume, written by one who was deservedly a favourite in the world of letters, we can recommend them Leigh Hunt's very pleasant 'Saunter.' It will suit town or country readers equally well."—*Orific*.

"There are few pleasanter companions for a wanderer through the West End than the gossiping, tasteful, cultured and kindly man, whose very name will endear this book to thousands of intelligent readers."—*Spectator*.

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 2 vols. with Portraits. 21s.

JAVA; or, How to Manage a Colony:

Showing a Practical Solution of the Questions now affecting British India. By J. W. B. MONEY, Esq. 2 vols. 21s.

NOTHING NEW. By the Author of

'JOHN HALIFAX, GENTLEMAN.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of HURST & BLACKETT'S GRAND LIBRARY OF CHIEF EDITORS OF POPULAR MODERN WORKS. 5s. bound.

THE SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHALLICE. 2 vols. with Portraits. 21s. *Just ready.*

COLBURN'S UNITED SERVICE

MAGAZINE and NAVAL and MILITARY JOURNAL, for AUGUST, contains:—The New Ministries for War—Naval Reserve Officers—The Future of Cavalry—India and its Star—Uniform of Engineer Officers—Marching Soldiers—Medical Officers in Ceylon—Movements of our Neighbour—The Indian Army—Reform at Greenwich Hospital—Volunteers in England and in America—Dover and Alderney Harbours—The Portsmouth Armour Plates—The National Rifle Contest at Wimbledon—Soldiering in the Jungle—The Prospects of Turkey—Adventures on the African Coast—Correspondence—Gazettes, &c.

THE NEW NOVELS.

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

"A good novel. The story is very ingeniously constructed, and the interest is completely sustained throughout. All the characters are vigorously and consistently drawn, and the part sustained by each is natural and appropriate. Lastly, Mr. Cook has been singularly happy in his choice of a heroine. It is long since we have met in a work of fiction with a more charming creation than Sylvia Foster."—*Spectator*.

"Mr. Cook belongs to the Charles Dickens school of literature, in which variety, liveliness, and power of working on the affections are the prominent features. The story of 'Paul Foster's Daughter' is very interesting. Sylvia is one of the most charming creations with which fiction has for a long time presented us."—*Lit. Gaz.*

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON.' 3 vols.

"The Author of 'A Family History' betrays no falling away from the vigorous promise of her former work. It is a specimen of its class of far more than average excellence. The story exercises a fascination over us, and we take leave of this very agreeable authoress with the wish that we may often enjoy the fruit of her pleasant, facile, and attractive pen."—*Critic*.

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONEY,' 'WILDFLOWERS,' &c. 3 vols.

"The best story hitherto written by a very pleasant novelist. It is throughout a good story—rapid and rich in incident—that nobody will leave unfinished."—*Examiner*.

HOMELESS; or, a Poet's Inner Life.

By M. GOLDSCHMIDT, Author of 'JACOB BENDIKEN.' 3 v.

ALONE in the WORLD. By the

Author of 'COUSIN GEOFFREY,' &c. 3 vols. *Next week.*

Now ready, with Eight Illustrations, demy 8vo. price 16s. cloth,

JAPAN, the AMOOR, and the PA-CIFIC; with Notices of other Places comprised in a Voyage of Circumnavigation in the Imperial Russian Corvette "Rynda," in 1859-60. By HENRY ARTHUR TILLEY.

"Mr. Tilley describes everything in clear and simple language; moreover, his accounts are remarkably correct, as we can testify in many instances from personal knowledge."—*Athenæum*.

"Mr. Tilley has turned his stay in Japanese towns to such advantage, that his account of their life and scenes is richer and fuller than any previously given to us, and will be read with extreme interest. The reader follows the author in pleasant companionship, convinced that wherever it brought him, it brought a gentleman, and a man of good sense and feeling."—*London Review*.

"This is a lively and pleasant volume of travels. We commend it to the attention of the general reader who seeks information combined with amusement."—*Sun*.

"We accept Mr. Tilley's narrative as an agreeable and amusing addition to our Anglo-Japanese literature. The work is one likely to meet with many readers, since it has the great charm being vivacious, picturesque and amusing."—*Chino Telegraph*.

"In Japan the author resided for more than three months, every day of which he was moving among the people, and judging from the result of his observations as here recorded, he was no careless nor unperceptive looker on, and consequently has been enabled to give to the public additional knowledge of that most remarkable country and its inhabitants. The remainder of the work, and that part which especially relates to Japan, and the author's narrative of his visits to Tahiti and other islands of the Pacific, are well put together, with an absence of pretension and a simplicity of style which are not only agreeable in themselves, but tend very much towards faith in the authenticity and value of what has been set down."—*Illustrated London News*.

"One great merit of Mr. Tilley is the genial kindness with which he welcomes all his relations of the great human family—an important element in the interest of a book of travel. The Russian colonies are carefully described, and some valuable hints are given as to the prospective value of these possessions to Russia. The lithographic illustrations with which Mr. Tilley's book is adorned give us a very pleasant idea of Japanese homes."—*John Bull*.

SMITH, ELDER & CO. 65, Cornhill.

Now ready, with Illustrations by Harrison Weir, crown 8vo. price 5s. cloth,

The BOOK of GOOD COUNSELS:

Being an Abridged Translation of the Sanskrit Classic, the 'Hitopadesa.' By EDWIN ARNOLD, M.A. Oxon.

In his Preface to this work, the Author remarks—"The 'Hitopadesa' is a work of high antiquity and extended popularity. The prose is doubtless as old as our own era, but the interpolated verses and proverbs are a selection from writings of an age extremely remote. The *Mahabharata* and the textual *Veda* are of those quoted; to the first of which Professor M. Williams assigns a date of 350 B.C., while he claims for the *Rig Veda* an antiquity as high as 1300 B.C. The 'Hitopadesa' may thus be fairly styled 'The Father of all Fables;' for from its numerous translations have come *Æsop* and *Pilpay*, and in later days *Reynolds Fables*. Originally compiled in Sanskrit, it was rendered, by order of Nushiravan, in the sixth century A.D., into Persian. From the Persian it passed, A.D. 850, into the Arabic, and thence into Hebrew and Greek. In its own land it obtained as wide a circulation. The Emperor Akbar, impressed with the wisdom of its maxims and the ingenuity of its apophorems, commended the work of translating it to his own Vizier, Abdul Fazel. To this day, in India, the 'Hitopadesa,' under other names, retains the delighted attention of young and old, and has some representative in all the Indian vernaculars. A work so well esteemed in the East cannot be unwelcome to Western readers, who receive it here, a condensed but faithful transcript of sense and manner."

"This curious and interesting volume consists of a translation of a collection of Sanskrit fables, which are evolved one from another almost interminably. They are for the most part very ingenious, and we recognize among them several of the originals of those with which we are familiar in the works of *Æsop*, and other later fabulists."—*Spectator*.

"Mr. Arnold is entitled to attention, not as the fourth translator, but as the first popularizer of the book in a shape closely resembling the original. Deliciously bewildering is the way in which one story contains another, and that another, and that another, after the manner of the nested apples of the toymaker; while as for innocent complete, they are paraphrased and condensed into English with a sense of good literature, and a briskness of wit that make them, however much at odds with English ways of writing, anything but tedious. For an awakened sense of the wit and wisdom of the 'Hitopadesa,' popular and yet scholarly, the English reader is indebted in no small degree to Mr. Arnold."—*Examiner*.

"No description can give an adequate idea of the ability with which Mr. Arnold has made the old Indian writer an agreeable and welcome guest in every English family. * * A new and valuable contribution to English literature has been made in this translation from the 'Hitopadesa.' The book is illustrated by the clever animal engraver, Mr. Weir, in a manner worthy of his well-established reputation."—*London Review*.

SMITH, ELDER & CO. 65, Cornhill.

Now Ready, in 4 Vols. demy 8vo. 2s. 2s. cloth,

The LIFE of MAHOMET. With

Introductory Chapters on the Original Sources for the Biography of Mahomet, and on the Pre-Islamite History of Arabia. By WILLIAM MUIB, Esq., Bengal Civil Service.

(Vols. III. and IV. may be had separately, price 11s.)

SMITH, ELDER & CO. 65, Cornhill.

LONDON, SATURDAY, AUGUST 3, 1861.

LITERATURE

Memoirs of Marshall Hall, M.D. By his Widow. (Bentley.)

Marshall Hall deserved a written history of the very best kind. With all his faults of temper and discretion, of sensitiveness and egotism, he was not less an amiable man than a scientific inquirer with an intellect of noble proportions and lofty aim. In the world of physiological science he may fairly be ranked as the companion of Harvey and Bell; and if it were not invidious to draw comparisons between the master minds of modern investigation, it might be maintained that in respect of self-dependence and originality of thought, the discovery of the Diastaltic Spinal System merits a more liberal applause than that of the Circulation of the Blood, or than that of the division of the cerebral nerves into nerves of Volition and nerves of Sensation. Of course, the discovery of the True Spinal Marrow was led up to by prior speculations and observations. The circulation of the blood between the heart and the lungs had been described before Harvey made his splendid advance. Previous to Sir Charles Bell's dissections of the motor and sensitive nerves of the head and neck, Alexander Walker had promulgated the doctrine that the spinal canal sent forth separate nerves of sensation and volition. In the same manner, Marshall Hall was not without precursors vaguely striving after the truth, which he was the first to grasp securely and reveal to his companions. Haller, Whytt, Redi, Blane, and Prochaska had all directed attention to reflex nervous acts, but until Marshall Hall came to crack the round of the egg, reflex nervous function was not even a matter of conjecture. Dr. Hall was, therefore, a great originator, doing for the spinal marrow what Harvey had done for the sanguineous circulation and Sir Charles Bell had effected for the cerebral nerves. Of all the physicians of the present generation, he was emphatically the hero of medicine,—fearless and indefatigable in inquiry, free from even a taint of prejudice, with intellectual sympathies so large and universal that passionate enthusiasm for physiological investigation could not contract them. He was, moreover, a keen observer, a brilliant talker, and a man whose sense of honour was as delicate as his benevolence and piety were sincere and earnest. Such a person deserved no ordinary memoir. As one of the few Men of the Time who will be of interest in *future times*, his career ought to be fully and worthily portrayed before contemporary evidence is, like his voice, silent in the grave.

Of Mrs. Hall we wish to speak with respect. Her labour has been one of pious love, and now that she offers its result to the public, she does so with an avowal that no one can be more aware than herself of its great deficiencies. She tells us that at one time she hoped her husband's memory would have enjoyed a fitting chronicler in "an able physiologist." Missing such an historian, the Doctor will be handed down to posterity by an affectionate and idolizing wife, a memorial of domestic love being raised on the ground which ought to be occupied by a monument of historic significance. In this consideration lies the objection to the present memoir. Wives should honour their husbands, not write their biographies. With pen in hand delicacy will restrain them from saying much that ought to be said,—much that they only know and dare not in their own per-

sons say, but could with propriety and benefit communicate to writers less intimately connected with the objects of biographic portraiture. No woman can be supposed to speak of a departed husband with impartiality. To criticize a dead man's failings would in a widow be indecent; and when she praises him, though her words fall within the strictest limits of truth, those whom she addresses will invariably make large deductions from their proper significance in consideration of the personal devotion which is presumed to inspire them. To carry full weight with the public, a biographer must impress his readers that he is a faithful witness, and not an advocate. The historian of a life, like the narrator of any story of public events, must seek permanent influence by creating a belief in his moderation and credibility. Such influence a wife speaking in behalf of, or against, her husband can never obtain. The reasons which deprive her testimony of force in a court of law, weaken it in the jurisdiction of literature. Moreover, another grave objection to the biographic testimony of a wife is that, apart from conjugal affection, it must necessarily labour under the suspicion of being one-sided and incomplete. What woman knows all the life of her husband—every turn and winding of his professional contentions? There must be much in the career of every man playing a prominent part in the drama of life, which he either cannot or will not impart without reserve or change of colouring to his wife, and yet which she is not likely to learn from any other source. The principal causes which disqualify a widow as her husband's biographer are therefore three:—much that she knows, and which ought to be told, she is prohibited by wifely duty from saying; that which she knows and does say loses half its effect when she says it; and much that ought to be said, she is not likely to know.

Born at Basford, near Nottingham, on the 18th of February, 1790, Dr. Marshall Hall used to reckon his age by adding ten to the current year of the present century. Descended from the family of Hall of Grantham, whose pedigrees may be found in the *Heralds' College*, he was the son of Robert Hall, a cotton-manufacturer and bleacher, who was well known and much respected in the counties of Nottingham and Lincoln. Neither wealthy nor highly educated, this gentleman was remarkable for integrity, benevolence, and active intelligence. A correspondent of John Wesley, he occupied a conspicuous position amongst a section of religionists little favoured by the surrounding gentry. In the year 1797, on the separation of the Methodists, Mr. Hall was attached to the "New Party," which was supposed to be disaffected to the Government. The division of the Methodists and Mr. Hall's adherence to the Reform party were matters of sufficient importance to arrest for a moment the attention of the House of Commons, when in answer to some observations made, Mr. Robert Smith, afterwards Lord Carrington and then M.P. for Nottingham, rose and said—"As long as that gentleman (Mr. Robert Hall) is connected with the disaffected body, all will be safe and right; there will be nothing wrong." Thus respected by the local gentry, Mr. Hall was at the same time so favourably regarded by the populace, that when the Luddite riots were at their height, he received a letter from "Ned Lud," assuring him that not a hair on his head should be touched. Mr. Robert Hall's chief claim to recognition by the present generation, however, rests on the fact that he was the first English bleacher to use chlorine to whiten his

cotton. Immediately on Berthollet's discovery that this gas would discharge vegetable colours, it occurred to Mr. Hall that its employment in cotton-bleaching might be substituted for the tedious and cumbrous process of exposure to light and air. He submitted his thought to Dr. Priestley and Mr. Henry of Manchester, but they did not encourage him to act upon it. When the leading chemists of the day thus entertained his proposition, it is not to be wondered at that his illiterate neighbours ridiculed it. Nothing dismayed, Mr. Hall carried out his experiments on a scale that induced derisive spectators to designate his factory "Bedlam." A brief period, however, resulting in success, taught his deriders that they had exercised without due caution the privilege of folly:—

"Prof. Liebig, in his 'Letters on Chemistry,' thus alludes to it as an object of national importance, and as one of the links upon which the maintenance of our colossal manufacturing system depends:—But for this new bleaching process, it would scarcely have been possible for the cotton manufacture of Great Britain to have attained its present enormous extent—it could not have competed in prices with France and Germany. In the old process of bleaching, every piece must be exposed to the air and light during several weeks in the summer, and kept continually moist by manual labour. For this purpose meadow land, eligibly situated, was essential. Now, a single establishment near Glasgow bleaches 1400 pieces of cotton daily, throughout the year. What an enormous capital would be required to purchase land for this purpose! How greatly it would increase the cost of bleaching to pay interest upon this capital, or to hire so much land in England! This expense would have been scarcely felt in Germany. Besides the diminished expense, the cotton stuffs bleached with chlorine suffer less, in the hands of skilful workmen, than those bleached in the sun; and already the peasantry in some parts of Germany have adopted it and find it advantageous."

The sixth of eight children, Marshall Hall, in early childhood manifested force of character in his curiosity about theological mysteries—in his fondness for reading such works of imagination as 'The Pilgrim's Progress,' 'Robinson Crusoe,' and the 'Arabian Nights,' and in the ease with which he learned by heart the chapters of the Bible which his pious father required him to commit to memory. The child's preliminary education was not a liberal one. At the academy of the Rev. J. Blanchard, of Nottingham—the same school at which Henry Kirke White was educated—he received the rudiments of an English education, and learned French, till he was fourteen years of age, when he was taken from his studies, and apprenticed to Mr. Moor, a chemist of Newark. Whilst at Newark he became sensible of his want of education, and, young as he was, he resolutely set to work to master the difficulties of the Latin Accidence. Soon he was able to write Latin exercises, which he regularly sent over once a week to his friend the Rev. Robert Almond, then curate of Basford, for criticism and correction. He found time also to acquire some facility as a flutist. The boy was seen to be ambitious,—fretting against his position,—bent on rising in the world, and ready to make all the exertions and sacrifices necessary for such a rise. One morning a friend found him at work before daybreak over his medical and chemical books. "I am determined to be a great man," cried the boy, when his friend expressed surprise at finding him thus engaged. Robert Hall, in due course, saw that the boy had a sound foundation for his ambition,—that his resolve to distinguish himself was no mere restless craving

of vanity. It was therefore decided that young Marshall should go to Edinburgh and study medicine,—and thither he went, in 1809, when nineteen years of age.

Early and late the zealous student worked. At night he toiled at his books, and at early dawn he was in the dissecting-rooms. In the same spirit he regularly assisted Dr. Andrew Fyfe in getting the preparations "ready for demonstration to the anatomy class." "There will be no one there," the students soon became accustomed to say to each other, "but the student with the brown greatcoat on, assisting Fyfe to dissect the preparations for demonstration." At Edinburgh, too, the industrious student "in the brown greatcoat" commenced his career of authorship, publishing several papers on 'Chemistry' in *Nicholson's Journal*, and sending contributions to the *Edinburgh Medical and Surgical Journal*. He mixed but little in undergraduate society; but the esteem in which he was held by his fellow-students may be judged of by the fact that, with a very large majority of votes, he was, in 1811, elected Senior President of the Royal Medical Society.

Taking his degree, in June, 1812, Marshall Hall paid a visit to Nottinghamshire, and then returned to Edinburgh to fill, for two years, the office of Clinical Clerk, or Resident House Physician, to the Royal Infirmary at Edinburgh. Quitting his Alma Mater, in 1814, he accompanied a gentleman to Paris, and then proceeded alone, and on foot, to Göttingen,—the trip being made at a time and under circumstances calculated to print it deeply on his memory.—

"He made the journey from Paris to Göttingen alone, and on foot, a distance of 600 miles, during the month of November, 1814. The tract of country which he thus traversed had very recently been the seat of war, and presented many perils to the lonely pedestrian. As the shades of evening approached, he frequently pursued his way along the forest-road with a cocked pistol in his hand, for fear of wolves. Once he missed his way, and in endeavouring to recover it, was benighted, and took refuge in a lonely cottage—not, however, to sleep; for all around were seen rusty implements of war, which had been gathered in the track of the armies—that of Napoleon flying towards Paris, and that of the Allies closely pressing upon his rear. His host was a maker of sabots, and he was heard moving about through the night. The pistol was again in readiness. As morning dawned, a few francs were laid on the table, the door gently opened, and the free air and the track across the plain recovered. The route now led through Verdun—too well known to some of our heroes in misfortune—Metz, Mayence, and Giessen. At Göttingen he made the acquaintance of the venerable Blumenbach."

Returning to England, in 1815, the young Doctor settled at Bridgewater. When Arbuthnot, in early life, sought patients in Dorchester, he found that town so healthy, and so well supplied with medical practitioners, that he could not pick up a fee. "Where are you off to?" asked a friend who met him riding in the direction of London. "To leave your confounded place," was the answer, "for a man can neither live nor die there!" Marshall Hall had much the same charge to bring against Bridgewater; and, after six months' trial, he left it, and in the February of 1817 fixed himself at Nottingham, where he speedily obtained a lucrative practice amongst the wealthier families of the neighbourhood. In that town, where one of his sisters had become the wife of a surgeon, he remained till the August of 1826, busy with the duties of his practice, and the composition of many valuable contributions to medical and scientific literature. As at Edinburgh and Bridgewater, he never permitted himself to be seduced into society, his very intimate friend,

the Vicar of St. Mary's, Nottingham, never having the pleasure of entertaining him at dinner during the whole time of his residence in the town. Some of the glimpses given of his laborious life at this period afford a striking contrast to the comparative ease of a metropolitan physician's career.—

"I never knew him to accept an invitation of pleasure; I believe he never dined from home; at least I know that near to him and intimate with him as I was, I never could persuade him to dine with me; in fact, I think he never dined at all, but like the celebrated Dr. Glynn, of King's College, Cambridge (whom I had often seen in my boyhood), he only ate at such times as hunger or thirst compelled him to resort to a corner table for a morsel of whatever he might find there constantly provided for him. At the commencement of his practice he kept one or two riding horses, afterwards three or four, as that practice increased, riding them on all occasions, however near or distant his patients might be, the distances often being very great. This mode of conveyance did not long continue; the exertion and exercise proved too fatiguing, and he had recourse to a gig, and a servant to drive it; by which means he was not only less worn and harassed, but was enabled to read as he travelled. In my daily constitutional walks I frequently met him, when a short conversation uniformly ensued, mostly relative to the subject of his contemplations. I observed that he was never without a Bible at his side, together with divers medical periodicals."

Some, perhaps, would prefer that he had kept his Bible occasionally in his coat-pocket, or under the cushion of his gig, and out of sight, when he was not using it. It would, however, be wrong to suppose that Marshall Hall was capable of hypocrisy of any kind. There was in him no touch of cant. Active and manly, he was a true and simple man, with no false shame of his opinions, nor fear of misconstruction being put on his conduct. He carried his Bible about the country because he enjoyed reading it at odd moments; but his pious temper did not make him a whit the less a bold rider. "How is it that your horses never fall?" a friend asked him. "I never give them time to fall," was the reply.

The year that saw him settle at Nottingham, saw also the publication of his work on 'Diagnosis,' the merit of which was immediately and cordially acknowledged by Matthew Baillie in a letter to the young author:—

"Dr. Marshall Hall, being in London some months after the publication of the 'Diagnosis,' called upon Dr. Baillie, who received him very kindly and said, 'I hope your father is well; I, for one, am much indebted to him for his extraordinary work on 'Diagnosis.' When Dr. Hall modestly told him that he, not his father, was the author of the work, Dr. Baillie exclaimed, 'Impossible! it would have done credit to the greyest headed philosopher in our profession.' He then invited Dr. Hall to breakfast with him."

Successful in practice as Dr. Hall was in Nottingham, he pined to try his strength in town. He was still a young man ambitious for distinction, and he felt confidence that in London he should achieve a first position in his profession. In the August of 1826 he, therefore, visited London, and never returned to practise in the provincial town. His brother-in-law records:—

"The Doctor left Nottingham for London without saying a word to any one. When he had been there above a week, Mr. Oldknow, with a serious face, made inquiry about his return on account of his duties at the General Hospital. I wrote to him, and he answered my letter by saying that he should not return to Nottingham; that I must sell his furniture, horses, gig, &c., and pay all his bills, which I found were very few. So little did he regard pounds, shillings and pence, that he left a number of guineas loose and unlocked in a

dressing-room drawer. Everything indeed was left as if he had only gone out on his usual daily round to visit his patients. Some time before this he had placed in my hands a mortgage-deed of 600*l*. On opening it, I found that it was drawn up in my name. I told him he could not claim a penny off it. 'Never mind,' was his reply; 'pay me the money when I want it.' In process of time he sent for portions of it. When I had paid him the whole sum, I asked for a receipt in full, and he wrote at the bottom of the account: 'Received all this—MARSHALL HALL.'

Settling in No. 15, Keppel Street, Russell Square, Marshall Hall was at once in practice. The county families of his old connexion adhered to him, and the first season after his migration brought him plenty to do, inasmuch that his receipts during his first year's London residence amounted to 800*l*. His professional brethren soon felt his influence in the discussion roused by his paper 'On the due Administration of Blood-letting,' which was read in 1828 at the Royal Medico-Chirurgical Society, and was published two years afterwards as a separate volume. To this work is due, in no small measure, the rapid revolution in medical practice that put an end to that excessive use of blood-letting which, a generation since, destroyed its victims by the thousand, but is now little more than a tradition preserved in the title of a medical journal, which was established when the pernicious system was at its height of popularity.

The position taken by the Doctor on his first coming to town steadily improved, the 800*l*. per annum of 1827 becoming 2,900*l*. in 1833, and advancing with comparatively little fluctuation to 4,000*l*. per annum. To some this income may appear small. But it must be remembered that Marshall Hall was very careless about fees, and, instead of using every opportunity to increase his income, persisted in indulging himself with an annual trip on the Continent, extending over several weeks.

The portion of Mrs. Hall's Memoirs open to the gravest objection is that in which she relates the tardy acceptance by the scientific world of her husband's discoveries. That the Doctor had solid grounds for complaint, and that he met with vexatious opposition, cannot be denied; but antagonism is what the promulgator of new views must expect to find. Indeed, there would be good reason for regret if the reverse were the case. If men were ready to surrender old opinions and admit new ones on the first advances of the reformer, they would be justly censurable for frivolity. The proselyte gained without discussion is not worth the trouble of winning. But in discussion the reformer is often quite as ready to find in his opponents personal enemies and interested persecutors, as they are quick to designate him a pretender. If in many cases they are too indolent to inquire, and are pleased to clothe their indolence in an assumption of disdain, so also in many cases he is apt to forget what is due to the feelings of men called upon to discard the doctrine on which they have for years relied, and to hold useless the learning they have with difficulty acquired. Thus it was with Marshall Hall and those who differed from him. In 1833, he read to the Royal Society his first paper 'On the Reflex Function of the Medulla Oblongata and Medulla Spinalis,' which was printed in the *Philosophical Transactions* of the year. In 1837, his second paper on the same subject, entitled 'On the True Spinal Marrow and the Excito-Motor System of Nerves,' was refused a place in the records of British Science; in short, it was rejected by the Council of the Royal Society. It is needless at this date to revive all the painful story of the battle of the Diastatic

System, in which the scientific error was all on one side, whilst the other was by no means free from mistakes of taste and feeling. Marshall Hall met only with the same obstacles that all teachers meet, be they historians, critics, moralists, or economists, who aim at changing the intellectual condition of men of earnest natures and decided convictions. A nation of shallow and fickle sceptics would afford their new teachers little trouble, and would, without a struggle, embrace their new doctrines and hold to them—till other novelties crossed their path. But in the raw material of a race capable of producing new discoverers is a self-reliance which unfits them to play the part of children. Doubtless Dr. Hall would have preferred having all the members of the Royal Society and all the magnates of his own profession murmur assent to his statements on their first enunciation. But, considering how humanity and society are constituted, we have no hesitation in saying that it would have been alike ill for them, and him, and all concerned in the discussion, if they had done so. The mistake was not that the two sides fought, but that their fight was not an amicable one. And what, apart from the discourtesy and acrimony of certain individuals whom he was by no means slow to provoke, had Marshall Hall to be so indignant at? Abroad, his inquiries and conclusions were accepted with enthusiasm; by the intelligent members of his own profession scattered over the English provinces he was held in high esteem, and was steadily consulted; and in London several of the most distinguished hospital teachers and the leading medical journal from first to last cordially defended his doctrines from the attacks of unbelievers. Surely an originator thus treated had some reason for satisfaction. But, unfortunately, Marshall Hall was obstinate in regarding opposition as hostility, and criticism as detraction. The close of the contest, when his name was placed on the Council of the Royal Society, and he would have looked in vain to find a contemptuous adversary, points the moral of all the preceding exaggeration. To what purpose then does Mrs. Marshall Hall attribute dishonourable motives to those who were in many instances quite as conscientious in declining to accept her husband's conclusions, as he was honest in attempting to convert them? The lady compares the "persecution" of the Doctor to that which Harvey and Jenner endured at the hands of their professional brethren. There is ground for the comparison; no occasion for the word "persecution." There was no "persecution" in the case of either of the three men. Harvey had many opponents who differed from him, and frankly told him so. It is usually said that he suffered in his practice in consequence of the discovery. To make out such a case would be difficult; for when it has been established that his income was materially and permanently less after his discovery than before it, it remains to be shown that the diminution was attributable to no other cause. But Harvey lived to see his views adopted, and to be invited to the Presidency of the College of Physicians. Those who make so much noise about the "persecution" of Harvey seem to forget this. The "persecution" of Jenner is even more imaginary. Where is there any evidence of his suffering "persecution" at the hands of his profession? There was abundance of discussion, and it is to be trusted that the day is far distant when any such novel proposition as that of Jenner's for general vaccination will be adopted without discussion, general and long continued. Many persons, scholars as well as village dames, who took part in the discussion lost their tempers. Men like Dr. Wood-

ville and Dr. Moseley in the ardour of contention forgot the dignity of Science, but the result of the agitation showed how little they represented the higher qualities of their fraternity. The "persecuted" Jenner achieved in his profession both honour and popularity, and his portrait may be seen in Medley's picture of 'The Founders of the Medical Society of London,' in company with the likenesses of many of those distinguished brethren who are supposed to have "persecuted" him.

Over-sensitive and irritable as Marshall Hall proved himself in his bearing to public dissentients, he was in his domestic circle a most amiable man. His relations to his wife and only son were transcendently beautiful; and we have only to regret that they are not brought as much into the foreground as they would have been had any one not intimately connected with them written the biography. "On the 11th of November, 1829, our marriage took place, and in the following September we removed to 14, Manchester Square, where for twenty years we continued to reside; then quitting it for 38, Grosvenor Street." Thus far speaks Mrs. Marshall Hall; but she nowhere tells us who she was before marriage, or where and how she formed the Doctor's acquaintance. On some points, however, she is communicative enough. Here is a picture of confidence on a most delicate subject:—

"I studied to relieve him as much as possible from the small concerns of life, in order to leave him free for the exercise of his great mind. To me he delegated all money-matters, payments, &c., saying—'It is enough for me to gain the money; I cannot undertake the trouble of spending it.' Such was his generous and unbounded confidence in me, that all he possessed was made our joint property, and a striking instance of his confiding nature is afforded by the circumstance that he never once wished to look at my accounts, or asked me any questions relative to them, further than saying, 'I hope you do not owe a bill.' He had a horror of incurring debts, and could not endure to owe anything. Generous to the poor, simple in his requirements, frugal in his own personal expenses, and detesting all ostentation, he had no love of money. So little indeed did pecuniary matters occupy his mind, that he frequently forgot the amount of our property, and asked me, 'How much have we? Write it in my memorandum-book.' He never would enter into any speculation. In the early part of our married life, from a desire to assist others, we lost large sums, our confidence being abused by unprincipled persons. We were also misled as to investments; this had the effect of making us thenceforth constant to the English funds, 'The amiable Three per Cent,' as Sydney Smith called them."

Sixteen years after his marriage we find him writing in the following strain of exquisite tenderness to his wife, then residing with her son on the Continent:—

"Although very difficult for him at that season of the year to leave his large practice, he determined to come to us, and had actually set out, when at Dover he was attacked with severe illness, and so detained; and then better accounts of my health re-assured him. On the 27th of March he wrote:—'Dearest Charlotte, if thou wert called away, I feel that I should die the most painful death—that of a broken heart. Well, then, may I implore thee take care of thy health.' The same idea is repeated in many letters:—'I may well wish thee to be careful, for my prayer, my special prayer to my God is, to take me when He taketh thee, and not to leave me to linger out a miserable existence—or rather death. Yes, my God, my God, take me, take me when Thou takest her who is the sole joy and consolation of my heart! and until that day of Thy appointment, keep us both in Thy perfect peace and joy in Christ. Amen.' In another letter he says:—'Thou knowest my prayer which I pray always—to be taken with thee

when thy day of glory shall come.' The number and length of his letters were extraordinary. On arriving at Rome I found a vast collection of them awaiting me at Torlonia's bank. In one of these he says:—'Dost thou wonder at my much writing? I will tell thee my secret. I never taste food but my paper is before me. I never go to bed, but my pen, ink, and paper are with me, and I write if I awake, which I always do, in the night. I am a man of one feeling—love; love to thee and the boy. I want nothing in this world but thee and the dear boy—and you happy. Heavenly Father, grant me, grant me this! Gold and honour have no charms for me, but you two only! And now, peace, and comfort, and joy in Christ, in the fulness of His blood and righteousness, and of His sure promises, be with thee. Our heavenly Father will re-unite us in due time. May He give us patience to wait; and may He bless us in our dear boy and in ourselves.' When the return was fixed, among the many pages of joy which his heart poured forth, was the following:—'Be thou happy on thy long, long journey, thinking of my love, of my joy and gladness when I shall see thee! Already these thoughts are making me well. I feel it in every thing. Thy return is to me as that of the morning sun to those who have watched through the dark and dreary night—or, rather, the dark and dreary season of an Arctic winter!! Winter indeed has thy absence been to me, dearest Charlotte! dark and cold."

Temperate and careful with his constitution though he was, hard work told severely on Marshall Hall. It is true that few men in his profession taxed themselves more severely than he taxed his powers in attending to the calls of many patients, in continuing his scientific investigations, and in lecturing at the medical schools which had successively the benefit of his instruction. Relinquishing practice at the close of 1853, Marshall Hall occupied himself till his death, at Brighton, on the 11th of August, 1857, in study and scientific correspondence, travelling in America and on the Continent, and visiting such spots of his native land as the variations of the painful malady, from which he eventually expired, rendered it advisable for him to frequent. Amongst the latest of his numerous literary productions were his 'Two-fold Slavery of the United States,' and his 'Rules' (known as the "Ready Method") for the recovery of persons apparently drowned.

Wild Flowers worth Notice: being a Selection from the British Flora of some of our Native Plants which are most attractive from their Beauty, Uses, or Associations. By Mrs. Lankester. Fully Illustrated by J. E. Sowerby. (Hardwicke.)

Mrs. Lankester and Mr. Sowerby have, in this little book, furnished their readers with clear descriptions and coloured illustrations of ninety-six representative wild flowers. The critic when engaged in the task of perusing it has, although it contains nothing very new, found himself carried back to the summers of old:—

When the earth teemed around him with fairy delight,
And when daisies and buttercups gladdened his sight.

The plants selected are representatives of families, and are remarkable for their appearance or their properties; the botanical descriptions are good and popular; the traditions, legends, and poetical associations are briefly told; and, with the aid of the plate, the least acute of observers can scarcely fail to recognize every one of the plants. Wordsworth says:—

And he is happiest who has power
To gather wisdom from a flower.

"How may I learn to name the wild flowers which I may gather during my country rambles?"—and "how may I recognize the plants when I see them of which the poets have sung so sweetly?"—are questions often asked of

botanists, and many books have been written to answer them. If we inquire how the knowledge of plants has been acquired and transmitted, we shall find that it was not by books. The first forms assumed by this kind of knowledge were those of tradition and legend. Country children still learn some little knowledge of a few plants from tradition. Botany, like many other kinds of knowledge, has descended from sire to son, or from the old to the young, in particular families. Toussaint l'Ouverture owed his first ascendancy over the people of his own race, in St. Domingo, to an hereditary knowledge of the uses of herbs. When the kings of France encouraged the study of botany (to obtain designs or patterns for the embroidery upon their garments), the first instructors appointed to teach in the Garden of Plants, at Paris, were not called Professors, but Demonstrators. It was the business of the demonstrator as early as six o'clock every morning, accompanied by the chief gardener, to show the plants to the pupils and tell them their names, peculiarities, and differences. Rousseau, in his charming Botanical Letters to a Lady, tried to do by language what could only be done effectually by seeing and handling the things themselves. In truth, books alone will never do; and it is a very curious fact, that there are botanists who know plants in herbariums, and who have their heads full of what books have said about them, who do not know the plants themselves when they see them in the fields and woods. Almost every writer of a botanical book, for beginners or amateurs, hits the class just above the class at which he aims. The elementary book is useful to the student who is desirous of remembering the elements, whilst far too difficult for the mere beginner. But Mrs. Lankester mentions an extraordinary instance of successful teaching. The late Rev. Prof. Henslow, she says, succeeded so well in teaching the girls in the parish schools of the village of Hitcham, Suffolk, that there are now but few girls in the village unacquainted with our native plants. This instruction must, of course, in the first instance, have been communicated by showing the plants themselves and describing the well-known localities in which they are found. In a little pamphlet prepared in spite of the severe illness which carried him off, entitled 'Illustrations to be employed in Practical Lessons in Botany,' the Rev. Professor describes the method he pursued, and his "unmistakeable guides," it appears, were "little woodcuts."

We have in these little woodcuts, we suspect the secret of the success of the teacher, joined to the fact that he was probably quite as much of a Demonstrator as of a Professor. He taught the knowledge of the plants of the locality from the plants themselves and from pictures of them. In this way the thing can be done, and not by mere words; for the difficulties and obstacles are very serious. None but practised eyes can distinguish the more minute differences between plants of similar appearance: and the names both popular and learned are involved in a confusion truly Babylonish. There are certain plants, for example, involved in the ethnological history of the nations composing the three kingdoms; and there are endless discussions respecting the identification of them. Every Scotchman fancies he knows the blue-bell of Scotland, and can quote Sir Walter Scott's authority upon the question whether it is a campanula or a hyacinth. Yet botanists have not decided whether it is *Campanula rotundifolia*, or *Hyacinthus non-scriptus*, or whether this last is a hyacinth or a squill. This plant is certainly not the flower of

Grecian fable, which sprang from the blood of the beautiful boy named Hyacinthus, who was unfortunately slain by Apollo. The blue-bell of the Scottish people is the wild hyacinth, the squill called *Scilla nutans*, and they carefully distinguish it from the little blue harebell, or *Campanula rotundifolia*. The authority of Sir Walter Scott, moreover, when rightly understood, is in accordance with the botany of the people; for he marks a distinction between blue-bells and harebells. In 'The Lay of the Last Minstrel,' he says,

But still,
When Summer smiled on sweet Bowhill,
And July's eve, with balmy breath,
Waved the blue-bells on Newark's heath.

The allusion here is to a flower large enough to form a feature in a landscape when the breath of July is sweeping across the heath. The blue-bell of the Lady of the Lake, which springs up after being pressed down by her step, and which the mountain maiden chooses as her emblem, is the harebell,—

For me she stooped, and looking round,
Plucked a blue harebell from the ground;
This little flower that loves the lea
May well my simple emblem be.

No doubt their gentle waving is a characteristic of the harebells, but the waving of the blue-bells on Newark heath was a feature of the scene. The *Campanula rotundifolia* is called the harebell because it grows where the hares live, waving to the gentlest breezes whilst the hares are playing in the summer moonlight. If these lovely tiny bells give forth music, as the poets assert on the testimony of the fairies, the silver music may explain the gambols of the hares. Be these things as they may, and whether or no the blue-bells ever

Rang their wildering chimes to vagrant butterflies,
we can well believe that a little child with her lap full of blue-bells, and also white bells, was once overheard praying, "Dear God! do make some pink bells too!"

Heath and heather are often confounded. The flowers of the heath form little rose-coloured clusters at the end of the stalks, while the smaller and more purple blossoms of the heather are placed along the stems. In certain wild and peaty districts, the heather, generally such a lowly shrub, is found growing to a considerable height.

Heather black that waved so high,
It held the cope in rivalry.

The Babylonish confusion of the names of plants often mars the harmony and enjoyment of country rambles and excursions. Ordinary rambles with pretensions to nothing better than folk-lore, and book-blinded savans who never say "I don't know," are equally sure to be overheard disputing respecting the names of the flowers they find. No doubt the popular names are better than the learned in so far as they have not been made to suit classifications, but to portray the objects. The buttercup looks like a tiny cup made of butter, or like buttons made of gold, *boutons d'or*; monk's-hood is indeed like the hood of a monk, and it was by a stroke of genius that the "wee, crimson-tippet flower" was called the day's-eye or daisy. But popular names, although pleasantly descriptive, are not sufficiently distinctive.

Thomas Moore fancies Love, Valour, and Wit, wandering through Ireland, and disputing the right to the shamrock:—

Oh! the shamrock, the green, immortal shamrock!
Chosen leaf
Of bard and chief,
Old Erin's native shamrock!

And certainly the poet is in accordance with the fact when he supposes the discovery of the flower to be the occasion of a little polemical affair. In his poem, Wit settles the question by crying—

Oh! do not sever
A type that blends;
Three godlike friends;
Love, Valour, Wit for ever:

—but the polemical questions of the botanists are not so easily settled; for here we have a lady ruling, with feminine authority, that the shamrock is a member of the geranium family:—

"The wood sorrel (*Oxalis acetosella*), [says Mrs. Lankester,] is easily recognized by its three delicately-green leaflets with longish stalks, marked with a darkish crescent in the centre, veined, and its lovely white flowers which at first sight resemble the wood anemone. There are few walks or shady woods where, in the early spring, the bright half-folded green leaves of this pretty little plant may not be found. The tiny white flowers with their delicate purple veins are called by the Welsh 'fairy bells,' and are believed to ring the merry peals which call the elves to 'moonlight dancing and revelry.' Among the Druids its triple leaflets were regarded as a mysterious symbol of a Trinity, the full meaning of which was involved in darkness. So, too, St. Patrick chose this leaf as his symbol to illustrate the doctrine he sought to teach, and converted many by the apt use of an illustration derived from a plant already sacred in the eyes of his hearers. The original shamrock was undoubtedly the *Oxalis*, though the name became applied to all sorts of trefoiled plants."

When an opinion is enforced by the adverb "undoubtedly," considerable doubt is suggested to minds observant of the occasions upon which it is employed. Conviction is apt in these cases to conduct itself somewhat like the wood sorrel, or, since a lady has decided it so, the shamrock itself, which when the stem is rudely or repeatedly struck, shows itself to be the nearest of all our native plants to a sensitive plant, closing its petals and folding its bright green leaves. The truth, we suspect, may have been that any three-leaved plant may be called the shamrock, the wood sorrel no more undoubtedly than the Dutch clover, all leaves of this kind having been beheld with superstitious veneration, as possessing—

The holy trefoll's charm.

Our native plants are interwoven with our national as well as with our individual life. *Isatis tinctoria*, or dyer's woad, was, says Mrs. Lankester, "undoubtedly" the plant which yielded the blue dye with which the ancient Britons stained their skins. Garth, the poet, is quoted as an authority respecting the manners of the Upper Ten Thousand or Quality among our ancestors, and he says—

British nymphs were known
To love no foreign fashions like their own,
When dress was monstrous and fig-leaves the mode,
And quality put on no paint but woad.

Garth, we fear, was not well acquainted with the history of botanical acclimation, or else he would have known that the fig is a foreigner,—difficult to cultivate in this climate. The Quality have long since changed the fashion, but British soldiers and sailors do still mark themselves blue with woad. A true Briton and a true blue, the students of words tell us, are synonymous phrases; and for this reason, notwithstanding the "undoubtedly" of our author, the fact may be accepted, which, as far as we know, never has been doubted, that the *Isatis tinctoria* gave their names to Britain and the Britons. The Saxons were the Sharp-Blades, and the Britons the True Blues, according to the philologists, and however high Britannia may bear her flag, and however Britons may carry—

Pride in their port, defiance in their eye,
they have in their very name the mark of their origin.

We could while away a long summer-day talking of the pleasant things suggested by this little book. Although all intelligent persons cannot become botanists, not to know the

wild flowers of our country is to be ignorant both of our country and ourselves. And this little book will, as a pocket companion during holiday rambles,—the descriptions and plates being both good,—destroy this ignorance in reference to at least a hundred plants. After mastering it, the student will be not a little astounded at his own learning, when he surveys it in the systematic chapter of contents, only we suspect the less he talks about exogens and endogens, thalamifloræ and monochlamydeæ, the more will his hearers like to hear him talk. And if he finds the pedantic names passing through his head as through a sieve, he need not grieve about it, for, reasoning from the past to the future, there is a new crop of systematic names at least every thirty years. Happily, the dear flowers themselves are innocent of their aliases, and the more they may be known the more will they be loved.

Memoirs to illustrate the History of my Time.
By F. Guizot. Translated by J. W. Cole.
Vol. IV. (Bentley.)

FIVE chapters of *Memoirs* carry on the story of M. Guizot's public life from October, 1832, down to the time of his acceptance of the English Embassy in 1840. The events of these eight years include the disruption of the party of Louis-Philippe—attempts on the King's life—the coalition of M. Guizot and Count Molé—and the diplomatic complications caused by the Civil War in Spain and by the rebellious attitude of Mehemet Ali in Egypt.

Like the former volumes of his work, M. Guizot's fourth volume, though it deals with a brilliant and dramatic period in the constitutional history of France, aims at something far higher than passing popularity. It is not very amusing; and, except by a few men of large experience, it will probably not be carried down to the grouse-country or to the seaside. There are no theatrical revelations in it. M. Guizot is sparing of anecdotes, and apparently jealous of *bons-mots*. He travels over the ground already trodden by M. Louis Blanc in his 'History of Ten Years'; but with a gravity and an authority to which the writer of that brilliant, revolutionary and exciting narrative would make no claim. He treats politics as a science, and as the most serious and considerable of all the sciences. Hence, he avoids flash and sparkle, rhetorical exaggeration, and that "touch of caricature" which Lord Macaulay held to be essential to historical vividness. M. Guizot is willing to escape the fame of being effective, when effectiveness can only be attained by a sacrifice of truth.

M. Guizot reviews the state of Europe in 1832, not merely as to the actual facts of the time, but the principles of action. He lays down the bases on which, in his opinion, all external political activity should be regulated, and on which, in the main, his own activity while a member of the French Cabinet was grounded. "The essential and undisputed maxims of public European law are," he says, "few in number. Amongst the principal we may include the following:—1. Peace is the normal condition of nations and governments. War is an exceptional fact, which ought to have a legitimate cause. 2. The different States are entirely independent of each other with regard to their internal affairs; each constitutes and regulates itself according to the most suitable principles and forms. 3. As long as States are at peace, their respective governments are bound to do nothing that may tend to disturb mutually their internal order. 4. No State has a right to interfere in the internal position and government of another State, unless its own

individual security renders such intervention indispensable." These maxims are, of course, often set aside, and they have never been more conspicuously set aside than by the present Emperor in his Italian policy. M. Guizot, who has never been a revolutionary leader, says:—

"We have taken part in immense wars, entered into without legitimate motive, from egotistical and inordinate ambition, or to realize arbitrary and frivolous combinations under an assumption of greatness. We have seen an encroaching propaganda carry to extremes its violence and tyranny under the name of liberty. Great governments have oppressed the independence of small states, to maintain amongst them, as with themselves, the principles and forms of absolute power. Others have laughed at the privileges and existence of established authorities, under the pretext of restoring the rights of nations. Revolutionary conspirators have demanded the principle of non-intervention to cover their plots against the security of states in general."

Yet, it is not to be denied that the Emperor's Italian policy has had the support of nearly all liberal men in England—liberal men the most sedate and philosophical, as well as those who are by nature more inclined to the views recommended by poetical and enthusiastic ideas. In the eyes of many persons this policy has but one fault: it is not sufficiently lawless and revolutionary. If the eldest son of the Church would allow the Piedmontese to march into Rome, and put an end to a dynasty and government five hundred years older than those of England and Austria, he would be thanked and blessed for the act by all that is most wealthy, liberal and intelligent from the Thames to the Tiber. M. Guizot is aware of this fact, and he lifts a voice of prophecy against such delusions:—

"Every state which long and shamelessly violated the essential maxims of public European law, ended by finding itself, government and people, in a deteriorated condition. In the sixteenth century, Charles the Fifth paraded his ambition and power throughout all Europe, without respect for peace, for the independence of states, or for the traditional rights of princes and nations. He attempted, if not actual monarchy, at least supremacy over Europe. He became wearied and disgusted with the labour, and bequeathed to Spain the reign of Philip the Second, who, following up in his turn, without genius as without heart, the same pretensions, left, when dying, his kingdom stripped externally of its noblest provinces, and within enervated and stricken with barrenness. In the seventeenth century, Louis the Fourteenth, abandoning the organized restraint of Henry the Fourth, resumed with increased ostentation the European dream of Charles the Fifth, and arrogantly violated, as well towards nations as sovereigns, the principles of public justice and Christianity. After the most brilliant successes he found himself unable to sustain the burden they imposed on him; with great difficulty he obtained from Europe a peace as humiliating as it was indispensable, and died, leaving France exhausted and almost compelled for more than half a century to confine herself to a foreign policy of the most limited pretensions and most inert character. We have ourselves seen, on even a more extended scale, the same extravagances of human ambition end in similar ruin."

These parallels are scarcely to the point, and it is possible that M. Guizot does not offer them as being to the point. It is the unhappiness of all contemporary French writing that it is read in a double sense. Every word that a politician like M. Guizot, the victim and perhaps the cause of a great revolution, writes, is sure to be strained into a meaning hostile to the present system. It is certain that he takes a pleasure, perhaps a pleasure slightly mixed with malice, in proving to his countrymen how pure and legal was the system of July com-

pared against that of the 2nd of December:—

"It was the fundamental characteristic of the government of 1830 to have adopted the public law of Europe as the rule of its external policy, not alone in words and in official diplomacy, but in fact and in actual conduct. We did not hypocritically maintain and practise any special maxim of that law, which might appear convenient to the new power we were called upon to establish; we loyally accepted and respected its maxims in the aggregate, the most difficult to reconcile, as well as the simplest; those which consecrated the order established between different states, as also those which protected the independence and free internal development of each state in particular. After 1830 we found ourselves at issue with all the questions which had long excited, and still continue to excite, so much clamour in Europe; with questions of nationality, of intervention, of insurrection, of territorial acquisition, and of natural frontiers. In Germany, in Poland, in Italy, in Switzerland, in Spain, in Belgium, these questions were at that time in play, either separately or in conjunction. We solved them all according to the principles of public European law: occasionally we treated these rights with diffidence, at other times we acted on them without hesitation; here we interfered, there we abstained, and in some cases we declared that we should interpose if others did. Everywhere we placed at the service of human and liberal policy the moral influence we were able to exercise. In no instance did we disavow or exceed the limits of international rights."

On these high principles, M. Guizot tries to explain the apparently difficult case of the attack on Algeria and the subsequent conquest of that province. The success of this attempt is not great. The annexation of Algeria to France he explains as a political necessity. Perhaps it was, though Abd-el-Kader has probably never been convinced of that necessity. At all events, this plea of political necessity has been the excuse for conquest and annexation in every age. Bonaparte annexed Holland and the Genoese from the necessity of getting more seamen. We have annexed Oude and the Punjaub because they were necessary to the peace of India. The Italians have a necessity for Rome. "It is our Capital," said Count Cavour; "it is necessary to us." The Russians want to annex Constantinople, for no worse a reason. In short, we do not see that M. Guizot's foreign policy was very superior to that of other statesmen, except in having received a more scientific exposition.

When M. Guizot turns for an instant from the flow of his political narrative to speak of any one of his illustrious contemporaries, he is always interesting, and generally impressive. The following remarks on M. de Lamartine are both. M. Guizot is speaking of a vote on the Address in 1839, in which M. de Lamartine took an energetic part against the coalition:—

"I cannot encounter the name of M. de Lamartine in my reminiscences, or himself in our streets, without an impression of profound melancholy. No man ever received from God more valuable gifts,—gifts of person and position, of intellectual power and social elevation. Neither have favourable circumstances been withheld from him, in addition to those original advantages; every chance, as well as every means of success, have attended his steps. He grappled them with ardour; for a moment he played a lofty part in a lofty drama; he reached the end of the highest ambition, and enjoyed its most consummate glories. Where is he now? I speak not of the reverses of his public career, nor of the trials of his private life. In our days who has not fallen? Who has not experienced the blows of fate, the anguish of the soul, the inflictions of fortune? Labour, disappointment, sacrifice and suffering have held in all times, and will continue to hold, their place and portion in the destiny of man,—with the exalted more than with the humble. What surprises and saddens me is

that M. de Lamartine should be astonished or irritated at this. It is not alone the pain of his position, but the state of his feelings, such as he has revealed them to us, which I cannot contemplate without melancholy. How can a spectator who looks on events from such a height, be so intensely moved by the accidents which affect himself? How can such a sagacious appreciator of other men be possessed of so little self-knowledge? How does he abandon himself to so much bitterness after such extensive enjoyment of the favours of Heaven and of the world? In that richly endowed nature there must be great blanks and a want of controlling harmony, to cause his fall into such internal trouble and its manifestation with so much vehemence. I have seen too little of M. de Lamartine to know and understand him thoroughly: he seemed to me like a beautiful tree covered with flowers, without fruit that ripens or roots that hold; a brilliant meteor without fixed place, and with no assigned course in the general system of the firmament; a great spirit incessantly passing and repassing from the regions of light to those of clouds, and catching at every step a glimpse of truth without being arrested by it; a noble heart, open to all generous sympathies, but still governed by personal prepossessions."

M. Guizot adds a picture of the scene which causes this episode:—

"I am more confirmed in my general impression of this eminent man, as I perceived in his first appearance in the midst of our debates, in his speeches of the 10th and 19th of January, 1839, on the coalition, the features I recognise at present. He attacked the coalition warmly, but without rescuing and almost giving up M. Molé, for he wished to please the opposition as well as the friends of the cabinet. He defended the prerogative of the crown while treating constitutional monarchy as a government of transition, and occasionally suffering his republican tendencies to escape. He paid compliments and made advances alternately to all the parties which divided the Chamber, without classing himself with any one in particular, endeavouring to draw them to himself without giving himself to them; and when in the midst of this flattering description of all the internal factions of the assembly, M. Arago demanded from his place, 'And what of the social party?' 'I am asked what is the social party,' replied M. de Lamartine; 'Gentlemen, it is no longer a party, it is an idea;' casting around his blandishments, so to speak, in all directions, to obtain universal admiration and assent. His language was that of a great but superficial ambitionist, more greedy of incense than of empire, ready to rush with haughty improvidence into the most hazardous attempts, prodigal of all hopes and promises, but offering nothing beyond vague and incoherent perspectives which disappoint the desires they excite. To be effective and truly great, policy demands a more distinct end; a firmer and more simple choice between ideas, designs, and parties. In his attack on the coalition, M. de Lamartine was, on the side of the cabinet, the oratorical ornament of the debate; but he left it, more celebrated than influential, without obtaining the serious confidence even of those to whom he had lent his eloquent support."

When M. Guizot speaks of his own reverses, he is no less interesting than when he recounts the failures and disappointments of others. Thus, on the formation of the Duchâtel cabinet, in May, 1839, from which M. Guizot was excluded, he tells us of the consolation which he found in literary work:—

"An unexpected incident filled up the leisure and revived the animation of suspended politics. The founder, both by the sword and by law, of the Republic of the United States of America,—Washington,—had left, at his death, two hundred volumes in folio, including his entire correspondence, the letters he had received, as well as those he had written, during the course of his public life. The Congress of the United States purchased these precious documents from his heirs, and lodged them in the archives of the nation."

M. Guizot was requested to examine and

prepare from this mass of material such papers as would give his countrymen a just idea of this great founder of the United States. He says:—

"At that time I had not particularly or deeply studied the foundation of the American Republic. I was occupied with constitutional monarchy, and the more I have advanced in the experience of government, the more I feel convinced that it is the only form suited to France; but I have always felt, and still cherish, an ardent sympathy for the great nation which has formed itself in Northern America, and for the great political trial it braved. It is now a mere hackneyed phrase to say that we should lay more stress on the practical results of governments than on their names and forms. I suspect this common-place expression is more frequently repeated than well understood or adopted. In spite of so many unfortunate experiments, the name and form of the Republic maintain in our days a dangerous power, for they still comprise the dream of many ardent and generous spirits,—a dream to which our existing habits and new social position often lend the appearance of a possible and approaching reality. There are, moreover, between some of the principles of constitutional monarchy and those of a republic, affinities which seem to render natural the passage from one to the other, and maintain, for republican hopes and tendencies, a strength which their repeated checks would otherwise seem to have taken from them. A serious investigation of the originating causes and first steps of the great American democracy, has therefore, for us, as much importance as attraction. In no other inquiry on the nature of government can we better learn to penetrate beyond appearances, to estimate the end rather than the outward form, and to recognize what are, in all cases, the true characteristic and imperious conditions of liberty. Besides the event itself, another fact in the foundation of the United States of America powerfully attracted and interested me,—the individual who had directed the movement in war and in peace, Washington;—a great man by compulsion, as we may say, and against his own choice, who found himself equal to all situations and tasks, without seeking or desiring any; who felt no natural or ardent necessity to undertake the great deeds he was capable of and has accomplished; and who might have lived on, a small proprietor, agriculturist, and unambitious hunter, had not necessity and duty transformed him into the general of an army and the founder of a nation. As I more closely studied the event and the man, I became the more attracted and enlightened, as well in the convictions of my public life as in my solitary thoughts. I passed and repassed incessantly from France to America, from America to France. I saw before me two social conditions, profoundly different: the one old and catholic, free in spirit, without public liberty, overflowing with monarchical traditions, aristocratic remembrances and democratic passions, mixed up throughout all history with the affairs of Europe and of the world; the other, new and protestant, trained to republican habits, although faithful to the legal and respectful manners of the mother-country, without rivals or neighbours, isolated in space, careless of the past and boldly confident in the future. These two societies had recently accomplished two revolutions as opposite in character as themselves,—America a revolution of national independence, France a revolution of social re-casting; and to both succeeded the labour of the formation of two governments equally distinct from each other, the one republican and federative, the other monarchical and unitarian, but both inspired by the same wish and tending to the same end,—political liberty. For a man called to take part in this difficult object of the France of 1789, the establishment of the United States in 1776 presented a grand spectacle for contemplation and a productive source of instruction."

The picture sketched by M. Guizot of Washington as a man and a politician, has very fine points:—

"Two features predominate in the character of Washington: a profound attachment to the cause

he had adopted, and a firm independence of judgment and conduct in the service of his country. He was a genuine Anglo-American planter, strongly imbued with English traditions and American manners, sympathizing perfectly with the general sentiment and desire of his fellow-countrymen, but whose mind, imperturbably sound, rejected all public passions, prejudices and caprices, judging them with equal freedom and calmness whenever they presented themselves before him; never quarrelling with them abruptly, but ever resolved to resist when they compromised the policy which, in his strong conviction, the public interest called on him to maintain. While possessing the instinct and natural gift of authority, he was eminently prudent and scrupulous in the exercise of government: full of respect for men in general, and for the common rights of all, but without any democratic bias, and dignified in manner, on all occasions, almost to severity. An admirable compound of lofty intelligence and tempered judgment, as of pride without ambition, which commanded, at the same time respect and confidence, and raised him to the undisputed leadership of a people who saw in him their most disinterested, their safest, ablest and worthiest servant."

More curious still is the opinion formed of Washington by Louis-Philippe. When M. Guizot had completed his 'Study of Washington,' he sent a copy to the King, who thanked him in the following letter:—

"My dear late Minister,—If I have so long delayed my reply, it is because I wished to thank you myself for your work on Washington, and to tell you how much I should be gratified if I could command time to read and talk over it with you. You know too well how completely I am deprived of these tranquil relaxations. Nevertheless, I shall endeavour, at least, to read the Introduction, which I hear spoken of as a masterpiece. My three years' residence in America produced an important influence on my political opinions and judgment on the march of human events. The puritanic and democratic revolution, vanquished in England, and driven for refuge to the little States of Massachusetts, Rhode Island, and Connecticut, overflowed and subdued all the other elements of population in the vast continent on which the European tempest had impelled it. For, although the Dutch at New York, the English Catholics under Lord Baltimore at Baltimore (1632), and, earlier than either, the French (under Henry the Fourth), had attempted this great colonization, all were extinguished under the puritanic democracy, and the fragments of the *Long Parliament* and its army. But Washington was neither puritan nor aristocrat; still less was he a democrat. He was essentially a man of order and government, seeking ever to combine and use to the best advantage the often discordant and always weak elements with which he had to combat, and to rescue his country from anarchy. I feel convinced that you have drawn him thus, and my confidence on this point adds much to my regret at not having time to read your Washington; but it always gives me pleasure to repeat the assurance of my sentiments towards you."

Politicians will find the closing chapter of the volume more exciting than the other four chapters. It deals with the subject of Mehemet Ali, and with the circumstances which led to the Syrian intervention of 1840. M. Guizot still takes a French view of the transactions of that critical time, though he is forced to admit that nearly all France was blind and mad with passion. "I shared in the illusions of the partisans of Mehemet Ali," is an honest confession. Few of M. Guizot's countrymen, if they spoke the truth, would fail to make a similar avowal.

The next volume of the 'Memoirs to illustrate the History of my Time' will contain the history of M. Guizot's mission to England in 1840.

The History of the County and City of Cork.
By the Rev. C. B. Gibson. Vol. II. (Newby & Co.)

Mr. Gibson's second volume is rather kaleidoscopic. His materials are to the purpose, and he keeps within prescribed limits; but what pretty pattern will present itself at the next turn of the glass, it is not easy for a spectator to foretell, so little real connexion have the subjects one with another. Nevertheless, there are well-contrasted colours in the field; and noted actors strut across the stage. Here we have Montjoy, the seducer and husband of the sister of Essex and the repudiated wife of Rich. Anon, we see a group of royalists proclaiming James the First outside the walls of Cork, of whom the "rebel" municipality would allow no such proclamation within: later we see the cedars at Tivoli, near Cork, which are said to have been planted by Raleigh, who set sail from that harbour on his last expedition. Further off, stand bishops and vicars in a lamentable state of ecclesiastical distress, Waterford with 50*l.* a year, and vicars with 16*s.* per annum. Again, we have the Earl of Cork squabbling with Wentworth and Laud touching Lady Cork's monument, which stands at this day as the widower then insisted it should. The dark-haired Lady Norreys, "the crow," crosses the field of view, "her crow's heart as black as her feathers," at the report of her son's demise. Among those succeeding her, we discover Sir John Percival, whose patent of baronetcy contained a singular clause, whereby his son, or grandson should that "son" die before, on attaining the age of twenty-one would become a baronet whether the original baronet were alive or not. Almost as singular a privilege was enjoyed by the Earl of Cork, who, though not an English peer, was, on account of his wisdom and experience, "admitted to sit in the House of Lords, on the woolsack, *ut consiliarius*." He was still more distinguished as being the sire of that Robert Boyle who is known as "the father of chemistry"; and not less honoured in his daughter Lady Mary, Countess of Warwick, whose favourite word for prayer was "heart-ease." A glimpse of one who did not always find it so, for he often "struggled" in prayer, is afforded us in the person of William Penn, whose committal to goal, for preaching the gospel, is merely recorded. Of another Boyle we obtain a glance,—namely, Charles Earl of Orrery, Baron Boyle of Marston in England, from whom "the sphere, or astronomical machine called an *Orrery*, derived its name, although the credit of the invention belongs to Mr. George Graham, a watch-maker in London." The Boyles were certainly more distinguished than the Southwells, of whom Sir Richard "had a licence for keeping forty taverns within the city and liberties of Limerick, to sell wine and aqua-vitæ." Not the least singular of the pictures here represented is that of the death of Henry Fitzroy, Duke of Grafton, son of Charles the Second and the Duchess of Cleveland, fighting on the side of William against his Stuart uncle. He was killed by a shot "fired by a blacksmith, from a forge in Post-Office Lane. The place where he was mortally wounded is called Grafton's Alley to this day." Men with names more renowned have passed away from this locality more ignobly. Of two nephews of the great Irish democrat, whom the Cork historian designates as "the judge, John Philpot Curran," one kept a school in Kanturk, the other was kept in the Kanturk workhouse; "a collection was made a few years ago to send him to America."

Cork produced Barry, the artist. Mr. Gibson states further, with curiously-worded

criticism, that "Cork has produced an equally great, if not greater, living artist in Mr. Daniel Maclise." We do not know how Maclise will like the portrait which Mr. Gibson has given of him, taking likenesses of Sir Walter Scott, "on the sly, when the great novelist was in Cork." The young artist dodged him through the city, got a stroke at him behind the counter of a bookseller's shop, a second on the steps of the Imperial Hotel. The third was a regular "sitting," as he waited in his carriage for Miss Edgeworth, by whom he was accompanied in his tour through the south of Ireland. Perhaps the finest of his pictures, adds Mr. Gibson in a magnificent climax, and with some confusion of possessive pronouns,—for he does not mean Sir Walter's but Maclise's pictures, "for which he received 18,000 guineas,—was the marriage of Strongbow to Eva, the daughter of the King of Leinster." We fancy that no one will be more astounded and amused at this last scrap of monetary intelligence than Mr. Maclise himself.

It is not only the possessive pronouns which obtain but indifferent treatment at Mr. Gibson's hands, the personal are also very roughly handled. Trotter, Fox's secretary, died in the county Cork, in abject poverty. Mr. Gibson, his godson, remarks compassionately, "Would he had known of his distress, which he concealed from his friends and relatives." This surely cannot be correct Irish—even for Cork.

Mr. Gibson's style generally is not "adapted to the meanest capacities." When he says, "I have been pointed to cedars at Tivoli which tradition says were planted by Sir Walter Raleigh's own hand," we hope he was not hurt by being so pointed. Wentworth overreaches Cork, in an arbitration case, and Mr. Gibson's comment is, "the Earl was never so *done* in all his life." Another comment: "For Cromwell to say, 'I meddle with no man's conscience,' and to deny in the same breath, 'a liberty to exercise the mass,' is a piece of audacity, in the shape of self-contradiction, which the devil himself would scarcely venture on." *Scarcely!* How does Mr. Gibson know?

Mr. Carlyle is, for his ignorance touching Cromwell, trounced. Our author calls names with alacrity. Lord Broghill, he says, "was the Irish Titus Oates of his day"; from which we conclude that Mr. Gibson is not acquainted with the entire infamy of the man of whom Sussex is so little proud.

The soldiers of James and William were "sadly down at the heels and out at the toes"; and many of our Cork merchants are, in turn, said to "have been horribly out at the elbows." We have already shown how authoritatively Mr. Gibson speaks of what the devil was scarcely likely to do, on a certain occasion; he speaks with equal authority on a matter not less interesting; "a man has been brought to life by pouring a scalding tumbler of punch down his throat, but never by ale." Mr. Gibson knows. He informs us of a tailor who, after hanging nine minutes, was cut down, when a Cork actor, named Glover, "succeeded by dint of friction and fumigation in restoring the circulation and bringing him to life. He rose, got drunk, and went that night to the theatre to return Glover thanks, to the consternation and horror of the whole audience. He was the third tailor that had outlived hanging during ten years." The author does not state whether scalding punch was used in the other two cases; but he offers good compensatory matter in describing a Cork club of the last century, which was established by tradesmen, "the number of letters in whose Christian names amounted to forty-five. They met at a public-house where they spent forty-

five pence each, and each drank exactly forty-five glasses of punch, which produced forty-five toasts and sentiments, including the glorious memory, and a prayer against despotic rulers." These whisky imbibers would not have thought Sir Boyle Roche a fool, when he proposed in the Irish House of Commons, that "every quart bottle should hold a quart." The public of the present day are sadly defrauded in the matter of measures by men,—some of whom sit on magisterial benches and send petty-larceny rascals to prison, with reflections on the lack of honesty and the want of a moral and religious education. With regard to Cork, there would seem to have existed always in that city more of scalding punch than warmth of religion. The men who drank their five-and-forty glasses nightly were the same who flung John and Charles Wesley into Cork gaol, as "persons of ill fame, vagabonds, and common disturbers of the peace."

It is Mr. Gibson's solemnly-recorded judgment that "our modern historian, Haverty, is both learned and correct." Some months ago, we took some pains to exhibit Mr. Haverty's ignorance and incorrectness; and to point out how, by his blundering and illogical process, he really established a conclusion which he never dreamed of,—namely, that all the heroes of Irish history were the most ill-bred scoundrels that ever figured in a calendar of crime. We are not surprised, however, to find Mr. Gibson describing Mr. Haverty as "learned and correct," for he adopts the manner and method of that accomplished Boettian. Mr. Gibson makes mention of certain native Irish who, in 1642, "executed eight of Lord Cork's English tenants, and bound an Englishwoman's hands behind her, and buried her alive." On this atrocity he has not a word of condemnatory remark; but when Broghill hangs a prisoner, Mr. Gibson groans forth at the deed, "Shame upon you, Broghill!" When the Duke of Berwick burned down Lord Orrery's house, after dining in it, the chronicler of Cork has nothing to say against it. He shows us murderers and robbers enjoying public sympathy, and he does not declare that they had no right to the enjoyment. The name of Wolfe Tone, he says, was one "with which to terrify kings in their cradles," which would have been very unjust to the babies; and of Tone's declaration that he would rather "the devil himself had the country than England," he does not point out either the absurdity or the atrocity. All this is very much in the style and spirit of the learned and correct Mr. Haverty; so, too, is the brief notice of Hogan, the Irish sculptor, who was originally articulated to a Cork attorney. Mr. Gibson says, Hogan died of consumption; but there is not a word in allusion to the fact that the poor fellow was driven into that condition by the conduct of the Irish priests who, remembering the sympathies manifested by the Irish artist in Italy, took especial care that he should starve in Ireland,—and Hogan starved accordingly.

It will be seen that we do not think so well of Mr. Gibson's second volume as we did of his first. The author has been less careful and more desultory. He has, however, collected much material of which future historians may avail themselves, and in this respect his work will not have been achieved in vain.

Women in the East—[*Les Femmes en Orient*, par Madame la Comtesse Dora d'Istria]. 2 vols. (Zurich, Meyer & Zeller; London, Barthes & Lowell.)

Of Woman in the West enough has been written, or almost enough. Not, indeed, if the subject were always wisely treated,—but,

has it not descended into the region of cant, and become simply a bore? To take our own fair countrywomen, for example, what havoc has been made of them, and how have their characters, mental and moral, suffered in the rude dissection to which they have been subjected by writers of the Hannah More stamp, not to mention that of Mrs. Trimmer, or of Mrs. Ellis. Against these, of course, we have to set the long and brilliant array of authors, both male and female, from Chaucer to Shakspeare, from Shakspeare to Pope, Addison and Steele, and from these to Sir Walter Scott, Mrs. Jameson and Miss Brontë; all of whom, either incidentally or of set purpose, have sketched for us our Englishwomen as they really are, or have been, according to the different phases of society in which they lived and wrote. It is because these latter have been so true, and at the same time so artistic, ennobling with the hand of genius the delicate and difficult subject that they touched, that we shrink with a natural horror from the herd of writers that are continually discoursing about woman's rights and woman's mission, and whether woman can regenerate society. Society, as it appears to us, had better not be regenerated than have it done in the way that some of these people propose. Better, upon the whole, remain as we are, and trust to the gentle hand of Time for those further improvements in our social system that are sure to take place in due season, instead of harassing ourselves with every new theory upon the subject, especially as regards the fair sex here at home;—which being agreed, there is nothing meanwhile to hinder us from glancing at the present condition of Women in the East, under the guidance of the lady whose volumes are now before us.

In mentioning the real name of the author of this work we violate no secret, it being now well known that Madame d'Istria is the pseudonyme of the Princess Koltzoff-Massalsky, née Helena Ghika, daughter of the Prince Alexander Ghika, ex-Hospodar of Wallachia. She is therefore a Roumanian by birth, a Russian by marriage, almost a Greek from her education,—having been a favourite pupil of the illustrious Pappadopoulos,—who initiated her, as she tells us, in the glorious language and literature of ancient Hellas,—a liberal in politics, and very nearly a Protestant in religion. If we add, that she has travelled almost all Europe through, and made herself acquainted with the literature, manners and customs of every civilized nation, while all her published works prove her to be a woman of native genius as well as refined feelings, no one will grudge to know something of what she is so well qualified to speak about,—namely, the condition of her sex in Eastern Europe.

Upon opening these volumes, the first thing that interests us is the passionate attachment shown by the author towards the nation that gave her birth. The Roumans, we have been hitherto taught to consider, are not a people calculated to elicit much enthusiastic praise. Descended from a succession of old Roman colonies, principally veterans of the Imperial legions, and amounting at present to nearly ten millions of souls, they inhabit a great part of Transylvania, of Temesvar and the parts adjacent, of the Bukovina, of Wallachia, Moldavia and Bessarabia. They are also to be met with in Bulgaria, Servia and Macedonia. In all these places, notwithstanding the oppressions to which they have been from time to time subjected from Magyars, Turks and Germans, they have nevertheless, according to our author, faithfully preserved their na-

tionality, language, customs and traditions. They are, in fact, the Italians of the East! Neither is woman among the Roumans the degraded creature that some German writers have sought to represent her. On the contrary, she is the companion of her husband, gay and lively in her disposition, but at the same time preserving all the modesty of the ancient Roman matron, while she contrasts favourably in her personal appearance with the dull and heavy German. The contrast is also favourable in the matter of hospitality, the Rouman women being as generous as the German are parsimonious. Rich or poor, they all exert themselves alike to entertain the stranger that comes among them, and that without hope of reward. Industrious, too, as well as gay, they not only assist their husbands in the labours of the field, especially at seed-time and harvest, but they are proficient in the more womanly employments of spinning, sewing, knitting and embroidery. Every maiden among them has an ample *trousseau*, the work of her own hands, in readiness for the auspicious occasion of her entering into the rank of a matron, and having attained to this staid dignity, she and her distaff are inseparable companions. To see the Roumanian women, however, in perfection, whether maidens or wives and mothers, one should go with them into their churches on a Sunday, when the stranger is at a loss which to admire most—their simple unaffected piety, or the gaiety and propriety of their costume. He should then meet them at the *Hora* or dance (the word is pronounced *chora*, showing its Latin origin) which follows, when their gaiety is as conspicuous as a short while before was their devotion. Then do you see all their native graces heightened by the accessories of an embroidered jacket, the *catrinza* or double apron of various colours, and a head-dress set off with gold coins, natural or artificial flowers and peacocks' feathers, the whole terminating in those red boots, which are known in Western Europe only from their occasional introduction on the stage. In their social re-unions among the superior classes, the same national characteristics of costume prevail, the materials only being richer and the taste of course more refined. And in these, quite in proportion to the variety of colours, is the volubility of the tongue. They listen readily to all you have to say, but in return overwhelm you with a torrent of inquiries about the manners and customs of the nation to which you belong, or among whom you may have been sojourning. Such was the case with our author, who thinking she would never have done satisfying their curiosity respecting their sisters at Paris, took refuge in appealing to them to gratify her in turn with some specimens of their national songs. These songs are of various kinds, some commemorating the deeds of departed heroes; others pervaded by a tone of indefinable melancholy, not unnatural in a race whose very existence has been so often perilled by the incursions of its foes; and others again celebrating the charms of the Rouman maidens in strains which if exaggerated are certainly not unpleasing.

But we must not linger over this part of the work. Of the women of Albania, of Bulgaria, Servia, Dalmatia, Montenegro and Turkey, our author has a great deal to communicate; but these also we must neglect for the superior attraction of the women of modern Greece—free and independent Greece, as it happily now is! In the various struggles that took place between the Turks and Greeks, resulting in the achievement by the latter of their long-sought-for independence, purchased by deeds of daring fully worthy of their heroic ancestors, the women of Hellas, earned for

themselves a reputation that must live for ever. Witness the two sieges of Missolonghi, the first in 1821 and the second in 1826. Witness also the massacre of Scio in 1822. Among the victims on this occasion was a maiden named Irene, of exquisite beauty, whom, as she lay fainting among a heap of dead and dying, a negro had sought to rescue by claiming her as his wife. A Turk also beheld her, and, struck by her charms, offered money to the negro in exchange for his prize. This he accepted, but a quarrel afterwards ensued, and the maiden meanwhile recovering her senses, refused to become either the wife of the one or the mistress of the other, beseeching them in preference to lead her to death, that so her soul might return unspotted to its Maker. She is my slave, said the Ottoman. I am the slave of the Crucified One, was her reply. Scarce had she spoken when the brutal negro laid her dead at his feet with a bullet from his pistol rather than relinquish her to his rival. At Hydra, our author met with a lady who happened to be at Corinth when three hundred women were landed there, fugitives from the massacre at Scio. All of them were either widows or orphans, and bore the marks of the rage of their enemies from scimitar slashes on their bosoms and faces, or had their arms in slings from the effects of the Turkish bullets. They did not weep, she said; their despair was too great for tears. But when shown the Christian flag waving over them in friendly protection, they knelt down and devoutly thanked God for having brought them to a place of safety. At the same time they besought Him to deliver their beloved country from the rage of the Moslem.

In many others of the isles of Greece there was the same determined spirit exhibited by the female population. At Spezzia, not far from Hydra, was born the celebrated Bobolina, a woman destined to avenge the injuries which Mussulmans had inflicted upon her sex. Of ten vessels, manned with 600 sailors, furnished by the warlike inhabitants of the ancient Tiparenos, to aid the cause of independence, Bobolina supplied three, of which she herself took the command; with the express determination of exacting a bloody reckoning for the murder of her noble husband, who had been strangled seven years previously by order of the Sultan. At the same time, she sent her two sons to combat amongst the land forces of the Greeks against the common enemy. One of these fell nobly fighting for his country. Bobolina herself performed prodigies of valour, especially at the blockade of Naupli; on which occasion, in reply to some Turkish envoys commissioned to treat with her for a suspension of hostilities, she expressed herself in the following terms:—

I have lost my husband; but the Lord's name be praised! I have lost my eldest son on the battle-field; but the Lord's name be praised! My second son, and the only one that remains to me, is now fighting in the ranks of his countrymen. He is only fourteen years old, and will mayhap also die gloriously. For this, too, shall the Lord's name be praised! And for her who speaks with you, it is, in all probability, reserved also to pour out her blood under the standard of the Cross. For this, likewise, shall the Lord's name be praised! But, rest assured you, that we will either conquer or die; and if it be death, the thought will console us at our last moment, that our beloved country must and will be free!

A worthy rival of the heroine of Spezzia was Modéna Mavroghenis, born in the island of Eubœa, of a princely race. Her father Stephen, like the husband of Bobolina, had been strangled by order of the Padishah; on which occasion Modéna found a refuge in the island of Mycone. When the insurrectionary war

burst forth, this distinguished maiden roused the Myconians, by her influence and eloquence, to send an expedition to the succour of Eubœa, —and declared to its chiefs, Azorbas and Nicokis, that she would give her hand in marriage to whoever inflicted the greatest loss upon her country's enemies. The expedition set sail; and soon only two strong places in the island, namely, Negropont and Carystos, remained in the possession of the Mussulmans. While their vessels were away, an Algerine squadron landed its crews at Mycone, with the cry of "Death to the Giaours," when Modéna met them at the head of a determined band of patriots, and with the utmost bravery drove them back to their ships. "Honour to the brave! Victory to the Cross!" she cried out, as with her clenched hand she struck the head of the decapitated Moslem chief. "Victory to the blood of heroes! Glory to Modéna Mavroghenis, daughter of the martyred Stephen!" shouted the Myconians. This, however, was only the commencement of Modéna's glorious actions, with which both Eubœa and continental Greece afterwards rang; nor did she sheath her sword again until her country was free.

Such was the noble spirit that animated the women of Greece as painted by the sentimental Countess Dora d'Istria!

Of the women of Greece, since it has been constituted a free and independent kingdom, our author has a good account to render. At Athens, the choice of which as capital of the new kingdom, objected to by many on account of its situation, she justifies on various grounds, but chiefly from its ancient renown; the women are in every respect patterns of their sex and worthy the imitation of the rest of their countrywomen. The Queen Consort, however much in England we may disapprove of her politics, maintains a court distinguished by all the decencies and proprieties of society, and the example set by her penetrates to every rank, rendering Athens one of the most virtuous, if not the gayest of capitals. To a stranger the costume is not so pleasing, because not so primitive, varied and picturesque as in other parts of Greece. At the commencement of the War of Independence, the Athenian women of good condition used to wear a white tunic of delicate texture. A mantle of cloth of gold or silk covered their arms and fell with grace over their shoulders; their head-dress being a simple handkerchief of transparent quality negligently thrown over their rich black hair. At present the universal fashion is a skirt, varied in its colour and material according to the taste or position of its wearer, with a velvet jacket open in the front, and a red cap or *fez* for a head-dress; the last mentioned being sometimes worn by the Queen herself, who in general, however, inclines to a more occidental costume. In the best Athenian society, nevertheless, the *fez* may be considered as dying out. This is not the case at Patras, where the *fez* is still in full vogue, although the tunic is often replaced by the skirt; nor at Megara, where both tunic and head-dress are still preserved. In the islands, many of which are still under the Ottoman rule, although they combated bravely for their liberty, there is a still greater variety of costume. At Tinos and at Syra, two of the ancient Cyclades, the women braid their long black tresses into a sort of turban, intertwined with a handkerchief of bright red or some other striking colour. Their grace and elegance are surpassed only by their beauty. It is pleasing also to learn, that under Turkish rule several of these islands are prosperous. At Syra, especially, the traveller sees everywhere the marks of thriving industry. A new

and elegant capital blossoms round the gulf, while the old city climbs the rocks close to where stood the ancient Hermopolis. The houses in the new town are solidly built and have a cheerful aspect, being all whitewashed on the outside, with terraces of flowers running along the roofs. The women are as industrious as the men. One of their tasks is to supply the respective households with water, and it is a pleasant sight to behold them engaged in this occupation, as, with *amphora* on shoulder, braided hair and naked feet, they trip along through the passes of the rocks, lightly as Diana's nymphs and not excelled by them in beauty. While in these islands the women enjoy considerable liberty, at Hydra and Spezzia, on the contrary, the lords of the creation are unreasonably jealous and exacting, condemning their wives and daughters to a life of strict retirement; a custom which prevails also in Crete, Cyprus and Rhodes. Education in these three islands just named is at a very low ebb, both as regards the male and female population. Of boys' schools there are but few, and those miserably conducted, while of girls' schools there would appear to be none at all. Much of this neglect is of course to be attributed to the destitute condition of the inhabitants, who with a few exceptions are poor. What a contrast do we see when our author carries us to Smyrna! Smyrna, she tells us, is the city of the East, in which the greatest care is bestowed upon the nurture and education of the fair sex. Greeks, Armenians, Jews and Franks, vie with each other in training them gently for the duties and enjoyments of life. So much has been written, however, of the Smyrniote women, their charms and accomplishments, by numerous travellers, that we need not enlarge upon them here.

Horæ Subsecivæ. By John Brown, M.D. A Second Series. (Edinburgh, Edmonston & Douglas.)

HERE is a writer, who, past all doubt, has something of the Narcissus spirit, and enjoys his own conceits to no common degree.—His collection of scattered papers, some not worthy of being collected, is heralded by three mottoes, on three separate pages; it is dedicated to four different friends. The Preface starts off with a caper, in which *Uriah Heep* and Robert Hall figure, "hands across"; and the pages that follow are freaked by whimsies which are not whimsical,—by quotations which show learning rather than the application thereof,—by anecdotes little worth recounting—witness the puerilities about dogs, (a weak copy of Southey's "Cat's Eden," in 'The Doctor')—and the criticisms on Art, which will hardly be remembered an instant after they are read. The quantity of what may be called literature of the lazy is a phenomenon, strange in these crowded and rapid times of ours. Surely in so much as intellectual exercise is good, dawdling over speculation is a waste of time;—and what are so heavy as humours that fail to hit?

Three of these "Hours," however, deserve exemption from the above censures. Here is something which will be new to most English travellers in Scotland:—

"If any one wants a pleasure that is sure to please, one over which he needn't growl the sardonic beastitude of the great Dean, let him, when the Mercury is at 'Fair,' take the nine A.M. train to the North and a return ticket for Callander, and when he arrives at Stirling, let him ask the most obliging and knowing of station-masters to telegraph to 'the Dreadnought' for a carriage to be in waiting. When passing Dunblane Cathedral, let him resolve to write to the *Scotman*, advising the removal of a couple of shabby trees which

obstruct the view of that beautiful triple end window which Mr. Ruskin and everybody else admires, and by the time he has written this letter in his mind, and turned the sentences to it, he will find himself at Callander and the carriage all ready. Giving the order for the *Port of Monteith*, he will rattle through this hard-featured, and to our eye comfortless village, lying ugly amid so much grandeur and beauty, and let him stop on the crown of the bridge, and fill his eyes with the perfection of the view up the Pass of Leny—the Teith lying diffuse and asleep, as if its heart were in the Highlands and it were loth to go, the noble Ben Ledi imaged in its broad stream. Then let him make his way across a bit of pleasant moorland—flushed with maiden-hair and white with cotton grass, and fragrant with the *Orchis conopsea*, well deserving its epithet *odoratissima*. He will see from the turn of the hillside the Blair of Drummond waving with corn and shadowed with rich woods, where eighty years ago there was a black peat-moss; and far off, on the horizon, Damyat and the Touch Fells; and at his side the little loch of Ruskie, in which he may see five Highland cattle, three tawny brown and two brindled, standing in the still water—themselves as still, all except their switching tails and winking ears—the perfect images of quiet enjoyment. By this time he will have come in sight of the Lake of Monteith, set in its woods, with its magical shadows and soft gleams. There is a loveliness, a gentleness and peace about it more like 'lone St. Mary's Lake,' or Derwent Water, than of any of its sister lochs. It is lovely rather than beautiful, and is a sort of gentle prelude, in the minor key, to the coming glories and intenser charms of Loch Ard and the true Highlands beyond. You are now at the Port, and have passed the secluded and cheerful manse, and the parish kirk with its graves, close to the lake, and the proud aisle of the Grahams of Gartmore washed by its waves. Across the road is the modest little inn, a Fisher's Tryst. On the unruffled water lie several islets, plump with rich foliage, brooding like great birds of calm. You somehow think of them as on, not in the lake, or like clouds lying in a nether sky—'like ships waiting for the wind.' You get a coble, and a yauld old Celt, its master, and are rowed across to *Inchmahome, the Isle of Rest*. Here you find on landing huge Spanish chestnuts, one lying dead, others standing stark and peeled, like gigantic antlers, and others flourishing in their *viridis senectus*, and in a thicket of wood you see the remains of a monastery of great beauty, the design and workmanship exquisite. You wander through the ruins, overgrown with ferns and Spanish filberts, and old fruit-trees, and at the corner of the old monkish garden you come upon one of the strangest and most touching sights you ever saw—an oval space of about 18 feet by 12, with the remains of a double row of boxwood all round, the plants of box being about fourteen feet high, and eight or nine inches in diameter, healthy, but plainly of great age. What is this? it is called in the guide-books Queen Mary's Bower; but besides its being plainly not in the least a bower, what could the little Queen, then five years old, and 'fancy free,' do with a bower? It is plainly, as was, we believe, first suggested by our keen-sighted and diagnostic Professor of Clinical Surgery, the *Child-Queen's Garden*, with her little walk, and its rows of boxwood, left to themselves for three hundred years. Yes, without doubt, 'here is that first garden of her simpleness.' Fancy the little, lovely royal child, with her four Marys, her playfellows, her child maids of honour, with their little hands and feet, and their innocent and happy eyes, pattering about that garden all that time ago, laughing, and running, and gardening as only children do and can. As is well known, Mary was placed by her mother in this Isle of Rest before sailing from the Clyde for France. There is something 'that tirls the heartstrings a' to the life' in standing and looking on this unmistakable living relic of that strange and pathetic old time."

Is there another woman in history, who has left so many "stations" for fancy to dream at as Mary Queen of Scots? Whatever be the

evil gifts that spiteful Fairies may have endowed her with, that of fascination was dropped into her cradle, by some more relenting spirit, in lavish quantity. Whether it be by the wayside well, near Lancaster, at which she is said to have rested,—or the prison-room of some Derbyshire palace, or the murder-chamber in Holyrood, or the chill island of Lochleven, lovers of romance and cherishers of association are constrained to pause in every place

Where the fairy foot hath been.

Dr. Brown's Memorials of his Father, written in an unaffected spirit of filial reverence and remembrance, must be noticed because of their sincerity and real portraiture, doubly precious in a book so "sicklied o'er" with coxcombry. The third redeeming chapter is the one entitled "Mystifications," which tells us, how a sprightly and quaint Scotch Lady, Miss Stirling Graham, by dressing up, and going out into Edinburgh society as some imaginary *Leddy Grippy*, completely took in by her personations the wits and the "Edinburgh critics," Jeffrey among the number. She wrote her recollections of the success of her masquerading, and published them privately. The book is quoted from, and seems racy and droll; a book to testify to the invention and cleverness of the British and North British gentlewoman, from the northern side of the Empire, even as the drawings, etchings and social verses of Miss Katharine Fanshawe do from the southern one.—Miss Graham diverted herself, kept Edinburgh society alive, was found out by Scott, (who kept her secret though,) and felt no more repentance on chronicling her success, than would a Lady Violetta of May-Fair now-a-days, were she to promulgate how popular she was during the vexed course of private theatricals, as the heroine of 'The Dream at Sea.'

NEW NOVELS.

Paul Foster's Daughter. By Dutton Cook. 8 vols. (Hurst & Blackett.)—This novel has the rare merit of growing more and more interesting as it proceeds;—it is not often that a novel so witty, wise and healthful in spirit offers itself for perusal. The characters are most of them artists, not of great repute and foremost rank, but artists living and struggling, loving their art and doing their best, though not always realizing their ideals. There is a pleasant vagabond Bohemian relish about the book,—the author himself seems to have dwelt in Bohemia and knows its ways. With all its pleasant rollicking fun, there is no mixing up of things, no putting right for wrong, nor making them so alike that the candid reader who should question which is which, must be content with the showman's affable reply, "Whichever you please, my little dears"! It is a thoroughly right-minded book—but the morality is not fault-finding or supercilious; it does not condemn with an epithet, nor palliate wrong doings by artful adjectives. The rooms in Burke's Buildings, St. Dunstan's Inn, are depicted in all their comfortless squalor, but they are redeemed with pleasant touches. Mrs. Giles, the laundress, with her broad kindness and burlesque coquetry, is worth her weight in gold—she would brighten up the lot of dwellers in chambers even more dirty and dilapidated than those of St. Dunstan's Inn. The respectable household in Gloucester Place, Regent's Park—old Mr. Erle, the broken invalid, the remains of a Regency dandy Jeffrey, the eldest son and Edwin, his half-brother, with the solemn butler and terribly dignified housekeeper, are all bits of real life. There is not much plot in the book, but great play of character. There is nothing slurred over or idly done; the book is spirited and the style easy,—but it is all careful work, as solidly done as if it had been intended to last a hundred years. Paul Foster is an excellent character,—the unsuccessful great artist of the old High-Art school: "plenty of muscled, a good deal of nudity, brick-dusty colour splashed on with a scene-painter's brush," as his

nephew compendiously describes his pictures. His daughter Sylvia, the heroine, is a young lady who will find an adorer in every man who reads the book,—and every woman who chances to have black hair, will try to find consolation in the thought that there are such blemishes as freckles to compensate for golden locks and the complexion that goes with them! Newton Dax, who has wrecked his wild, wilful life and spent his substance in riotous living—lying stranded and solitary in those comfortless rooms in St. Dunstan's Inn, will find sympathy with the reader—though there is no attempt to make him better than he is,—but the good is taken into consideration; he is not characterized by an epithet,—he is worked out, and the reader will love him as much as Edwin did. What are we to say to Mr. Septimus Rook, the articulated clerk? We are half ashamed to confess that we like him almost as well as the lawful hero, Edwin; though, of course, Sylvia would have merited degradation from her rôle of heroine if she had done anything of the sort. And Miss Amelia Vane, the actress? We do not forgive Edwin for his stupidity, but he might have done worse than make her his early idol. The sketch of her life and career is very delicately drawn, and is true to the fact of things. The great merit in the book, apart from the talent which came by nature, is the evident care and painstaking to finish every part, and to keep the right proportions between the characters. The progress of the story and the general effect is never spoiled by too much detail; and the author never shows any preference for one piece of his work over another; every portion has its due share of care and attention. Poor Babette, the pet cat of old Mr. Erle, is as carefully dismissed as if she had been one of the Christians in the story; and the little bit about her after the death of the old man is as good as anything in the book. We have not gone into the merits of the story, because the interest depends on the play of character: the mere outline would give little idea of the effect. We recommend our readers to get the book for themselves. It may not be in their line: they may prefer tales in which dukes, proud countesses in all their diamonds, with mysteries, treasons, gypsies, missing heirs and long-lost daughters. We can only say that we have read 'Paul Foster's Daughter,' every word of it, and we will thank the author to write another novel as soon as he can, taking care that it is of the same quality as the present sample.

The Leighs; or, the Discipline of Daily Life. By Miss Palmer. With Illustrations by Walter Reynolds. (Hogg & Sons.)—'The Leighs; or, the Discipline of Daily Life' is a well-meant little book, neither wiser nor worse than many others of the same class. It is somewhat after the model of Miss Sewell's works, but it lacks the talent and the interest with which that lady invests her minute miniature-painting of common life scenes. The didactic portion, too, is somewhat flat; but the work is, on the whole, one that young persons may get good from, and parents and guardians in search of a gift-book might bestow 'The Leighs' with perfect safety; and the young recipients would, we fancy, be sufficiently interested to give it a place on their shelves, even though it should not obtain the honour of becoming a first favourite.

John Woodburn, Royal Navy. By Chartley Castle. (Saunders, Otley & Co.)—Mr. Chartley Castle does not fear to deal with the noblest types of the heroic. Wellington and Nelson are brought upon his stage, shaking hands and talking affably with John Woodburn, an officer of the Royal Navy, who, by merit imputed unto him by the artist, rises to be "a Baronet, and in due course becomes Rear, Vice and Admiral." There is no need to say that so exemplary a gentleman marries towards the conclusion of the story; and that "he and his lovely wife, the Lady Maria, have never regretted the day they went to church." As for John Perriam, the Admiral's "butler and factotum for many years," in spite of proffered testimony that he was, in his prime, "as smart a tar as ever stepped on ship's deck," he so closely resembles the upright and thriving greengrocer of ordinary life ashore, that it is difficult to believe in his nautical achievements. Indeed, this naval novelette is

throughout seasoned with the salt of the Surrey Theatre, instead of that of Old Ocean. The roar and swell of "the deep, deep sea" give it neither breadth nor power. What rank ought to be assigned to Mr. Castle, as a writer of sea-ballads, we leave to the decision of such admirers of Dibdin's songs as may happen to read the lyric effusion of our author beginning—

Thou over the world, and I at home,
The one must linger, the other must mourn;
Yet our hearts will flee o'er the sounding sea,
Mine to thy bosom, and thine to me.

—Even giving the poet credit for a misprint of "mourn" for "room," we cannot praise either his aim or his execution.

OUR LIBRARY TABLE.

A Woman's Wanderings in the Western World: a Series of Letters addressed to Sir Fitzroy Kelly, M.P. By his Daughter, Mrs. Bromley. (Saunders, Otley & Co.)—However interesting it may have been to Sir Fitzroy Kelly to learn from time to time the progress made by his daughter in her tour through certain parts of North and South America, and however becoming it was in the lady to post a regular series of letters to her father, her indiscretion is not the less manifest in publishing, after the lapse of seven or eight years, epistles which, when first penned, were calculated to afford gratification to none save intimate personal friends. An atlas and the exercise of common intelligence will impart to the most ignorant reader nearly all the information on Transatlantic countries that Mrs. Bromley offers her reader. She enumerates the several cities she visited; and states that those cities contained hotels, clean or unclean, economical or expensive, well conducted or the reverse. Nowhere do we become acquainted with the inhabitants of the lands she passed through. Even in the few passages where she attempts to delineate American vulgarity and dishonesty, she only succeeds in displaying the prejudices and narrowness of an English lady, unspeakably shocked at finding hernotions of refinement and gentility set at naught. It would appear that Mrs. Bromley lost her equanimity on first landing at Charleston, and never recovered it till she was homeward bound. No one pleased her. Everything offended her. "Until Americans cure themselves," she maintains, "of some of their personal habits, to which it would be disagreeable more particularly to allude, I think they can scarcely be suffered to class themselves among civilized nations, and certainly not among civilized society. I have rarely seen, on our side of the Atlantic, peasants or artisans so offensive in their personal actions as I regret to say those who call themselves American gentlemen." Doubtless American gentlemen will feel acutely the sting of Mrs. Bromley's criticism. But not content with lashing them for "personal habits, to which it would be disagreeable more particularly to allude," the fastidious lady mentions some of the disgusting practices of which they are guilty. It appears that the citizens of the United States are such nasty creatures as to enjoy drinking water and milk-and-water. "There is water in the trains," observes Mrs. Bromley, enlarging her description of this offensive usage, "water in the boats, water in the railway-stations, water in the drawing-rooms, and to make matters worse, at dinner (I am speaking of the *table d'hôte* dinners on the road), instead of taking a little wine or beer, like people in general, they drink oceans of milk diluted with water. It is to me most unpleasant to look at, especially when accompanying rich *entrées* and sauces, not to speak of fat pork, which is also a very favourite dish, but does not in my opinion look at all agreeable in juxtaposition with a great tumbler of milk." It can be no matter of astonishment that ruffians addicted to perennial excess of milk-and-water should be in other respects hideous examples of moral depravity. "Their propensities towards thieving or annexing" are such that "you are solemnly warned by notices always to lock your door and remove your key when you leave the room, 'if you wish to avoid being robbed,' and to bolt your door inside at night 'for fear of night visitors.'" Ordinary travellers would see in such warnings an indication of the evils unavoidably consequent upon the vastness of

Digitized by Google

of the river this tube lies—its length of a quarter of a mile presenting, with its various gradients and curves, the appearance of a vast snake, sinuous but motionless. It is not circular, but resembles an ordinary railway tunnel, its internal height being 2 feet 9 inches; and its width measuring at the springing of the arch 2 feet 6 inches, and at the springing of the invert just 2 inches less. Formed of nine-foot lengths of cast-iron, fitted with common socket-joints and packed with lead, the passage is made with a proper diversity of curves and inclines. One gradient represents the incline of Holborn Hill, another that of Skinner Street, whilst the minimum curve is of 40 feet radius. The exhausting apparatus offers the point of difference between the works at Battersea and those employed in the City by the Electric and International Railway Company. In the City the vacuum is created by a pump; at Battersea the exhaustion is effected by the revolution of a fan, 21 feet in diameter—which may be described for the moment as a hollow disc—that by purely centrifugal action draws the air from two branch pipes rising from the tube, with circular mouths 3 feet in diameter, placed opposite to each other at a distance of 3 feet. The fan is capable of working eight such tubes simultaneously. The air rushing along the tube to fill up the vacuum thus created, propels the cast-iron despatch carriages, running on rails cast in the bottom of the tube. As the loads in the despatch carriages are not much more than half a ton, an exhaustion of from 7 to 11 inches of water gives a velocity of about 25 miles an hour.

The relation of this ingenious contrivance to the Atmospheric Railway (which, at least for the present, commercial considerations have condemned to be ranked amongst the splendid failures of mechanical achievement) will be best illustrated by recounting the various stages in the history of Pneumatic Propulsion. From the time of M. Papin, who first proposed to employ the rarefaction of air in a cylinder to act at great distances, the question how atmospheric pressure could be converted into locomotive force available for the conveniences of society, has been a problem of lively interest to engineers. Towards the close of the last century it engaged the attention of two men, of widely different mental organization—Coleridge and Murdoch:—

First Voice.

But why drives on that ship so fast,
Without or waves or wind?

Second Voice.

The air is cut away before,
And closes from behind.—*Ancient Mariner.*

—While Coleridge was driving the *Ancient Mariner's* ship on her fantastic voyage by vacuum and pressure, Murdoch was meditating how he could make the same instruments letter-carriers and parcel-deliverers. The poet created his vacuum and applied his pressure by the aid of "a spirit" that "made the ship to go." The ministering power at the engineer's service was the spirit of the watery vapour, working an air-pump. His plan, however, consisted simply of an exhausted tube, through which might be propelled a hollow sphere containing letters and packages. The year 1810 heard the proposal of Medhurst, the Danish engineer, to put letters and goods in a canal (6 feet high and 5 feet wide, and containing a road of stone and iron) and project them by means of atmospheric rarefaction and compression. In 1824, an Englishman, the ingenious Mr. Vallance, made a similar and better suggestion. His daring plan was to connect Brighton and London by means of an enormous tube, through which, by pumping out the air, carriages were to be propelled with the velocity of a cannon-ball. This project was, in its day, the cause of much laughter and discussion, but beyond the notice of Thomas Francis Fortune, the then notorious author of 'The Epitome of the Stocks,' and countless other publications relating to monetary speculations, it made no advances to the favour of capitalists able to carry it out.

Another proposal was made by Medhurst. It was not long ere he discovered that his original proposal could never be brought to work, and advocated as an improvement on his first suggestion,

the use of a smaller tube, from which the air should be exhausted by a pump before a piston introduced into the tube; the motive force of the piston, as it was driven along the passage by the closing in of the air behind, being conveyed to carriages outside the tube through a longitudinal opening. This opening was to be closed by a hydraulic apparatus, called a water-valve. Beautiful as Medhurst's scheme was in theory, and comprising all the leading principles of the Atmospheric System which, a few years afterwards, solved the scientific problem of the mechanical possibility of converting vacuum and pressure into the agents of locomotion, it was at that time impracticable, and his experiments were unsuccessful. The water-valve refused to exclude the air from the tube. Another valve was several years later (in 1834) substituted by Pinkus for the water-valve, but with the same result of failure. There was still need of another inventor. That power appeared in the person of Murdoch's pupil in the "Soho Factory," Samuel Clegg. Born in 1781—the same year that witnessed the birth of George Stephenson—Samuel Clegg lighted Westminster Bridge with gas in the year 1814. The valve, invented by him in conjunction with Mr. Jacob Samuda, of the Southwark Iron-works, gave the perfecting touch to Medhurst's proposal, and led to the construction of the Kingston and Dalkey, the Croydon, and several other atmospheric lines. It is not necessary here to examine the causes of the failure of the Atmospheric System. It will be time enough to do so when the public shall again wish to waste their money in giving it a trial. The foregoing summary aims only at showing the reader the points of distinction between the Atmospheric Railway of Clegg and Samuda, and the strong similarity—indeed as far as any great principle is concerned, the identity—of the Pneumatic Tube and the early proposals of Murdoch, Medhurst and Vallance, out of which the Atmospheric Railway proceeded. Murdoch and Vallance (and Medhurst in his first proposal) contemplated the use of a pneumatic tube for the conveyance of parcels. With them the motive power and the thing moved were both to be inclosed in the tube. It is the same with the Pneumatic Company. Medhurst and Vallance intended to employ a pump (even as Mr. Latimer Clark does at Lothbury), whereas the new company achieves the requisite atmospheric suction by means of a revolving fan.

Of the mechanical success of the Pneumatic Despatch Tube there is no room to doubt. The probable commercial success of the company is another question, which will depend altogether on the price at which they will be able to sell, and the rate at which the public will be ready to buy their services. The principal sources of expense in constructing such a tube in London and working it, are too manifest to require enumeration. In like manner the advantages of such a system as an engine of postal conveyance and delivery, and as a means of speedy communication between the different quarters of the town are so great and conspicuous, that the promoters are sure of a cordial welcome from the public. "The company," say the directors in their Prospectus, "propose to lay their first line from St. Martin's-le-Grand to one of the principal district post-offices, in a manner specially adapted to the requirements of the service, at the same time opening stations on the line for general service. The success of this work once practically demonstrated, the company propose to proceed gradually with additional lines to the other district and principal post-offices, the several railway termini, and other convenient stations to be established in the chief business and residential quarters of London, on such a plan that ultimately every important point of communication may be embraced in a complete system, through which a rapid and continuous circulation will be maintained." We understand that the company even contemplate to discharge the functions of commissionnaires as well as carriers. The adoption of such a course would almost effect a revolution in the minor economies of London life. That the company have before them a large field of enterprise may be estimated by the fact, that the Post-office service by carts and vans used

in the metropolis consumes 11,000*l.* yearly, and that the annual cost of the Railway Small Parcels' service in town is computed at 38,000*l.*

ARCHÆOLOGICAL INSTITUTE.

THE Meeting this year, at Peterborough, was remarkably successful. It commenced on Tuesday the 23rd ult., when cordial expressions of welcome were tendered by the local authorities, and preliminary formalities were gone through, which led to a valuable and interesting address by the Rev. T. James on the Archaeology of Northamptonshire. The Members afterwards availed themselves of an invitation to visit Thorpe Hall and Thorpe Church and Tower. The evening was devoted to a paper read by Mr. Parker 'On the Ancient Houses, Domestic Chapels and Hospitals of Peterborough and its Neighbourhood.' At the Meeting of the Historical Section, in the Cathedral Grammar School, the following day, the Rev. J. Earle, late Professor of Anglo-Saxon at Oxford, read an interesting paper 'On the Local Nomenclature of the County.' The Rev. Abner Brown contributed a paper 'On Certain Existing Landmarks of Early Ecclesiastical History'; and excursions were made afterwards to Barnack, Withering and Castor Churches. The Dean of Peterborough received the Members and friends of the Institute in the evening, and the pleasure of the *Conversazione* was heightened by the very excellent singing of choristers placed in the Gallery of the Hall. A pleasant walk across the Deanery Garden, passing a mound, led to the College Training School, where the temporary Museum had been formed, and which, for this occasion, was brilliantly lighted by gas. We have already adverted to Mr. Albert Way's leading object in forming this Collection; but the numerous and liberal contributions of great variety demand a further notice. Among the most attractive of these numerous treasures may be mentioned the following:—The gold rosary and crucifix which belonged to Mary Stuart, exhibited by Mr. P. H. Howard, of Corby Castle. The gauze veil, embroidered with letters of gold, which Mary wore at her execution, was contributed by Sir J. Cox Hippeley, Bart. It was given to the Countess of Arundel, and subsequently belonged to Cardinal York. The gold Darnley betrothal ring marked HENRI' D'ARNDLEY-1565, the date of her marriage, was contributed by Mr. Edmund Waterton. The ring is stated to have been found near Fotheringhay Castle. Mr. Howard, of Corby Castle, also forwarded other relics of the Stuarts of considerable importance, and among them portraits of the Young Pretender and his wife, together with an interesting oil painting on a small scale of Cardinal York in his robes, the face being seen in three-quarter. Sir Philip Malpas De Grey Egerton, Bart., M.P. also exhibited a well-painted profile of the Young Pretender taken at his best period of life. The same owner exhibited the George and the deep blue ribbon, now quite black, which Prince Charles Edward constantly wore. They were inclosed in a frame, together with a document authenticating them and signed, "Roma questo dì 20 Lugli 1816, Vicenzo A Vocato Lupi." Sir Philip Egerton also contributed a very precious miniature, painted on copper, of Charles the First as he appeared during the troubles which closed his life. He allowed his beard to grow, and, instead of the well-known peak on his chin, the miniature displays a broad extent of grey hair contrasting singularly with the hair of his head, which retains its original very dark colour. At the back of the copper is a portrait of Bishop Juxon, the faithful friend who attended his royal master on the scaffold. A very curious picture of James the First as a boy was exhibited by the Hon. G. W. Fitzwilliam. This portrait was presented by Mary Queen of Scots to Sir William Fitzwilliam on the morning of her execution, in gratitude to him for the humane treatment she had met with during her imprisonment at Fotheringhay Castle, whereof he was governor. It is circular and inscribed ETATIS SVÆ VI. A beautifully modelled head of Charles the First, in alto-rilievo, but ridiculously mounted with four wings as a cherub, in a deep frame, was contributed by the Earl of Westmoreland from Apthorpe. A beautiful jewelled reliquary, late sixteenth century, and formerly be-

longing to Catherine of Braganza, was forwarded for exhibition by Mrs. Gordon Canning, of Hartpury. Mr. Octavius Morgan, M.P., sent a large collection of Papal and Episcopal rings and an extensive series of chamberlains' keys. Mr. Hopkinson forwarded a striking picture of a reformer, painted in the style of Lucas Cranach, and dated 1537. Major Frankland exhibited a fine enamelled portrait of Oliver Cromwell on the top of a snuffbox, and two portraits of Fleetwood, one of them a fine miniature by Cooper, were forwarded by the Rev. Charles Fleetwood Porter. A collection of very beautiful golden Etruscan ornaments was exhibited by the Marquis of Northampton, and a bracelet composed of gold Macedonian staters of Philip the Second, belonging to the Rev. W. Hamilton Thompson. Mr. Samuel Sharpe exhibited a selection of gems from the Poniatowsky Collection. An enamelled elephant, bearing the monogram of Charles the Eighth of Denmark, and forming the insignia of the celebrated Danish Order of the Elephant, was contributed by Mr. Octavius Morgan, M.P. Mr. Henry Goddard exhibited an enamelled portrait of Alderman Beckford. The fragment of a very richly-embroidered chasuble belonging to the Rev. Edward Moore, Shalving, formed a conspicuous object in the collection. It bore a crucifixion in the centre, and an angel with shield of arms on each side and placed in the limbs of the cross. An alto-rilievo from Peshawur, in Afghanistan, attracted considerable notice from the character of its sculpture, which evidenced the influence of Greek or Classic compositions of the best period. It was recently sent from India, and exhibited by Major Hastings. A handsome Agraffe or ornament for a hat worn in the time of James the First, set with rubies, and springing from a group of St. George and the Dragon, in which a large pearl formed the victor's body, and wherein enamel gave its choicest colours, belonged to Mr. H. Cat, of Brighton. The Marquis of Northampton exhibited the Howard Book from Castle Ashby, the famous Clan Clephane ivory horn, and also the Clephane iron arm, an ingenious piece of mechanism to supply the place of an arm lost in battle by one of the gallant Clan Clephane, of Carslogie, Cupar. Mr. E. J. Baumgartner exhibited a fine helmet of a hat-shape, together with a pair of metal gauntlets from Scinde. A large collection of very choice illuminated MSS. were deposited by the Rev. Fuller Russell and Mr. William Tite, M.P. The latter contributed also many specimens of early printing, and the former eight very fine examples of the works of Wynkyn de Worde, extending in date from 1493 to 1509. The Rev. Fuller Russell also displayed a collection of autographs, including those of Bishop Andrewes, Lord Bacon, Archbishop Laud, Juxon, Henry the Eighth, Archbishop Whitgift, General "Monck" (dated the 25th of March 1659) and a letter of Addison. The Society of Antiquaries also contributed the Psalter of Robert de Lindeseye, Abbot of Peterborough, who died 1222, and also the 'Chronicon Petroburgense.' Mr. Palmer, of Great Yarmouth, exhibited the head of a pastoral crozier, richly enamelled and gilt, of the fourteenth century. The Rev. Fuller Russell exhibited a small diptych by Memling, representing on one leaf the Crucifixion, and on the other the Virgin and Child appearing to Jeanne Duchess of Bourbon kneeling at a *prie-dieu*; she died 1482. A portrait named Queen Elizabeth was contributed by Mr. Graves. Among the so-called representations of Mary Queen of Scots were two from Althorp, contributed by Earl Spencer. An absurd picture of a lady in the costume of no definite period, exhibited by the Rev. Charles Caldwell, and the counter-part of a painting at Hampton Court, ridiculously termed, in the Catalogues, "fair Rosamond." A Dutch lady of the period of Rembrandt in the ordinary domestic costume, belonging to Mr. J. Mathews, may be cited as one of a very large number of pictures which merely show to what lengths owners of pictures will wander for the sake of connecting their names with that of the unfortunate and universally-admired Mary Stuart. A picture of considerable interest was contributed by the Duke of Devonshire from Hardwick, representing James the Fifth of Scotland and Mary of Lorraine, the parents of Mary Stuart.

They are placed side by side, resting their hands on cushions, with coats-of-arms between them, the lower shield exhibiting the lady's quarterings impaled with those of her husband. The two portraits have been separately, and very indifferently, engraved in Pinkerton's 'Iconographia Scotica.' The valuable Meyrick portrait of Mary placing the wedding-ring on her finger was mentioned in our impression of last week.

On Thursday the members of the Institute made an excursion to Oakham, where Mr. Parker pointed out the architectural features of the church and the old hall. A limited number of persons was invited to visit the rectory, where the Hon. and Rev. H. Finch explained his pictures, many of which afford authentic portraits of very distinguished historical personages. Among them may be cited 'Adrian Stokes and the Duchesse of Suffolk' (mother of Lady Jane Grey), by Lucas de Heere, and formerly in the collection at Strawberry Hill.—At Stamford the mayor and corporation entertained the members of the Institute at a handsome luncheon, and the afternoon was pleasantly spent in inspecting the many objects of interest in this venerable town. After seeing the monument of Lord Treasurer Burleigh, in St. Martin's Church, many visitors proceeded to view the mansion of Burghley and enjoyed a lengthened examination of the pictures and objects of Art treasured in the apartments. In the evening a meeting was held in the Corn Exchange, Peterborough, under the Presidency of Mr. O. Morgan, M.P., when Mr. H. Bloxam read a communication 'On the Monumental Remains in Peterborough Cathedral.' The Rev. J. L. Warner read a paper 'On the Manuscript Chronicle and Chartulary of Robert Swapham,' preserved in the Cathedral Library.—On Friday morning the Historical Section met in the Grammar School, and Mr. Babington contributed a paper 'On the Ancient History of the Fens.' Mr. Robert Chambers, Mr. James Yates, Mr. Freeman and Sir Charles Anderson, Bart., took part in the discussion which followed.—On Saturday excursions were made to Thorney Abbey and Croyland Abbey; and on Monday many of the visitors proceeded to Elton and Oundle, dwelling of course with particular interest upon all that marks the site of that which once was the gloomy prison of Fotheringhay.

ON A NATIONAL MUSEUM OF NATURAL HISTORY.

BY PROF. OWEN.

(Continued from page 120.)

ONE has only to glance at the latest published maps, and note the proportion of the intertropical earth yet unexplored, in order to adjust our outlook for accommodation room and regulate our expectations of the new forms and species of animals that may make demands upon the space of a National Museum. But space is required not for the mere housing of the zoological specimen, but for convenient display, accessible to every scrutiny of parts needed by the science; and not merely for such disposition of the individual specimen, but for orderly systematic array of the series. The galleries should bear relation, in size and form, to the nature or characteristics of the classes respectively occupying them. They should be such as to enable the student or intelligent visitor to discern the extent of the class and to trace the kind and order of the variations which have been superinduced upon its common or fundamental characters. To show how the mammalian type is progressively modified and raised from the form of the fish or lizard to that of man, —to illustrate the gradations by which one order merges into another,—would require, according to the best estimate I have been able to make on the foregoing data and others too numerous to be now specified, a Mammalian Gallery of 850 feet in length by 50 feet in breadth.

An osteological collection is as essential to the illustration of the Vertebrated classes as a conchological one is to that of the Molluscous classes. Nor should the size of an animal be a bar to the obtainment of adequate space for the exhibition of its skeleton in a National Museum of Natural History. In the order Cetacea the proportion of

the skeletons would exceed that of the stuffed specimens, especially in the genera of largest bulk. *Balæna*, *Balaenoptera*, *Physeter*, *Hyperoodon*, should be represented by the skeleton of the largest species in each: Skulls and separate bones would exemplify the differences on which the other species have been founded. But as the exterior parts of animals are the seat of much more variety than are the interior organs, the proportion of mounted and articulated skeletons in other and more populous orders of Mammals, required by a National Museum, would be smaller than that of the stuffed and mounted skins. Upon these considerations, I have estimated the proportion of an Osteological Gallery for the Mammalian class, which should be contiguous to that of the stuffed specimens, at 500 feet in length by 50 feet in breadth.†

BIRDS.—In the National Museum of every country the class of Birds is the best exemplified: in our own it is the only one exhibited as a class.

Here the vertical or wall space of a gallery of 300 feet in length is appropriated to the stuffed birds, and, along this wall space which, through projections into the gallery, is of 900 feet in extent, about 2,500 species of birds are exhibited, but in a too crowded manner. This, however, affords a good basis for estimating the extent of an Ornithological Gallery for such a display of the known class of birds as ought to be made according to my view of the scope and applications of a National Museum of Natural History.

Along 900 feet of wall space, in cabinets 10 feet in height, may be arranged stuffed specimens of say 2,500 species of birds. The British Museum possesses skins of 4,200 species of birds: the number of species described is about 8,300.

Birds are most attractive to the sportsman: the largest proportion of the collection of the foreign traveller usually appertains to the feathered class. The species, mostly new, collected by Gould in his three years' life amongst the woods and wilds of Australia, fill nine large volumes by their descriptions. Looking forward to the additions to the class of Birds that may be expected from the interior of Africa, from Madagascar, from Borneo, from New Guinea and from the great proportion of Australia not explored by Gould, a vast and rapid increase of singular and interesting forms may be expected,—is, indeed, certain. But on the basis of the class, as it is now known, and exercising the same discretion in the selection of specimens for exhibition which governed the arrangement of the Bird series in the British Museum, a Gallery of 850 feet in length by 50 in width should be assigned to the class *Aves*. The remark previously made on the osteology of Mammals applies to that of Birds, save that the number of articulated skeletons would bear a smaller proportion to the stuffed specimens. But there are classes of objects required to complete the exhibition of the Natural History characters of Birds, not needed for that of Mammals, viz., the nest and the eggs, with some singular preliminary structures in a few species. The gallery for the osteology, eggs and nests, and artificial bowers, of Birds, can scarcely be estimated at less than that for the osteology alone of the class Mammalia.

Of the class *Reptilia*, including, as in Cuvier's system, crocodiles, lizards, chelonians, serpents and batrachians, about 2,000 species are now known. In a gallery of 70 feet in length, about 200 species can be properly exhibited. Some of the crocodiles attain a length of from 20 to 25 feet. Some of the turtles are of large size. A gallery of 250 feet in length would be required to illustrate, by selected species, a continuous series of the entire class *Reptilia*.

The different stages of the metamorphoses of the frog, toad, hyla, pipa, and other leading forms of the batrachians should be exhibited. Those of the common frog should also be illustrated by enlarged wax models for the instruction of the public visitors.

† In the Museum of Zoology at Leyden thirty skeletons of Cetacea occupy a gallery of 200 feet in length; ten stuffed specimens of the smaller Cetacea occupy a gallery of 55 feet in length.

So likewise, in reference to the class of *Fishes*, the chief stages in the growth of such species as the salmon, which stages are known by the local terms parr, smolt, grilse, &c., should be exhibited. And in several species of this class the male and female are distinguished by well-marked external characters, which should be exhibited. Of 4,000 species of fishes in the British Museum, 754 occupy the exhibition space of a gallery 70 feet in length. The number of named species of fishes now amounts to upwards of 7,000. The largest known fish of the present period is a British species, in so far as specimens have been cast ashore, within the present century, near Brighton, and at the Western Isles of Scotland; it is the basking shark, *Selache maxima* of Cuvier, which attains a length of upwards of 30 feet. It is only in a public national collection that this rare and remarkable shark could be expected to be exhibited in a properly prepared state. In a gallery of 300 feet in length the principle of selection would have to be exercised in order to give in a connected series all the ordinal and family modifications of the class of Fishes.

Reptiles and Fishes do properly constitute one great natural group of cold-blooded animals. And the beautifully fine series of gradations by which the cold-blooded air-breathers pass through the amphibious series to the water-breathers, are well exemplified in the modifications of the skeleton. I have, therefore, assigned a gallery of 250 feet in length for the osteology of the *Hematoctya*, or reptilian and piscine cold-blooded animals.†

INVERTEBRATA.—The reasons which have led, in the allotment of space, in most public museums, to the exposition of a larger proportion of the class of Birds than of other Vertebrata have produced the same effect in regard to Shells in the Invertebrate series.

The texture, form, colour and pearly lustre of these skeletons of the Mollusca all accord with our ideas of the Beautiful: moreover, their preparation for exhibition demands the smallest amount of skill and time, and they are almost imperishable. The substitution of fresh specimens for those that have faded in colour by long exposure to light is the chief work required to maintain the good condition of a collection of Conchology.

As a basis for calculation of the space that should be allotted in a public museum to the Molluscan classes, the readiest is the amount of space so allotted in our own; and its relations to the present known extent of that great primary division of the Animal Kingdom. After the class of Birds, the display, next in completeness, of a natural group of animals is that which the exhibition of the shells of the Mollusca affords in the British Museum.

The cabinets on the floor of the Bird Gallery, which is 300 feet in length, are exclusively appropriated to this attractive class of natural objects. Here are arranged and displayed about 100,000 specimens of shells, illustrating about 10,000 species of Mollusca.

The well-known private collection of Mr. Hugh Cuming, of No. 80, Gower Street, contains shells, in first-rate condition as to form and colour, of upwards of 16,000 species of Mollusca; and this may be regarded as the present known extent of the existing species of the shell-bearing Mollusca; but the annual increase is great. There are, however, as I have already said, classes and orders, as well as genera and species, of Mollusca which have no testaceous covering. The class Tunicata, the orders of Gymnosomata, the Nudibranchia, Inferobranchia and Dibranchia, half of the Tectibranchia, the families *Limacidae*, *Oncidiidae*, *Pivolidæ*, are all naked Mollusca; as are odd genera, here and there, in some of the better defended orders.

Of course, in a National Museum of Natural History, a general view of the whole Molluscan group should be given; and it is more especially incumbent to afford the public a view of those modifications of the class which are least likely to be seen in collections of inferior importance or of more limited scope. Such modifications include the exquisite and beautiful forms of some of the

soft and shell-less marine orders of Mollusca above cited. Wax models coloured after nature, and specimens preserved in spirits, afford the means of completing a consistent exposition of the Molluscan sub-kingdom.

As shells, moreover, are but the exo-skeletons or protective exuvie of the animal, and as in all Mollusca, with very few exceptions, more or less of the soft parts are protruded in the living animal, and a large and characteristic part of the animal is so exposed in the locomotive shell-bearers, the art of the modeller has been put in requisition in all public museums to give an idea of the true outward form and character of the Mollusk, though it be usually restricted to one species of a genus or family. The specimens of Mollusks in which the soft parts are preserved in some clear antiseptic fluid are more numerous; the anatomy, as the indispensable guide to a knowledge of the nature and affinities of the Mollusca, has necessitated collections of the entire animals almost co-equal with those of their mere shells. I estimate, therefore, supposing a gallery of not more than 300 feet by 50 feet in breadth be assigned to all the classes of the Molluscan sub-kingdom, that the addition of the vertical or wall space (given to the class of Birds in the British Museum) would only suffice for an equalised and consistent exhibition of all the chief modifications of the sub-kingdom as it is at present known; the principle of selection governing the amount displayed to the same degree in which it has governed the display of the proportion of shells now shown in the floor-cabinets of a gallery of 300 feet in length.

Some years ago a Committee of the British Association memorialized the Trustees of the British Museum on the subject of the combination of the fossil with the recent shells.

I assume that, practically, the series of stuffed Mammals will be kept apart from the fossil remains of that class in all collections of Natural History; and the like with respect to the stuffed Birds, Reptiles and Fishes: in other words, that the Department of Zoology will continue to be distinct from the Department of Geology and Palæontology. But adherence to the strict letter of such practical or administrative arrangements would be neither necessary nor wise. Fossil shells readily afford duplicates. The genetic and truly philosophical series, according to geological epochs, may be kept quite complete in the Geological Department; and yet examples of an *Orthoceras*, a *Lituie*, a *Goniatile*, a *Ceratile*, an *Ammonite*, a *Hamite*, a *Baculite*, a *Turritile*, and a *Belemnite*, might be spared, to be most instructively associated with that poor remnant of the order of siphonated-chambered shells which is exemplified by the genus *Nautilus* in the collection of existing Mollusca. Adopting the association of fossil with recent shells, on the same principle, and in the same limited proportion—i. e., in order to indicate how the wide gaps in the recent series of Molluscan forms had once been filled up, the practical Arranger and Curator of a National Museum must expand his estimate of space for his Zoological Department accordingly.

ARTICULATA.—Of Insects, 150,000 species are now known, which is about more than double the number of all the other articulate classes combined, viz.:—*Arachnida*, *Myriapoda*, *Crustacea*, *Cirripedia*, *Epizoæ*, *Annelida*, and *Entozoa*. The instances of species remarkable for bulk, such as the great Japanese crab, of 12 feet or more from the tip of one claw to that of the opposite, are rare and exceptional; but smallness of size is met by multiplicity of species. Two entire classes, *Annelida* and *Entozoa*, the sub-class *Epizoæ*, some *Cirripedes* and other *Crustacea*, most *Arachnida*, and some insects, especially the larvæ, require to be preserved in antiseptic fluid, or to be represented by wax models. Nor are exhibitions of the articulate provinces of animal life on a scale proportionate to that of the molluscan and vertebrate plans of structure. I have estimated that a gallery of 250 feet in length by 50 feet in breadth should be provided. But the principle of selection must guide the Arranger, and on a more restricted scale than in the preceding classes, in availing himself of such extent of space

for systematically arranged and exhibited specimens.

In assigning, also, a gallery of 250 feet in length by 50 feet in breadth, to the Radiate province, I have had regard to the difference of size of most of the species as compared with that of the majority of the articulate animals, especially insects. Some *Medusæ* are more than 2 feet across: a specimen of the brain-stone coral (*Meandrina cerebriiformis*) may exceed a yard in diameter and be nearly a yard in height. And, of course, the finest and largest specimens should be sought out for exhibition in a National Museum.

Of the radiated class of animals, most of the class *Echinodermata* can be represented by their prepared and dried external crusts: the beautiful orders of the sea-urchins (*Echinidæ*) and starfishes (*Asteriada*) are so exhibited. But the *Holothuriada* and other soft vermiform kinds of the class need to be preserved in liquor or represented by coloured models. Indeed, to give an adequate form of the urchin or starfish as it is seen living and moving in its native element, with its hundreds of tubular suckers extended from the ambulacral openings, a wax model of a specimen of at least one of each genus should be added to the series of the shells.

Having at command a gallery of adequate extent for the *Zoophyta*, the Zoological Curator would take the requisite steps to obtain and exhibit, especially if the public collection were that of a maritime and commercial people, illustrations of the growth and structure of coral reefs, by means of adequate masses of those beautiful structures, so as to exemplify the law of growth and order of superposition, of the different kinds of coral-forming zoophytes which build up the lovely atolls and the dangerous fringing reefs, in various parts of the tropical seas.

ETHNOLOGY.—No collection of Zoology can be regarded as complete that does not contain illustrations of the physical or natural history characters of the human kind (*Bimano* order, *Archæcephalous* sub-class). Such illustrations are afforded by casts of the entire body, and of characteristic parts, as of the head, or of the face, of the hand and the foot; also by the bony framework, and especially the skull. Casts of the entire body, for the aims of the ethnologist, should be coloured after life, as in the examples of the Ethnological Department in the Crystal Palace at Sydenham. The attention of philosophical travellers has of late been directed to this exigency in philosophical natural history; and, judging from the number of instructive specimens brought from South America by Sir Robert Schomburgk, and from India by the Brothers Schlagintweit, I have estimated that the Gallery of Physical Ethnology should be 150 feet in length by 50 feet in width, in a National Museum of Natural History.

Such a museum, moreover, requires a special department for the illustration of the natural history of the people's own country. In the British Museum there is assigned to the Zoology of the British Islands a gallery of 85 feet in length by 30 feet in width. It is well filled with the specimens which can be exhibited in a dried state. I shall afterwards refer to the location of the department illustrating the Fauna of a country, in the National Museum of Natural History of such country.

A Museum of Natural History must include, for its consistent completeness, a department of Botany, that is to say, a gallery for a collection illustrative of the characters, structures, and economy of the vegetable kingdom as it now exists.

My estimate of the requisite space founded on that now allotted to the Botanical Department in the British Museum, and on the space allotted to the Museum at Kew, led to the proposition of a gallery of 250 long by 50 feet wide. I am assured by competent and practical botanists that I have not erred on the side of excess of space in this estimate.

GEOLOGY AND PALÆONTOLOGY.—The progress of these sciences has created a new demand for space in Natural History museums, which demand has been more or less liberally responded to in the museum of every metropolis in Europe: first, and most, in Paris, honoured as being the seat and scene of the immortal labours of the founder of the science of fossil remains. The impulse given by Baron

† 'Report on Space required for the Natural History Departments.' Printed by order of the House of Commons.

Cuvier to their acquisition has been followed by the formation of most extensive and instructive collections of the extinct members of the animal and vegetable kingdoms. Of extinct animals only there are at the present date not less than 6,000 genera named and more or less clearly defined.

In many of these genera the number of species already named exceeds—save in the case of a few of the larger genera of insects, *i. e.* *Curculio*, Linn.—that of the known species of any genus of existing animals. Take, for instance, the genus *Ammonites*; whilst many larger groups, *e. g.*, *Brachiopoda*, *Ganoidea*, are almost exclusively represented by extinct species. In fact, of the animals that have calcareous or fossilizable parts in their organization, the number of known extinct species now far exceeds that of the known existing forms; and the knowledge of such fossil species proceeds at a more rapid rate. Were space in a public museum estimated upon a prospective view of future increase,—if space were to be provided for the reception and systematic display of annual accessions,—a larger proportion must be allotted to the galleries of Palæontology than to those of Zoology. And this is in strict and necessary agreement with the nature of things. Existing animals represent the phase of life of the present world, or of the modern epoch in our earth's history. Extinct animals belong to at least a score of equivalent epochs, or to many worlds besides our own.

If, therefore, for a consistently proportional exhibition of all the classes of existing species of animals, according to the principles of selection adopted for those classes that are best displayed in our own and other national museums, a series of galleries, collectively of the extent of 3,750 feet in length, by 50 feet in breadth, be required, it will be understood that the selective principle must be more restrictively applied to the exhibition of the fossil illustrations of the zoology of former worlds in a gallery of 850 feet in length, by 50 feet in width.

In such a gallery, however, I have calculated that a series of rock-specimens illustrative of the structure of the earth's crust, with a corresponding selection of characteristic fossils, arranged stratigraphically, might be exhibited; together with the general palæontological series arranged according to genus, order and class.

No triumph of Science has appeared more marvellous to the intelligent mind than the reconstruction of a form of life that has passed away long ages ago, and the representation to the visual sense of such animal by its framework, so complete as to leave little to the imagination in realizing a complete idea of the once living figure of the extinct beast. In the British Museum the North American *Mastodon*, the South American *Megatherium*, the Irish Giant Stag (*Megaceros*), the New Zealand giant bird (*Dinornis*), are thus exhibited. In the Museum of the Royal College of Surgeons the great Ground Sloth (*Mylodon*) and the Giant Armadillo (*Glyptodon*) are similarly displayed. At Petersburg the huge hairy and woolly Mammoth and tichorrhine Rhinoceros—both colossal beasts once inhabitants of Britain—may be seen; even the thick hide of the first and part of that of the second are there preserved.

Paris, Berlin, Turin, and some other Continental Museums can boast, also, of their more or less complete and unique skeletons of other extinct species of gigantic quadrupeds.

It is the common experience of officers of National museums that no specimens of natural history so much excite the interest and wonder of the public, so sensibly gratify their curiosity, are the subjects of such prolonged and profound contemplation, as these reconstructed skeletons of large extinct animals.

Happily for the fulfilment of this, perhaps, by some administrators, viewed as the primary aim of a public museum, it can be gratified at comparatively small cost. A fossil bone and a coloured plaster cast of it are not distinguishable at first sight,—scarcely by sight at all.

The artificial junction of a series of casts of the bones of an unique fossil skeleton produces a result equivalent for all the purposes of public exhibition to the articulate skeleton itself. Thus, every capital

in Europe, the public museum of each civilized community, may show to the people the proportion of the creatures of former worlds that science has so restored. Requisite space for exhibition being provided, reciprocal interchange of casts would soon furnish such museum with the co-adjusted ground-works of the most remarkable extinct animals that have hitherto been restored.

MINERALOGY.—Minerals, like Birds and Shells, are amongst the most beautiful classes of natural objects; at least, those pure and for the most part crystallized bodies, selected to represent the elementary composition of rocks, have always attracted the eye and excited the desire of possession, by the combined qualities of form, colour, lustre and imperishable density, and the conventional value attached to extreme rarity. And, perhaps, it may be because they are objects of beauty and of price, that the Mineral Series rivals in the proportion which is exhibited, and in its connected arrangement, the other two exhibited classes—Birds and Shells—in our British Museum. The present Gallery of Mineralogy is 270 feet in length; and in 1857 there were exhibited in the cabinets arranged in that space about 15,000 specimens. In 1858, 4,000 specimens were added; and, in 1859, the famous Allan-Greg Collection of 9,000 specimens was purchased, and is now in course of incorporation: these, with additions from other sources, have already raised the collection to 36,000 registered specimens.

From known collections of repute that may be, but are not yet, acquired, an equal ratio of increase is likely to continue. My Colleague, at the head of this department and Professor of Mineralogy in the University of Oxford, is of opinion, and I fully concur with Prof. Maskelyne, that a public collection of Mineralogy should include—1st, a Series of Minerals arranged according to a system of classification on the combined bases of chemical composition and geometrical forms; 2nd, a series of crystallo-graphic specimens selected to illustrate the varieties of crystalline forms exhibited by each mineral; with which should be associated a series of models representing these varieties of form in symmetrical proportions, on a scale dispensing with the need of a lens, easily addressing the eye, and requiring from a student of such series only the use of the hand-goniometer. The elementary labours of the student should be further facilitated by express series illustrative of the various physical characters whereby the mineralogist discriminates between different minerals and determines their external features: such, *e. g.*, as the degrees of lustre, the varieties of cleavage, and of colour. Minerals are, of all substances, the most determinate and durable in regard to colour, of which they exhibit the most complete series of gradations and varieties. Of this quality Werner took advantage in proposing his system and classification of colours, which, in a public museum, ought to have a special series for its illustration, with Werner's Nomenclature and its Synonyms in different languages; so that manufacturers and others might see and know precisely the colour and shade signified by such terms. In those original Papers of John Hunter that have recently been published† there is a chapter "On Monsters," divided into those of the Animal, Vegetable and Mineral Kingdoms. The illustrations of the latter by the Great Physiologist are those "defective formations" or "disposition of one crystal to form upon another" now included in the section of the science termed the "Teratology of Minerals." The series illustrative of this should include the specimens that have assumed deceptive forms by the enlargement of particular planes, by the development of a twin-structure, or through other complex departures from normal form, requiring the goniometer and geometrical aptitude to fathom the right solution. Perhaps, the most interesting of all these ancillary series to the philosophical mineralogist would be that which should exhibit the various kinds of Mineral "Pseudomorphs." Here would be exemplified the transitional capacities of the most obdurate and seemingly unalterable and imperishable of substances. Silice replacing, or replaced by, other and very various stones. The hardest gems

† 8vo. 2 vols. Van Voorst.

becoming degraded, so to speak, by the substitution of less dense and durable matter for their own proper substance: Minerals of the least stable nature mimicking by their external forms those that are the hardest and most imperishable. Prof. Maskelyne assures me that for the due illustration of this interesting branch of Mineralogy an extensive series would be required.

Thus multiples of the same species of minerals would do duty, in a National Collection, in the Classificatory, the Geometrical, the Elementarily-instructive, the Technological, the Teratological and Pseudomorphic series. Moreover, as in the Zoological Department a small apartment is proposed to be so arranged as to make the microscopical inspection of animalcular forms easy to the public, so a corresponding arrangement in the Mineral Department might give as easy an opportunity of observing the exquisitely beautiful phenomena of polarized light, so far, at least, as they are applicable to the discrimination of minerals.

It may be a question whether "artificial minerals" should have a place in this department,—by which I mean the crystallized products of the laboratory and of processes carried on in Metallurgy and other arts. In the Mineral Department of all public Museums are arranged or located those most interesting and mysterious bodies called "Aerolites" or "Meteorites,"—the mineral substances which our earth receives from time to time from extra-telluric space. Already, through my Colleague's energy, the series of these sky-stones in the British Museum now rivals that extensive and formerly unique collection at Vienna; where, by the way, I learn that they are enlarging the exhibition-space of their famous Mineralogical Gallery to twice its former extent.

Basing an estimate, therefore, on the proportion of mineral species which can be exhibited, with the single aim of a classified series, on the ground-floor of a gallery of 270 feet in length by 40 feet in breadth, and on the known ratio of increase, admitting also the necessity or advantage of the several distinct series required for the full fruition or completed applications of a national collection of Mineralogy, I estimate that it should have appropriated to it a gallery of 550 feet in length, by 50 feet in breadth.†

(Prof. Owen's important paper will be completed in the *Athenæum* of next week.)

OUR WEEKLY GOSPEL.

Her Majesty's Commissioners have arranged the principles and general details of the Catalogues for the Exhibition of 1862. Three catalogues will be issued: an 'Industrial Catalogue,' an 'Illustrated Catalogue,' and a 'Fine Art Catalogue.' All matters of a general kind intended for insertion must be sent in to the secretary before February 1; all advertisements before March 1. The price of the Industrial and Fine-Art Catalogues will be one shilling each. The Illustrated Catalogue, which will mainly concern the exhibitors, though it will also have a present and permanent interest for the public of spectators, will be produced on a handsome scale, in super-royal 8vo., so as to range with the magnificent work of 1851. The name and address of each exhibitor will be given, with a brief description of his contribution; the printing and paper for this part of the Catalogue being provided by the Commissioners. Detailed descriptions of articles and woodcut illustrations of them must be paid for by the exhibitor. Editions of ten thousand copies will be struck off from time to time as they may be demanded by the public. All advertisements must first be submitted to Her Majesty's Commissioners.

Under the patronage of Earl Fortescue, the Bishop of Exeter and the Duke of Northumberland, the Members of the British Archaeological Association propose to hold their Eighteenth Annual Meeting at Exeter, from the 19th of August to

† This, of course, is less than the space (Plan, in "Return," delivered 16th of March 1859, and printed by order of the House of Commons) it might be desirable to secure prospectively, for enlargement of the gallery, in reference to the possible increase of thirty years to come, considering the limited proportion of the earth whence our present known minerals have been derived.

the 24th inclusive. They have a goodly list of Vice-Presidents and Committee. The proceedings of the week will include the usual papers, *soirées* and excursions.

We are requested to state that a considerable part of Leigh Hunt's book, 'A Saunter through the West End,' appeared in the *Atlas* in 1847. The contributions were then called 'The Streets of London.'

Capt. Snow, in continuation of our remarks of last week, writes to explain the present state of the Endeavour, and of his proposed voyage to the Arctic Seas, in search of the lost Expedition.—

"Newcastle, July 30.

"The delay occasioned, by trying to get the additional small sum required for our more efficient equipment has been such, as to make it very doubtful about getting through the middle ice this season. I am, therefore, reluctantly compelled to follow the advice and wishes of many persons interested in, and supporting my undertaking, by relinquishing the northern route this year. This does not prevent me trying the original plan by Behring Strait; and as the vessel, with all her material, &c. has been kept by me free from debt (paying as I do everything weekly), there will be no difficulty in proceeding upon my voyage whenever I can, by my own means or otherwise, obtain what more is required. Meanwhile I shall not be idle, but intend turning the vessel to some useful purpose in connexion with science or exploration. At any time I shall be happy to meet the friends who have aided me in this effort to do more concerning the lost Expedition, and thanking them, with the press generally, for all kindly feeling displayed.

W. PARKER SNOW."

Another State Paper on the Thames! Year by year these reports on the adornment of our noble river come and go. They have their little day—whether they be the magnificent dreams of Martin, or the prosaic plans of Cubitt—and then they drop below the tide. The public is supremely unconscious that the most picturesque and various river frontage in the world stands in any particular need of artificial adornment. London, they say, requires more roads and wider, more streets and shorter, more sewers and with a swifter fall, free bridges and more of them, but does not want to see its ample stream straightened and banked, and narrowed into a Dutch canal. London has its own character, and the Thames partakes of it. It is a sea-port; and the salt wave washes "the marble of her palaces," and fawns at the foot of her gardens as well as visits her wharves and warehouses and commercial stairs. It is the growth of ages, having its foundations in the soil before Cæsar leaped on the shores of Kent. Nature and the necessities of man have made the river that which we find it. Very few persons, we imagine, wish to see this work of ages changed. An engineer, or an architect, here and there may be found eager to reconstruct the river-side; but the same ingenious gentleman would like to rebuild Westminster Abbey on "a more regular plan," and remove out of our way the rubbish called the Tower. We may admire his cleverness, but we really do not want his art. There are men who would re-write Shakespeare's plays, or reconstruct the History of England, just as there are men who would transform the Thames into an absurd and intolerable likeness of the Seine. We believe they will not very soon succeed. As we prefer, with all their faults, our own Shakespeare and our own History, so we prefer our own Thames. We have no objection to its being brightened and lightened; to see many more Tudor buildings, like Billingsgate, and a little more greenery, like the Temple Gardens, on its banks; to see some of the unsightly coal-yards put away, and the road along its northern shore extended; but improvements should be conceived in the national spirit, and carried out in the genius of the spot. The present scheme is negative, and therefore right in spirit. It aims at producing the greatest attainable improvement with the least possible change. This principle will recommend it to public indulgence. Any general scheme on the new French model for changing the masculine and picturesque character of our river front would be an error on

artistic grounds, and probably a failure on commercial grounds.

The disjointed portions of an early German Triptych, at Hampton Court Palace, to which we last year called attention, have been brought together and fitted into an elaborately gilded, but very inappropriate, frame, and placed in a conspicuous position in the centre of one of the principal apartments. The cartoons of the Triumphs of Julius Cæsar, by Andrea Mantegna, have been protected by large sheets of glass, and are now seen to much greater advantage. The large chalk drawing, or cartoon, copied by Casanova from Raphael's Transfiguration, is in a miserable dark room, although one of the best and most valuable transcripts of the original picture, and of the same size. It certainly merits a more prominent position, and would, from the dullness of the surface and clearness of execution, be a very good subject for photography. Copies multiplied by this process would render more service to students than any lithographs or line engravings now current; and we hope the authorities will take our second suggestion also into consideration.

The Royal College of Surgeons is in treaty with the Company of Barber-Surgeons, we understand, for the purchase of the picture of 'The Granting of the Charter to the Corporate Body by Henry the Eighth,' the picture to be preserved in future in Lincoln's Inn Fields. The price named is 3,000*l*. If this admirable work is to be disposed of at all, we should much prefer to see it in Trafalgar Square. The first work in England by Holbein, and, in some respects, one of his most complete performances, ought to be in no less a place than the National Gallery, where he is very inadequately represented indeed.

Fife House, Whitehall Yard, has recently received the collection of Indian fabrics and raw materials, which has been a delight to artists in Leadenhall Street. It will be re-arranged shortly, and again open to the public on Mondays, Wednesdays and Fridays.

Our readers are aware that a Royal Commission has made its Report as to the site of the new Law Courts and the manner in which the cost of the site and buildings should be met, and that Government measures have been grounded upon their Report. Having acted upon this Report, the Treasury has now thought fit to assert that it is not worthy of credit. A Treasury Minute, dated the 16th of July, strives to prove that the Commissioners were wrong on all points. Their estimate of expenses is wrong by the small sum of half a million, while some of the funds which the Commissioners proposed to expend are not applicable for these purposes, and the actual sum which is available is less by nearly 200,000*l*. than the estimate of the Commissioners. Our attention has been drawn to this subject by some temperate and well-digested remarks of the Council of the Incorporated Law Society upon this precious Treasury Minute. It is alleged in these remarks that the facts and figures on which the Minute purports to be founded have been for many months in the possession of the Treasury; that they were well known, or readily accessible, before plans were prepared and deposited and notices given by authority of the Treasury when the Site Bill was passing as a Government measure, and when the Money Bill was before a Select Committee of the House of Commons. It may be doubted whether any great harm is done by not promulgating these views earlier, as it seems probable that, in the main, the Commissioners are right and the Treasury Minute wrong; but the fact that, having these views, they were kept back from Parliament and the country, if this should be proved, presents a subject well worthy of the attention of those who study the official morals of the nineteenth century.

The boys and girls of Sheffield have raised a statue to James Montgomery. Seven years ago the poet of 'The Pelican Island' died in the town which he had adopted and made famous for other wares than cutlery. There was much rejoicing over his genius, and many resolutions to preserve in bronze or marble some public memorial of one who in early life had been reviled and imprisoned for his service to the liberal cause. The imprison-

ment in York Castle, as is well known, made Montgomery a poet:—

We learn in suffering what we teach in song.

And it was evidently good for the rising generation of "iron" men that a protest against temporary wrong—a witness to the old truth that right will be done at last—should be set up in the public streets. The men of "complete steel" were, nevertheless, slow with their subscriptions, and the Sunday School children had to step in and make up the lists. 1,100*l*. was ultimately raised, and a statue by Mr. Ball of the prisoner of York Castle has this week been inaugurated as the first literary monument erected on the banks of the Don.

The Master and Wardens of the Ironmongers' Company gave a splendid entertainment on Wednesday last, in their venerable hall, to the promoters, contributors and friends of the great Exhibition, which excited so much admiration in May last. Few undertakings have been so successful as what now may be termed "The Ironmongers' Exhibition of 1861," or so lasting in its pleasant feeling, as the expressions of obligation and continued readiness to co-operate on both sides fully proved.

Thanks to an order of the House of Lords, on a motion of Lord St. Leonards, Turner's Will and the various codicils attached to it have been printed *in extenso*. The document is of interest to artists, who may see therein how it happened that the provision Turner made for the poor members of their profession was of no avail to them, and why "Turner's gift" has fallen to somebody else. The immediate occasion of this publication was the official representation to the Trustees of the National Gallery to Her Majesty's Treasury, respecting the care and custody of the pictures. The period within which provision was to be made, under the will, for the gallery to be named after the testator was limited to ten years after his decease. This will shortly expire, and although the decree of Vice Chancellor Kindersley delivered the pictures to the Trustees without express reference to this condition of time, there are, say the Trustees, grave doubts, supported by high legal authority, whether that condition does not still bind them to erect the gallery on pain of forfeiture. It is added, that, whatever be the legal effect of this decree, there is no doubt of the moral obligation under which the Trustees lie. They think Turner intended that his pictures should be exhibited in immediate proximity to the other pictures forming the National Gallery, and in order that they may be enabled to carry out this intention, they appeal to their Lordships of the Treasury, adding that, whether they hold the pictures under the will or the decree, or both, there is no doubt of their being under a moral as well as legal obligation to see the undoubted wishes of the testator fulfilled. It is urged, that it is not fitting to impair the completeness of the general collection of national pictures by the severance from it of such surpassing examples of the British School. To this is added a reminder that on repeated occasions the temporary character of the present location of the Turner pictures has been made the subject of express acknowledgment and assurance. The representation concludes by calling attention to the report of the late Mr. Braidwood on the increased danger of lighting public buildings with gas, under the influence of which the British Museum Trustees decided against lighting that building. The Trustees state that they would not consider their responsibility met were they not to draw the attention of their Lordships to the questionable nature of the present location of the Turner pictures, and the arrangements under which they are now exhibited by gaslight.

Messrs. Oliver & Boyd, of Edinburgh, have purchased the copyright and stock of the *Edinburgh Medical Journal* for 850*l*. The *Medical Journal* is the only one in Edinburgh.

We print the following as we receive it, by way of hint to Mr. Murray:—

"London, July.

"Is there anything like a guide-book for the home county of Sussex which has a decent claim to accuracy? I am one of those who go about the

country with a knapsack for my recreation in the holidays, and was properly brought up with an English veneration for Mr. Murray and his Handbooks. I hailed with gratitude some years since the appearance of one professing to give an account of the ancient kingdom of Ælla and its belongings, and quite recently took a tramp over the downs to Old Shoreham, not a little elated by the idea of finding such an example of Norman architecture as the following quotation from 'Murray's Handbook for Kent and Sussex,' page 293, col. 2, describes:—'*Old Shoreham Church, N. (Norman), is scarcely less interesting. It is cruciform, the 4 limbs being of equal length.*' Then follows a quotation from Hussey, and the compiler resumes thus:—'*Remark the peculiar oblong window in the S. transept, with its exterior zig-zag bordering.*' Now, I was rather surprised to find such a mistake, or sign of carelessness, as this, concerning a building within two hours' steam of London; for the truth is, that the four limbs of this church are by no means equal, but its chancel is shorter by some feet than the nave, and the transepts, of equal length, are shorter very considerably than either nave or chancel. In short, there is no great peculiarity in this respect to be seen. As to the 'peculiar oblong window in the S. transept,' I found also another in the north transept—an unexpected treat. At Lancing I was shown, by a person apparently well informed, a third blunder, respecting the three grades of scholars admitted to St. Nicholas College there, which suggests, at least, a transposition of the names of Shoreham and Lancing. If Old Shoreham Church had been an out-of-the-way edifice, I should not have troubled you with this note, but it is spoken of in the Introduction, page 12, as amongst the most important Norman works in the county of Sussex.

S."

A small volume, a Correspondence between Voltaire and the Duchess of Saxe-Gotha, has just appeared at Paris (Didier). Besides his letters, the volume is said to contain several articles by the famous author, not printed till now. The Duchess remained his sincere friend during his quarrel with Frederick the Great; it was by her desire that he wrote his 'Annals of the (German-Roman) Empire.' In the letter which accompanies the completed work he writes to her, "All is done, and I place about ten centuries at your feet, where I would rather be placed myself. Of all the blunders which have been committed since the days of King Dagobert, none is as great as mine when I left the Thuringian paradise."

BRITISH INSTITUTION, Pall Mall.—THE GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN daily from Ten to Six. Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Secretary.

HOLMAN HUNT'S GREAT PICTURE.—THE EXHIBITION of Holman Hunt's celebrated Picture of 'THE FINDING of the SAVIOUR in the TEMPLE,' begun in Jerusalem in 1854, and completed in 1860, is NOW OPEN at the GERMAN GALLERY, 108, New Bond Street, from Twelve to Six.—Admission, 1s.

SCIENCE

MEDICAL BOOKS.

The Forms, Complications, Causes, Prevention and Treatment of Consumption and Bronchitis. By James Copland, M.D. (Longman & Co.).—Dr. Copland has here not only presented the profession with the articles 'Consumption' and 'Bronchitis' in his comprehensive 'Medical Dictionary,' but he has used these articles as the basis of an extended treatise on these subjects. Numerous as are the works devoted to the subject of consumption, we know of none that will more repay the perusal, by the practitioner in medicine, than the one here given by Dr. Copland. There is a comprehensive grasp of the whole subject that reminds us of the best monographs of the great medical writers of the seventeenth and eighteenth centuries; whilst the literature of the subject is brought up to the present day. In addition to this, we have indications on every page of the practical man, who is thoroughly acquainted with the subject on which he writes. In an age of new and dazzling discoveries, the young practitioner is constantly liable to neglect the past; and the study of works like this by

Dr. Copland cannot but have a beneficial effect. The treatise on 'Bronchitis' is almost entirely rewritten, and is a most able *résumé* of all that is known of the pathology and treatment of this disease.

A Treatise on Fever. By Robert D. Lyons, K.C.C. (Longman & Co.).—Dr. Lyons is precisely the man to whom we should have looked for a sound philosophical and practical treatise on Fever. As pathologist-in-chief to the British Army in the Crimea, he had especial opportunities of investigating the fevers which carried off so large a proportion of both French and English armies. He also personally investigated the yellow fever of Lisbon in 1857. He was educated in Dublin, and now practises in Dublin, the principal city of the country which has the unenviable reputation of being the "chief habitat" of that most destructive of all fevers—typhus fever. Under these circumstances, Dr. Lyons has had ample opportunity for studying the three great forms of fever recognized by pathologists at the present day; and in his treatment of this great subject we have not been disappointed. Those already acquainted with the forms of fever will be glad to go over the ground with so competent a guide as Dr. Lyons; whilst the student of medicine will find this work a capital introduction to the study of the most formidable group of diseases he is called upon to investigate.

The History of Medicine. By Edward Meryon, M.D. (Longman & Co.).—It has been long a reproach to the literature of medicine in England, that it has neither good biographies of medical men, nor a readable history of medicine. Dr. Meryon has come forward to supply the latter, and has now published a first volume. This volume takes us from the earliest condition of the healing art, and its first philosophical development in the works of Hippocrates down to the history of medicine and surgery in England during the sixteenth century. In the execution of his book Dr. Meryon displays an extensive erudition, and has produced a work which will be alike interesting to the public and the medical profession.

A Medical Handbook. By Frederic W. Headland, M.D. (Seeley).—Dr. Headland's book is divided into two parts. One on the Preservation of Health and the other on the Restoration of Health. Both parts are written with equal ability, and both, we believe, with an equal solicitude to make the author's knowledge useful to mankind. At the same time, we question the propriety of teaching the public therapeutics at all. Our social arrangements ought everywhere to admit of the existence of a competently instructed medical man, who should be sent for where disease is present. If, however, there are districts in "happy England" where no doctor is to be found, and where a clergyman, or a visitor of the poor exists, then these "hints" on the administration of decoctions, pills and tinctures may be of service.

A Treatise on Diseases of the Joints. By R. Barwell, F.R.C.S. (Churchill).—It is now many years since Sir Benjamin Brodie published his work on 'Diseases of the Joints,' and that eminent surgeon would be the first to admit that the time had come for a new work on the subject. Those who will take up Mr. Barwell's volume and compare it with the work of thirty years since will see at once the immense stride that has been made in our knowledge of the minute structure of the bones, cartilages and other tissues that enter into the composition of the joints. It is from this point of view that Mr. Barwell's book will be studied with interest by the young surgeon. The older practitioner will perhaps question whether all this minute investigation with the microscope has really improved the practical treatment of disease, and unfortunately, there is no way of meeting the objection at once. The application of counting to the results of treatment, has yet to be accomplished by the members of the medical profession, and, until this system is put on a satisfactory basis, an opinionative medicine and surgery must prevail. There is, however, a permanent faith among all the better instructed practitioners of the healing art, that the greater the knowledge possessed of the structure, functions and morbid changes of a part, the more chance there is that those means will be

used by which disease is resolved into health, and health maintained. It is with this conviction that Mr. Barwell writes,—not, as he tells us, "so much from love for that sort of work, as from a perception that certain links must be supplied, certain entanglements unravelled, and error, if any existed, corrected." From a young man with such a spirit as this, the greyheads of the profession may learn, and the book which he has produced is one calculated to do good, as much in the spirit in which it is written as in the new and important matter it supplies.

FINE ARTS

THE SYSTEM OF TRAINING UNDER THE DEPARTMENT OF SCIENCE AND ART, AS PURSUED AT SOUTH KENSINGTON.

THE Department of Science and Art has had now some years of trial, overcoming many obstacles and prejudices, and it is time we looked to the result of the talent, energy and money that have been expended. Before entering into detail, we may dissipate the popular error that the Museum and the Schools of the Department at South Kensington have any needful connexion with one another. The fact is, that beyond some small collections for the use of the pupils, the Museum and picture-galleries might as well be at Trafalgar Square, the Minories, or Bloomsbury, as in Brompton. The Secretary of the Science and Art Department, Mr. Cole, is also General Superintendent of the Museum; but there is no compulsory union of the offices. To put the right man in the right place has been the object of the Government. The Museum section of his duties was publicly examined before a Commons Committee last year, and a very favourable verdict returned,—indeed, it would have been strange if the erection of so complete a collection in so short a time and at so small an expense had not won a much warmer approval than was tardily given to the man whose energy had so greatly contributed to bring it together.

We shall confine ourselves to the Art Department. The system of instruction diffused by eighty-two schools throughout the country has for its centre the Training School at South Kensington, the primary purpose of which is to supply teachers to Art-Schools. The students who enter it for training are principally selected from those who have distinguished themselves in the branch (metropolitan or provincial) schools. The admission to the Training School, therefore, becomes an object of ambition to the students in general. Prize-students and pupil-teachers are eligible for such admission; and this portion of the system has the advantage of leading to the extension of elementary teaching in parochial schools by means of the pupil-teachers, who are required to undertake that as part of their duties. Not only are the pupils thus made into masters, but they have a proper training in the practice of the art of teaching itself,—a preliminary course, with this special object, is gone through at South Kensington. The Metropolitan District Schools, seven in number, afford fields for the exercise of these students in training, of course in a subordinate capacity. Another means of practical teaching is afforded by the parochial schools of London, which, without any cost to the State, by the fees received, not only pay the salary of the master who superintends, but leave a surplus to the Department. Thus, the children of the poor obtain the services of highly-trained masters at no cost whatever to the State. Mr. R. Burchett's (the Head-Master) Report, speaking of the students in training, says: "This course of instruction is divided into six groups of studies, to each of which a certificate of competency is attached; and the acquirement of this certificate is the ordinary conclusion of the studies of each student in that particular group, although it is usual for the pupils to study at least in two groups at one time. It frequently follows, therefore, that students are more proficient than their certificates represent, as the more advanced Art-studies commence with the student's entry into the school, while the examina-

tion upon them cannot take place until the more elementary certificates are obtained."

These six groups may be particularized thus:—1st. Elementary drawing and colouring. 2nd. Painting, with examinations in styles of Art, and the elementary principles of ornament. 3rd. The figure drawn and painted, with examination in the historic styles of ornament. 4th. Modelling ornament, with examination in styles of Art, and in the elementary principles of ornament. 5th. Modelling the figure, with examination in the historic styles of ornament. 6th. Technical instruction. By obtaining a certificate in each of these groups, the annual sum of 10*l.* is made payable to the master in aid of his income,—the maximum sum for each individual being 50*l.* a year. The obtaining of these certificates has been found to facilitate getting employment by teachers in general, because, naturally enough, employers feel some confidence in the acquirements of persons so instructed and taught to teach.

Thus far upon the skeleton of the system; now for its muscular and locomotive parts. What is meant by a training in any of the six groups, and by what process the instruction is given, may be best stated thus, beginning from the first day of a tyro's introduction. The student, presuming his entire ignorance (otherwise, the in-comer is taken at the point he proves himself to have attained before entering), is set to draw from the flat simple geometrical forms, then outlines of natural foliage or rudimentary ornament. Some advance made in these matters, a course of practice from what the Department styles "models" is introduced,—collaterally and ultimately superseding the first, as progress is made. These models, which, by the way, are admirably calculated for students who have no facilities for obtaining instruction to practise from in private, are purchasable by the public; they consist of block cubes, or other simple geometrical forms, that can be disposed in any position and drawn from by way of training the eye, not alone in form but in the knowledge of light and shade. The practice of shading, or representing form by light and shadow, follows this,—primarily from the flat, then from the models, which, indeed, from the very beginning, have been gradually opening the pupil's eyes. All this time the instruction is intermixed by discourses upon practical geometry and perspective, delivered upon a system highly calculated to rouse the student's attention and interested zest in his work. As an example of this, and to point out the intelligent and thoughtful nature of the school's action, we may state, that before the assembled tyros a master demonstrates upon a black board the simple rules of perspective and geometry, questioning his audience as to their comprehension of the matter in hand; their replies readily guide him to direct further questions, or explanations, as required. When the practice of free-hand drawing comes into operation, which next follows this, or in some cases is carried on simultaneously with it, the teacher acts in a somewhat similar manner. Suppose a dog couchant is the example; he develops its main bearings, so to speak, step by step, from one given point,—as the eye; hence to the shoulder one line correctly delineated gives a new base for the paws and back, hence the hind-quarters and legs. Following him, the student produces the same on paper, which is examined before further progress; a series of axes for each portion of the subject being obtained, the master fills in the outline, demonstrating its character as he goes on, followed by the pupil as before. The pupil must be dull indeed, if he does not get something like an intelligent comprehension of what he is about from this method of instruction, which was, we believe, introduced by the present head-master, Mr. Burchett. Copies of a higher grade succeed the rudimentary ones, still keeping to the flat originals, excepting with regard to the models. In due time the subjects are changed to objects in low relief, and progressively to the round itself, in casts or nature. Before the certificate can be obtained, the pupil must be able to produce drawings, ten in number, of various characters, indicated above; he must make, in a given time, a drawing from a group of models, be prepared to instruct a class such as that of which

he formed a part, and solve, in writing, questions in geometry, perspective, orthographic projection, and the rudiments of constructive architecture. It will be seen that this alone involves an amount of knowledge rarely, if ever, possessed by the drawing-master proper.

Group 2, for the student in training, succeeds. Here the practice of colour is inculcated. In proceeding further, we shall probably best indicate what the studies are, by quoting some of the questions put in examination of the pupil, before he again proceeds. In group 2, the following were satisfactorily answered the year before last:—2. *State what union of primaries form the various secondary colours.* 3. *Name six mineral and four vegetable pigments used in painting, and give any information you possess concerning them.* Six works are required for the certificate for the second group: a composition of still-life painted in oil; a landscape in oil, from nature, or an approved example; a painting of ornament in monochrome, in oil; study, in water, of flowers from nature; a sheet, of at least two studies of ornamental arrangements in colour; a sheet of studies of some plant or plants botanically analyzed, with a view to ornamental details. By way of enabling the student to accomplish the last of his tasks, there is attached to the Training School a lecturer on Botany, whose duty it is to elucidate the natural structure of plants, so that their elementary forms may be understood. As human anatomy is useful to the draughtsman of the human figure, and essential to its intelligent representation, so the anatomy of plants should be studied in ornamental design. It is difficult to demonstrate in words the excellence of this part of the system.

Group 3. demands a comprehensive knowledge of the human figure, which must be drawn and painted—a tolerably fundamental acquaintance with anatomy, obtainable from a course of lectures delivered to the students by Mr. J. Marshall, twice in the year. Seven works are demanded from the student: comprising, a study in chalk from the living model, the bones and muscles placed within the outline of an antique figure; a painting from the human figure from a picture in oil; the same from the nude, or the draped figure; a sheet of varied studies of historic styles of ornament, sketched from works in the Museum, the authorities being appended, the sketches to be coloured when the originals are so. Questions answered in examination for the certificate in this group were, as before,—1. *What are the characteristics of Greek Art!*—2. *Give examples of its three periods.*—3.—4. *What are the characteristics of Northern and Italian Gothic!*—6. *Had this (the Renaissance) any influence on the Mohammedan styles!* With group 4, the necessity of original design is introduced, for which the foregoing groups are preparatory. Its application is chiefly to sculptural art. The student has to produce five works, models of ornament from the cast and from a drawing, i. e., producing faithful relief from a flat surface, reversing the ordinary process; models of flowers or foliage from nature; time-sketches, in clay; and studies of historic styles of ornament, drawn, restored or modelled.

Group 5. carries the student into modelling the figure, &c.; the questions for examination imply a knowledge of human anatomy and the history of ornament in various styles and periods. Six works have to be produced:—a shaded antique figure, drawn from the cast; an anatomical rendering of the same, modelled; a drawing of the skeleton in the position of the same; a model of the same; a sheet of varied studies of the relief ornament of various historic styles, from examples in the Museum; and other tests of acquirements. With group 6. the remaining tests apply to specialities of application, as to architectural, engineering, naval or mechanical drawing. Candidates for a special certificate on ornament are required to send in, for permission to compete, two original works, painted or modelled, to show their technical skill, as well as their power of designing; also, a monograph, drawn up by themselves, on at least two historic styles, illustrated by sketches from works in the Museum. They are examined, by papers, on the elements, history and application of orna-

ment, and are required to design some works in the presence of the examiners. A student, presumably competent, may take up any group as his special requirement suggests. Of course, a mechanical draughtsman need not learn human anatomy or botany. Various rewards are given to proficient according to attainment, either in medals, honourable mention, instruments of use in art, books, &c. The students, qualified by this course, obtain, as vacancies occur, masterships in provincial schools or are eligible for employment in design. The result of all this may be seen in the fact stated by the Report, that nearly 85,000 persons received instruction in drawing in 1860 in the various schools, increasing from 29,498 in 1855. The exhibitions of the pupils' works are not only honourable to them, but testify highly to the intelligent system which has fostered their skill.

FINE-ART GOSSIP.—On Tuesday last Mr. James Sant was elected an Associate of the Royal Academy.

Messrs. Hamilton & Adams, of London, and Mr. J. A. Rowbotham, of Derby, publish an illustrated version of the well-known legend of the 'Mouse-Tower on the Rhine,' which relates the villany of a certain Bishop Hatto. The illustrations, by Mr. V. H. Darwin, are very poor.

The Twelfth Report of the Commissioners on the Fine Arts says, the annual grants for decorating the New Palace have sufficed to meet the claims of the artists. In that of Mr. Dyce, however, a different result has been experienced. This artist, by the original agreement, was allowed a fixed annual sum for a limited period, within which he undertook to complete the work. Failing, from various causes, to do so, additional time was granted from the termination of the period in June 1855, which was extended to the beginning of 1858. Since 1854 Mr. Dyce has had exclusive occupation of the Queen's Robing Room granted on condition that the work should be completed in June 1857, a time since extended to the beginning of 1858. "The work is," says the Report, "to our extreme mortification, still unfinished; the delay having occasioned, as we fear, great inconvenience to your Majesty in consequence of the long-continued and still exclusive occupation of the Robing Room by Mr. Dyce. The more recent interruption has arisen, it is understood, from ill health. We have the greater reason for regretting any impediment in the completion of this work, since the portion already executed is, in our judgment, highly creditable to the artist." In noticing the comparative assiduity of artists, a high compliment is paid to Mr. Maclise for his "unremitting industry" in working on the water-glass picture of the Meeting of Wellington and Blucher after Waterloo, in one of the large compartments of the Royal Gallery. The notes compiled by Mr. Maclise during his journey of research into the practice of the above-mentioned method in Germany, together with those resulting from his own experience, are appended to this Report. Mr. Herbert has adopted, with slight modifications, the same method, to his entire satisfaction. The Commissioners are of opinion that the decorations of the "Houses" by the best artists may conduce to the credit of the artists and of the country. At the same time the largely increased encouragement given of late years by private persons to artists leads them to admit that those artists employed on the decorations could, in almost every case, be more profitably, though not more honourably, employed in other and possibly less arduous undertakings. With regard to painting, it is recommended that, for the sake of uniformity, a series of designs, or sufficiently distinct portion of such series, should be entrusted to one artist; but in relation to sculpture, the Commissioners see no such necessity, because a series of statues in any given locality may, without danger of undue incongruity of style, be allotted to different sculptors. The duration of any scheme of decoration by means of sculpture can consequently be calculated with more precision, while the undertaking itself can be kept more under control. The Commissioners believe that every object contemplated in their appointment will

be fulfilled by the employment of eminent sculptors in entire or partial execution of the schemes before submitted.

The British Photographic Portrait Gallery, Numbers III., IV., V. and VI., lie before us. Numbers I. and II. we have already noticed. Those now in question contain portraits of the Earl of Derby, Messrs. Monckton Milnes and E. Cardwell, M.P.'s; also of the Dean of St. Paul's. Each is accompanied by a short notice, mainly of dates and deeds, concerning the subjects. The first is an excellent and characteristic portrait, good enough, but not too good. The second looks heavy and lumpy, the head being a failure. The third is one of the best and most expressive likenesses we have ever seen in photography, in which a portrait is not always a likeness, we need not say. It is well composed, moreover, and is good every way. The fourth is like enough, but so bad both in production and composition that the less said about it the better. Messrs. Mason & Co. are the publishers, and Mr. Kilburn is the photographer, of this series.

By a clerical error in our notice of the Report of the Department of Science and Art last week, "Dr. Marshall" in the eighth line from top of third column (p. 123), appeared for Mr. John Marshall.

The magnificent Dome of Monreale, Sicily, is to be fitly illustrated by the Rev. D. B. Gravina, on the most magnificent scale, by eighty large imperial folio plates printed in chromo-lithography, with, as certain specimens already completed show, the greatest care and accuracy of attention to the famous mosaics of this singular building, the crown of Norman Architecture. The architectural portion will be included in these, of course. The author, who has resided for forty years in the Benedictine Monastery adjoining the Dome, has given all his attention to the work he has now nearly brought to a conclusion, and contributes a text explicatory of the symbolic meaning of the emblems of the colours, and of the sacred and profane usages and customs, as delineated in the mosaics. The plates have been partly executed by the author, partly by Sicilian artists. The proceeds are to be devoted to building a school for poor children at Maidstone. The date of the subject, about 1170, and the vast variety of its mosaics, cannot but afford a means of interesting the public, especially as we find architects turning their attention to mosaic as a means of decoration; and that there is considerable hope Sir Christopher Wren's original intention of illuminating the stark walls of St. Paul's Cathedral with such materials may soon be carried out.

MUSIC AND THE DRAMA

ROYAL ITALIAN OPERA, COVENT GARDEN.—MR. MELLON'S CONCERTS.—Mr. Alfred Mellon begs most respectfully to announce, that his Annual Series of PROMENADE CONCERTS will COMMENCE on MONDAY, August 12.—Promenade, One Shilling.

NEW PUBLICATIONS.

SERVICE MUSIC.

The Music used in the Services of the West London Synagogue of British Jews. Principally composed and edited and adapted by Charles Salaman; the Ancient Melodies harmonised and the whole arranged with Obligato Organ Accompaniments, and edited by C. C. Verrinder. Vol. I. (Addison & Co.)—This is a publication of more than common interest; not merely as adding to our knowledge of the style of music preferred for the Hebrew ritual, but because it contains compositions of to-day as well as melodies by tradition reputed to be more ancient in date than the First Temple. With some of the latter we had been made acquainted by M.M. De Sola and Aguilar's collection of Portuguese Synagogue music. When examining that valuable work, the symmetry of some among the ancient tunes struck us as remarkable; there being no peculiarities of form or interval to distinguish them from such sacred airs as a Mozart or a Mendelssohn might write for the uses of the temple belonging to any creed. The austere dryness of the Greek modes, turned to account by the early Christians, would seem to have small orthodoxy or authority

among the Hebrews. We understand that this book is published with "sanction," and if so, it is equivalent to a confession that beauty of form and melody—be it ever so stately, never aesthetically repulsive—is not only permitted but sought for by those of the old faith. This is to be seen in the contributions of Mr. C. Salaman,—of that excellent amateur Mr. S. Waley and of Mr. E. Hart. Some of those by the first-mentioned writer are almost secular in the turn of their melody—without, however, being chargeable with frivolity. We have always held with those who allow Music in worship to avail itself of the materials of its time; and this on principle no less than on tradition. There is direct injunction that "everything" is to take part in prayer and praise,—and those who limit the language of adoration to this or the other century, voluntarily imprison themselves within the sepulchral walls of a ruin, instead of "devoutly pressing" into the building which Piety rears to-day for living beings to beautify, and in which living beings may find their spirits chastened, or softened, or exalted. The words of Holy Writ are not exclusive in their obsolescence:—it may be asserted that there has been little or no nervous writing in any style of any period since the translation was made for England, in which it may not be traced that our writers are conversant with the phraseology of the Bible. This universal adaptability in nowise implies misuse or confusion—it simply displays a treasury of alient and suggestion which are of all time, and have nothing to do with the momentary fashions of an epoch, save by throwing into these something of that nobility and grandeur which will belong to high purposes and unselfish thoughts, so long as human hearts beat,—so long as some will repair to the Temple to worship and others to sell doves and to change money. But we must not be further beguiled into a subject too wide and too deep to be treated here; our reasons for thinking highly of this Jewish music, we conceive, having been sufficiently indicated in the above remarks and speculations.

How different from the foregoing work of service-music is the one before us—*Benediction Service, with Thirty-six Litanies*, by W. Schulthes (Ewer & Co.).—Here we have the allurement, and the gilding, and the colour, and the incense, and the flowers of a Jesuit chapel (the taste of that religious order in church decoration being well known).—So be it, for those who find in these things devotional suggestion; provided the gilding be good, the colour gorgeous, the incense unadulterated, and the flowers richer than the pale, pinched blossoms which grow in some Campo Santo. The usual elegance of M. Schulthes as a writer has not forsaken him; but much of his work seems to us too slight, even tried by the Catholic standard, which, we believe, is the true standard of religious Art. To illustrate Signor Rossini's 'Stabat' is not alight; neither Mendelssohn's 'Lauda Sion': though neither is, in one single bar, "strict."

The Chorale Book, &c., by H. H. Bemrose and W. Adlington (Wertheim & Co.), is one of the concerted productions of which modern time has produced too many. We cannot understand that any new collection of the kind can be wanted; and the prefatory editor is apparently aware of the fact, since he launches out into a paradox which, once for all, is to be combated. Says he, "It may be remarked, that the first impression of a tune is not always correct. There is sometimes a quaintness and apparent insipidity, especially in certain tunes, towards which on further acquaintance a strong attachment succeeds." By way of rejoinder, may be put in Mendelssohn's true saying,—"It is astonishing how one can become used to bad music." A tune that makes no first impression is no tune, but an arrangement of notes, that makes its way by favour, or association, or persistence.—Many of the Psalm tunes here collected (why "*Chorales*") are uninteresting, and not good, if considered in reference to the words of Tate and Brady. The German specimens, we are instructed, have been "docked" (*vide* 'Brandenburg', p. 156). It may be submitted, that we are rich enough to have dispensed with such mutilation of foreign wares. But there is a disease epidemic, it would seem, among Psalm-

odists as among potatoes, and here is the hundredth proof of it—one which, whether the last example comes from America or (as here) from Derby, must be denounced by all who desire to have the music of public worship in English decorously presented and performed.

ROYAL ITALIAN OPERA.—Superlatives in play-bills are not always words of wisdom or signs of health. Why call the cast of 'Il Barbiere,' on Saturday night, "unprecedented"? Why force honest people to declare that the new Rosina is not so good as Malibran, Viardot, Sontag, Madame Grisi, and half a score of her predecessors less famous than they? Why must we remind Mr. Gye that there has been a *Bartolo* whose name was Lablache!—He is doing his best by such proceedings to prejudice "the town" against the new artists; and if the public becomes as unjustly cold as for the moment it is irrationally warm, he will only have himself to thank, as having provoked comparison by trying to exaggerate success. Mdle. Patti cannot by any strain of epithet be justly called "unprecedented" as a singer. For voice she is not to be compared with half-a-hundred *soprani* who have gone before her; in execution (trying her by the time during which she has sung on the stage) she is ready, it is true, but not so perfect as others have been in her circumstances. Those who remember Mdle. Pauline Garcia's first appearance as *Desdemona* must confirm this assertion. Mdle. Patti's *Rosina* is, like every part she has sung here, musically and cleverly finished up to a certain point. Her changes were exuberant, some out of style. The reader need not be told that we enjoy and defend ornament in singing; but then it must be well applied and perfectly wrought out.† In the latter part of the *cabaletta* to 'Una voce' the new *Rosina* fairly ran riot, too frequently to the destruction of the measure of the movement;—towards the close especially, heaping group on group of notes, the one having little or no affinity with the other, and retarding, not enhancing the brilliancy with which the movement winds up. Then not a few of the passages were "dashed at," not done. The *staccato* portions were the best;—but neither were the shakes nor the scales so neat as a singer so gratuitously ambitious is bound to make them. We must add that some were in questionable tune. The duet was better in every point of view. The *finale* was weak and the *stretto* was "behaved," not sung. It is true that the whirling brilliancy of the orchestra leaves the *soprano* small chance; but the *Rosina*, if she does not dominate, should and can be heard;—so judiciously has the master placed her voice. The Lesson scene was a mistake: *Rosina* there introduced a *bravura*, in the Gipsy style, by Mr. Wallace, to English words, which were not to be heard. On the whole, Saturday's singing gave us an impression of a more venturesome spirit in Mdle. Patti than we had hoped she would show. She may lose her public, unless she

† The question is dwelt on, not by chance, but because it is exciting attention in more places than one just now. We spoke some short time ago of a lesson on *Agatha's* air from 'Der Freischütz,' by M. Stephen de La Madeleine, and offered a judgment on his doings thereof. The lesson has brewed a pretty quarrel in France. To those who hold with us he replies that Sontag and Schroeder-Devrient (countrywomen of Weber's, who had his tradition) used to embroider the *adagio* as he has stated. Our distinct recollections (the same as have printed in the mind Madame Pasta's cadences in 'Ombra adorata,' and in the "Niobe" rondo of both German ladies in Weber's well known scene are of its delivery by them without the graces and *gruppetti* introduced by him. But, after all, the musician must decide for itself. We cannot fancy Mozart's 'Dove sono' sung twice without some enhancement, delicate and well considered, of the few simple notes of the theme on its repetition. We cannot conceive *Agatha's* evening song otherwise than spoilt save by, possibly, a most sparing use of *appoggiatura* in the second verse.—With Signor Rossini's music the case is entirely different. His Italian operas are so many reveals for the voice, so many temptations calculated for the singer to show his craft and his compass therein,—yet even in these it seems to us clearly pointed out by the structure of the music where this can be welcomed, where it is forbidden. One may change the airs and graces of *Rosina's* vivacity (if one can change them well), but who would dare to alter the passionate flourishes of *Desdemona's* delicious *bravura* in the second act of 'Otello,' or those in the murder duet of the third act? It is because style in ornament is so universally neglected that we have so perpetually to complain of disproportion—misapplications of this severe music tawdrily pranked out—of that tempting melody puritanically starved.

is counselled wisely: clever though she be, far beyond the average cleverness of singers of her age. Her acting was pretty, with a touch in it of malice and sarcasm, analogous to that air of *finelady* languor and impertinence which pleased us in 'Martha.' At present, we conceive her *forte* to be comedy: and, if "a bespeak" could make itself heard, she should be tried (as was last week said) in 'Susanna.' Signor Ciampi improves, and has expunged one or two of the minor-theatre tricks, which in his first performances of *Bartolo* made us question his possession of any real mirth.

The season, one of unusual bustle, profit, and reserve in attempting new music, will close to-night by a performance of 'Le Prophète.' Mr. Gye has failed to make that opera popular with Mdlle. Csillag. We cannot but fear the same result, with Madame Nantier-Didiée: though there cannot be two opinions as to the vocal powers and requisites of the two ladies. The latter has hitherto lost herself when she has forgotten that she is a first-rate singer and a pleasing actress—of the second class.

MUSICAL AND DRAMATIC GOSSIP.—The programme in detail of the Birmingham Festival is before us. The works selected for performance have been already mentioned, and the names of the singers, whose labours seem to be fairly apportioned to them, on the whole. There is not a solitary piece of music which is not well known. We have no doubt that the Directors have weighed their reasons for departing from that course of enterprise which during so many past Festivals has given Birmingham an European pre-eminence; but that the interest of the meeting is thereby largely reduced with some of us, there can be no question. To hear how Mdlle. Tietjens "gets on" in Oratorio, and how Mdlle. Patti will succeed in "Let the bright Seraphim," offers small compensation for the absence of some new or unfamiliar work of importance. It is vexatious, if it be true, that no Oratorio by a living writer is worth risking; but surely there must be sacred and service music worth reviving by the great masters whose name and fame are taken for granted.

It is not very often that we get musical news from Australia; but the dwellers in that far new world, it appears, are "buckling to," and occupying themselves with Art in a sensible fashion. We have a concert-bill of the first performance of the second season of their "Musical Union," held on the 22nd of May, at which Mendelssohn's 'Wald-purgis Night' and Mr. Henry Leslie's 'Judith' were played and sung by an orchestra of fifty-two and a chorus of one hundred executants.

Our instrumentalists appear determined to take no holiday this year, since Mr. Mellon announces that his Promenade Concerts will commence at the Royal Italian Opera House on the day so dear to the sportsman, the twelfth of this month.

The five prizes of the Brass Band "Sydenham contest" were awarded as follows:—First prize to Messrs. Marriner's Band (of Keighley); second ditto to the Victoria Amateurs; third ditto to the 15th Durham (also known as the Darlington Band); fourth ditto to the Albion Band; and the fifth and last ditto to the Stanhope Band.

A concert given at Scarborough, on the 25th ult. is worth a word among the curiosities of the year. Mr. Sims Reeves was to have appeared there; but on his arrival, it became evident that he could not sing;—on which the management prevailed "on Mrs. Howard Paul to appear in his stead, and give her wonderful impersonation of Mr. Reeves, and sing the songs set down for him in the programme." This is pressing of jest into earnest service with a vengeance!—That Mrs. Paul was made for better things than such masquerading, all who remember Miss Featherstone's superb voice and remarkable promise of stage excellence must know. The feat is not a new one. Years ago a fortune was made by a man who gave concerts on the Continent, dressed as a woman, who called himself "The Male Catalani."

Now is the time when Autumn projects are born. We hear of a plan at Manchester of giving twenty weekly orchestral and choral concerts in

the Free Trade Hall there, directed by M. C. Halle, on the scale of the former remarkable performances under the same conductorship, which excited so much attention.

Once a month comes a rumour of some new joint-stock company, meant to out-do every existing establishment by some exhibition of unparalleled excellence. The liability is always "limited"; so, we are glad to believe, has the confidence of speculators become in these latter days. Among the newest reports has been one of a monster concert-room which is to be raised close to the Kensington Exhibition building, for the purpose of giving monster concerts during the season of 1862. It has been said that the moving parties in the scheme are those who were to do such great things in the foundation of "the Handel College." What was observed respecting the new English Opera speculation a fortnight since might be here repeated *sforzando* (as the musicians say), were there the most remote chance of any such project getting beyond the stage of application to the credulous, and finding even them rather hard of hearing.

Miss Adelaide Phillips, an American *contralto*, of whom report speaks highly, is now, we are told, in Europe, to complete her studies.

Among other watering-place pleasures is to be a new operetta, 'Les Roses de M. de Malaherbes,' in one act, by M. Jules Beer, nephew to M. Meyerbeer, which is to be produced at Spa.

M. Roger (French journals announce) is going to Russia; some state on a five years' engagement, at an enormous salary. Should the latter news prove true, we are sincerely glad to think that this once charming artist may there refresh his fortunes, if Report has spoken the truth in respect to them; but we cannot join in lamentation over the departure of one to hear and see whom, of late time, has been more painful than pleasant. Meanwhile, he has been singing, for a few evenings, in the scene of his first and most real triumphs, the *Opéra Comique*. The concerns of this theatre, once so fortunate, are, we are assured, in a condition anything rather than flourishing.—Madame Cabel returns to her right place, that of florid singer at the new *Théâtre Lyrique*.—At the examination of the pupils of the *Conservatoire* the other day, two are announced as having distinguished themselves greatly—Mdlle. Cico, a brilliant *soprano*, and M. Caron, a *baritone*.—M. Faure will enter on his duties at the *Grand Opéra* in 'Guillaume Tell.'

A Symphony, by Mynheer W. E. Thooft, is said to be producing some sensation in Holland. It is entitled 'Charles the Fifth,' and would seem to be more of a *cantata* than a symphony—voices being used throughout, so far as we can understand the description.

Herr R. Marggraff, in his recently published 'Grossdeutsches Liederbuch,' attributes the excellent popular song 'Das Lied von den Deutschen Strömen,' to Max von Schenkendorf, the third of those patriotic poets (Arndt and Theodor Körner being the other two) who roused the Germans in their great national struggles during the second decennium of this century. The *Allgemeine Zeitung*, in noticing Herr Marggraff's book, doubts whether the above-mentioned song is by Schenkendorf, as it is neither to be found in the first edition of Schenkendorf's Poems (Stuttgart, 1815), nor in the last complete edition of the poet's works (Berlin, 1837). We wonder that the *Allgemeine Zeitung*, in thus expressing a well-founded doubt, is not aware of the name of the real author of the song. It is by Karl Buchner, of Darmstadt, and, after having appeared for a long time, in students' and other song-books, under Schenkendorf's name, has at last been acknowledged to be Buchner's by the late Gustav Schwab, in the Preface to the third edition of his 'Fünf Bücher deutscher Lieder und Gedichte' (Leipzig, 1848).

MISCELLANEA

Whales and Whaling.—I have read with great interest the paper in your last number, by Prof. Owen, relative to a National Museum of Natural

History, and more particularly that part referring to the Right Whale, and the desirability of preserving a specimen of that greatest of the Mammalia before the species becomes extinct. Speaking of the Right Whale, Prof. Owen remarks, that it is confined to the seas of the Northern Hemisphere, observing that the peculiar nature of its food restricts it to high northern latitudes, and that "here only is there now the chance of seeing the spouting of the Right Whale." I trust I shall not be considered presumptuous in venturing to offer a few remarks which may seem opposed to so distinguished an authority upon the subject, but I know from my own observation that the Right Whale visits the shores of Australia, Van Diemen's Land, and New Zealand, in considerable numbers, during the summer months; and in good seasons is (or was, at the time I was there) largely captured both by vessels and by shore whaling parties. I have known as many as eight large Right Whales taken off Twofold Bay (about lat. 37° 6' S.; lon. 149° 57' E.) in one day; these whales being in every respect similar to those taken in the Northern Seas, the true whalebone whale. Besides the Right Whale, another and smaller kind, called by whalers the "Humpback," is frequently taken; but this differs from the Right Whale in many important particulars. The belly, and under the throat, is pure white, and gathered into longitudinal folds; it has a small back fin, near the tail; the head is sharper, the tail more pointed, and altogether it is more active than the Right Whale, which has no back fin, and is equally smooth all over, being generally all black, though it is sometimes beautifully mottled, black and white; these are called Magpie Whales, and are thought to have thicker blubber than the others. With reference to the term "spouting," I may observe that the whale never really spouts water from the head in the manner generally represented; the air, as it rushes up through the blow-holes, takes up a portion of water, which is blown up like a jet of steam; the only fluid ever spouted from the head is blood, when the animal is severely wounded internally by lancing;—this frequently rises in two great columns, and is spread by the wind in a shower over the men and boats near; he is then said by the whalers to have "his chimney a-fire." The most important natural enemy of the whale on the coast of Australia is the "killer," a large kind of porpoise, with a blunt head and large teeth. These "killers" often attack the whale, and worry it like a pack of dogs, and will sometimes kill it. The whalers regard these creatures as important allies, for when they see from the look-out that a whale has been "hove to" by them, they are pretty sure of capturing it. The killers show no fear of the boats, but will attack the whale at the same time, and if a boat is stove, which often happens, they will not hurt the men when in the water. When I wished to obtain the head of one of them, I had some difficulty in prevailing upon the men to kill one, as they said it might bring them ill-luck. The Australian natives about Twofold Bay say, the killers are the spirits of their own people, and when they see them will pretend to point out particular individuals they have known; some are very large, exceeding twenty-five feet; they blow from the head in the same manner as the whale. When a whale has been killed, it is not unusual for the killers to take it down bodily, in spite of all the efforts of the men to keep them off and tow it in. When this occurs a buoy is attached to mark the place, and after being down some twenty-four hours or longer, the carcase becomes inflated and rises to the surface, like a great balloon, generally minus the tongue, which is the favourite morsel of the killers. There is another variety of the whale—probably the largest in the world—in the Southern Seas; but I will not add more now, as I have already trespassed too much on your valuable space by what, I fear, will appear to many of your readers a very unscientific yarn.

O. W. BRIERLEY.

NEW GUIDES FOR 1861.**I. SCOTLAND.**

Just published, in a neat portable volume, price 8s. 6d. cloth,

A NEW EDITION (THE 15TH, 1861) OF

BLACK'S PICTURESQUE TOURIST OF SCOTLAND,

Containing an Account of all the Places most worthy of being Visited, the Names of the best Hotels and Inns, and other useful information; a correct Travelling Map, 22 Charts of interesting Localities, and 4 Plans of Towns. Illustrated by 9 Engravings in Steel, and 147 Woodcuts.

(From The Times, July 26, 1861.)

"With the prospect of a tour in the Highlands before us, we gladly welcome the appearance of the 15th edition of this popular and excellent handbook, which, in addition to copious illustrations of the scenery and remarkable objects which it describes, contains a clear and accurate Map, corrected to the latest date. We feel the greater pleasure in noticing this work, as we have frequently complained of the want both of reliable maps and of comprehensive guide-books for this favourite resort of tourists."

II.**SOUTH OF ENGLAND.****KENT** (Canterbury, Margate, Dover), 3s. 6d.**SUSSEX** (Hastings, Chichester, Lewes), 2s. 6d.**HAMPSHIRE and ISLE OF WIGHT**, 2s. 6d.**III.****SURREY.**

Just published, in One neat Volume, price 5s., with Map and numerous Illustrations,

BLACK'S GUIDE TO SURREY,

Including a full Description of the History, Antiquities, and Topography of the County.

(From The Athenæum, June 1, 1861.)

"To one of the most pleasant and picturesque of English Counties, this is one of the most efficient Guides that we have yet met with. It is convenient in form, correct in its information, legibly printed, and well illustrated. We could not award higher praise. It is a book, not merely for the hand or pocket of the tourist, but for his library and consultation afterwards. It has not accompanied us in travel, but, by aid of its pages, we have again gone over many a route, sat down in many a valley, ascended many a hill, tabernacled at many a hostelry, and sallied forth once more rejoicing. Next to making the tour, is the pleasure of remembering it; and this pleasure we have amply enjoyed in this volume, and are thereby all the better enabled to award it the commendation which it justly merits."

2. ADAPTED to the FRENCH. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. Eighth Edition, containing a Treatise on the Gender of French Substantives, and an additional Treatise on the French Verbs. Price 12s. cloth.

3. ADAPTED to the ITALIAN. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. Fourth Edition, price 12s. cloth.

4. ADAPTED to the SPANISH. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. Price 12s. cloth.

KEYS to the SPANISH, ITALIAN, FRENCH, and GERMAN SYSTEMS, prepared by the Author. Price 7s. each, cloth lettered.

It is necessary for those who desire to avail themselves of the present method to notice, that these are the only English Editions sanctioned by Dr. Ollendorff, and he deems any other totally inadequate for the purpose of English instruction, and for the elucidation of the method so strongly recommended by Captain Basil Hall, and other eminent writers. They should be ordered with the Publishers' name, and, to prevent errors, every copy has its number and the Author's signature.

The above Works are copyright.

London: Whittaker & Co.; and Dulau & Co.; and to be had of any Bookseller.

HAVET'S GRAMMAR OF FRENCH GRAMMARS.

New Edition, 480 8vo. pages, 7s.

THE COMPLETE FRENCH CLASS-BOOK: a Theoretical and Practical French Manual, prepared expressly for the Use of English Learners, and based upon the Works of the French Academy and the Standard Grammarians of the present day.

"M. Havet's treatise is a complete exposition of the principles and peculiarities of the French language."—*Athenæum*.

"No other book is so well calculated to make a complete French scholar as M. Havet's admirable and comprehensive work."—*English Journal of Education*.

"Havet's popular 'French Class-Book' is by far the most solid and practical production of its kind. It contains the rudiments, the usual practice, and the niceties of the language, all in one volume lucidly arranged, and set forth with an intimate knowledge of what is easy and what is difficult to English students of French."—*Continentale Review*.

HAVET'S FRENCH METHOD.

"M. Havet's system obliges the pupil to learn almost in spite of himself, his stock his memory with words and phrases belonging to our daily wants and vocations. The Conversations are most varied in matter, and range from the simplest construction to the most difficult idiom and the purest gallicism; yet the progress is so gradual, that a pupil with commonplace abilities must arrive at a good spoken knowledge of the French language."—*British Mirror*.

I.—FRENCH FOR BEGINNERS.

 John Murray, Albemarle-street.

Now ready, price 3s., Illustrated with Six Portraits, post 8vo. cloth extra.

PRISON BOOKS and their AUTHORS.

By JOHN ALFRED LANGFORD,
 Author of 'Shelley,' 'Poems of the Field and the Town,'
 'The Lamp of Life,' &c.

OPINIONS OF THE PRESS.

REVIEWER.—"This is a liberal and earnest book. The author feels that life is serious, and recognizing the sweet uses of adversity, will show how men of genius and worth have triumphed over all its pains. He is as prompt to recognize the purity of Robert Southwell, the Jesuit Martyr, as to appreciate George Wishart, the Puritan. . . . The book is handsomely printed in old-fashioned type, and adorned with some very faithful woodcut portraits, executed in a style that harmonizes with the form of print, being old-fashioned without roughness or inaccuracy, and very faithful copies from accepted likenesses. Whenever gift-books are in season such a work as this deserves to be remembered."

ARTISAN.—"The chief interest in a volume like this arises from comparing the various ways in which prison poets have treated the same theme, particularly in those dealing with dreams of liberty, and dashed fields, and messages of love to one who is not the gladder for being free. Young readers especially may find profit in making these comparisons, for the pursuit should lead them to a study of the poets generally,—our own and those of foreign lands, where there is no lack of talented minstrels."

MORNING ADVERTISER.—"A well-arranged mélange by worthies, most of whom stand in high relief in the annals of persecution, famous for their enduring patience in imprisonment. . . . Chained inmates, in fact, who sang sweetly within their prison bars. . . . The specimens of the poetry are well selected, and add considerable value to the work. The work is altogether praiseworthy."

OSWESLEY.—"If Mr. Langford continues to work as carefully and as earnestly in the collection of materials to illustrate the lives and works, as he has evidently done in this volume, he will afford a considerable amount of pleasure to a very large circle of readers."

MORNING CHRONICLE.—"The author has well carried out the excellent idea upon which his task was founded."

LONDON REVIEW.—"Mr. Langford has hit on a good subject. It was a bright idea to bring together some of the more illustrious prisoners who had beguiled the weary hours of their captivity by noble essays or beautiful poems, and to show by them how superior to circumstances is the imperishable thought—how the mind surpasses and overtops the frail and miserable body."

SUNDAY TIMES.—"He is constituted to sympathize with prison authors, for he will naturally admire the noble qualities which throw genius into the dungeon; and he will, therefore, read books written in the shadow of persecution with all his relish of the chivalry which has inspired them. As a natural consequence, his appreciation of the literary merits of the works that pass under his notice in the volume before us is exaggerated; but there is justifying so genial and sincere in his sympathies with the men that the glow and ardour of the book are by no means objectionable."

ORIENTAL BUDGET.—"Mr. Langford here gives us some graceful biographical sketches and impartial criticisms of those poets who, like caged starlings, have piped behind iron bars. The idea is a good one; and the author has carried it out with much discrimination. The notices of the various writers show a neat reading and a delicate taste;—above all, Mr. Langford is to be commended for the thorough cosmopolitan spirit in which he writes. The review of Southwell is, perhaps, the most interesting and best-written part of the production, and is quite free from either Papal or Protestant prejudice."

BIRMINGHAM JOURNAL.—"Mr. Langford's large reading and literary skill have enabled him to compose some very pleasant pictures of the men of old. The volume is not merely a compilation, but contains a good deal of original matter, as for example in the able criticisms of many of the works noticed, and in such paragraphs as those afforded in the life of Dr. Dodd for some remarks on the 'popular preachers' of our own as well as other times. The comparative freshness of his subjects, the novelty of their grouping in a class, the serious stories of the authors' lives, and the sketches and examples of some of their chief works, all judged in a generous spirit, and examined with large literary powers, have enabled Mr. Langford to give us a very excellent and readable book, which deserves and must insure success. The volume is very admirably printed in antique type and altogether well 'got up.'"

ARTISAN'S GAZETTE.—"The book will reward an attentive reading. It sketches pleasantly and lightly—though not without serious feeling and true sympathy—the chief incidents in the lives of the writers we have named; and it presents a summary of their principal works, sufficiently critical to show that the author does not speak without fair knowledge, and discriminating and critical enough to prove him honest and impartial."

CARLEIGH EXAMINER.—"The necessarily limited space at our disposal will not permit us to give other extracts from this most interesting and ably-written work, which we have marked; and we can only, therefore, refer our readers to the volume itself,—the whole of which will well repay perusal. It is embellished with excellent portraits of some of the authors depicted, and, altogether, is 'got up' in a style which fits it to take a place on any drawing-room table. We shall, indeed, be surprised if it do not prove one of the most successful books of the season."

DERRY AND CRYSTFIELD REPORTER.—"We cordially recommend this book to our readers as a safe and reliable guide on the subjects on which it treats. Its characteristical feature—its account of the most celebrated prison books—we have not time to touch upon. Suffice it to say, that much valuable information, and many beautiful selections are given, which will amply repay perusal. The book is handsomely 'got up,' and is embellished with a series of well-executed portraits."

London: William Tegg, Pancras-lane, Queen-street, Chesham.

BRITISH ARTISTS, from HOGARTH to TURNER. By WALTER THORNBURY.

This new work contains Biographical Sketches of GAINSBOROUGH, LAWRENCE, WEST, REYNOLDS, SCOTT, BLAKE, STOTHARD, MORLAND, FUSSELL, NOLLEKENS, WILSON, BARRY, CRUIKSHANK, SHERWIN, COSWAY, &c.
 London: published by Hurst & Blackett.
